Ions - contd
secondary, ang. distrib., in Ta bombardment by alkali metal ions 5=999
  negative, emission 7=6287
separation at crystallization of water 6=963
separation from plasma type media 9=5759
in solar corpuscular radn., invest. 5=1461
sputtering of various elements by Hg^+ and A^+ 7=2340
in stellar atmospheres, atomic and molecular 9=12971
suprathermal, in plasmas 9=1550-1
thermal polarization 7=494
transport in nerves, rel. to nerve metabolism 9=11675
2- and 3-electron ions, open shell calc. 8=3393
two-centres covalent, shapes 9=8758
unipolar conduction, drag pressure generation 9=8265
visualization of tracks in metastable polar solutions 8=1800
X-ray scattering factors, for spherical and aspherical charge distrib. 9=5100
between Z = 3 and Z = 10, range—energy rel., air and emulsions 6=2194
A, in A gas, cross-section and charge anal. 6=5986
  formation cross-sections 9=8261
  large-angle scatt. by A atoms 5=6232
A^+, in A and No, scattering 9=7408
  from air, bombard. by H^+ and H_2^+ 9=11153
A^{40}, scattering with charge exchange by A atoms 9=3966
Al^{3+}, Hartree—Fock energy 9=5105
alkali halide complex ions, gaseous, and $K(H_2O)^+$, dissociation energies 9=6217
alkali metals, pos. and neg., detect. with Li ion microscope [5=2799
Be to Ne, range and spec. ionization 8=7136
Br^-, absorption cross-section and charge reversal in gases 9=5817
  collision cross-section in argon 9=5816
C, cross-section in plasma 5=4694
C^+, passage through Ag foil 7=9731
  2-electron capture by collisions in gases 7=2365
C^{12}, elastic scattering from Au 9=3907
CN^-, adsorption on Pt, Ni and Ag 8=4509
CO, dissociation by collision 8=4087
CO^+, CO_2^+, CH^+, CH_2^+, dissociation in molec. collisions [6=6745
Cl, recoil, from A^{37} K-capt., charge distrib. 5=8182
Cl^-, absorption cross-section and charge reversal in gases 9=5817
  collision cross-section in Ne, N_2 and A 9=5816
  detachment of electrons 6=4469
  polarizability calc. 5=1130
Cl_2^+, charge-transfer transition 9=11532
Cs, 4keV, penetration of Ge 7=9730
  films in Cl_2, negative ion emission 8=7104
D^-, photodetachment of electrons 5=6254
F, charge after passing through matter 5=5465
F^-, polarizability calc. 5=1130
FHF^-, divalent H 5=3950
Fe, cross-sections in plasmas 5=4694
ferrous, paramag. reson. absorpt. 5=4797
formic and deuteroformic acid, dissociation by collision with molecules of various gases 9=4756
Ga, mobility, appl. to isotope separation 6=8260
Ge_2^+, Ge_3^+, derivation 5=261
H, collision processes, charge exchange 9=7410
  cross-section in plasmas 5=4694
  from solids, charge equilib. ratios 5=2802
H^-, collisions in atomic H 7=493
  continuous absorption coeff. 7=1417; 9=5851-2
  detachment by electrons 5=3854; 6=4469
  interaction energy and scattering cross sections in He 8=4372
  interactions with Ne, A and H_2 8=6370
  light absorption 9=10505
  photodetachment cross-section 9=5853
  photodetachment of electrons 5=6254
  proton—gas molec. collisions 6=6746
  from proton passage through metal 5=8848
  scattering in H_2 7=5419
  scattering in He, cross-sections 8=3404
  scattering, low-energy, in He, Ne and A 7=7986
  scattering, low-velocity, in H 6=5952
H^+, hydration energy 6=7360
  passage through Ag foil 7=9731
  stopping power of plastics 9=5818
$H^+ \rightarrow H^-$ conversion in supersonic jets 7=1412

    structure and tensile strength 9=8940

Iron - contd
  whiskers, tensile strength 7=3772
  wire, elastic creep 6=6981
    magnetization, Procopiu effect 9=11208
    plastically deformed, coercive force rel. to initial
      susceptibility 9=8296
  work function 7=7078
  X-ray back-reflection patterns 9=9013
  X-rays, soft, absorption edge 6=2915
  yield point 8=2042
Iron compounds (See also Alloys).
  Curie point, from magnetic isotherm data 8=8114
  Fe-group salts, hydrates, asymmetry of proton resonance
  Fe-group fluorides, nucl. mag. res. 7=6458 [9=5940
  ferromagnetic, crystals, damping of elastic waves 8=7760
    minerals, effect of heat treatment on props. 6=4744
    new group 8=7608
  oxidic, new class of ferromag. materials 7=5466
  paramagnetic, spin—lattice relax. 8=4442
  various, mag. transformations 7=9753
  $BaFe_{12}O_{19}$. $2MFe_2O_4$(M = divalent metal), mag props. and
    structure 7=6340-1
  carbides, evap. films, crystal structure 9=13960
  cementite, magnetic domains 9=8299
  Fe alums, h.f. susceptibility, liq. H_2 temp. 9=454
    optical absorption and crystal electron states 8=6857
    paramag. reson. of two NH_4 and K alums 5=2002
  ferrous biotite, redox reaction at high temp. 7=9439
  ferrous bromide, mag. susceptibility 7=9268
  $FeBr_2$, $FeCl_2$, magnetic ordering 9=4784
  Fe carbide, structure of films 8=3502
  ferrous chloride, mag. susceptibility 7=2405
  $FeCl_2$, magnetic props. 6=3001-2
  $FeCl_3$, paramag. susceptibility, in weak fields 9=5870
  Fe-Cr spinels, mag. measurements 9=4115
  $FeCr_2O_4$, ferrimag. properties and gyromag. ratio 8=650
  $FeFe_{(2-x)}Cr_xO_4$, (chromites), lattice magnetostriction
    7=2816
  Fe bifluorides, spectroscopic study of mixed crystals
  FeF_2, mag. anisotropy calc. 6=3816 [6=5000
    nuclear mag. resonance 7=6459
    structure and magnetic props. 8=6045
    thermal props. rel. to antiferromag. 6=301, 1178
  ferric hydroxide, magnetic birefringence 7=9125
  ferrous iodide, mag. susceptibility 7=9268
  Fe nitride, films, structure 8=3502
  Fe_4N, magnetic structure, neutron diffraction study 9=4801
  ferrous ammonium sulphate irradiation, energy absorpt.
    5=4150
  Fe (ferrous) ammonium Tutton salt, low temp. mag.
    susceptibility 8=8919
  ferric methylammonium sulphate, spec. heat and mag.
    suscept., 0.2-20°K 7=6135
  $Fe(NH_4)(SO_4)_2$, paramagnetic relaxation 8=5121
  $FeNH_4(SO_4)_2.12H_2O$ (ferric ammonium alum), heat capacity,
  1.4°K 6=4366
    mag. suscept. below 1 K 6=3682
    paramag. props. at 1325 Mc/s 9=3643
    paramag. relax. and phase transition 9=2937
    paramag. relaxation at v. low temp. 7=8718
    paramag. susceptibility 9=453
    spec. heat below 1°K 7=6134
    spin—lattice relax. time 8=9128
  $Fe(NH_4)_2(SO_4)_2.6H_2O$, cryst. field splitting of Fe^{2+} 9=6259
  $Fe(NO_3)_3$, nuclear mag. resonance 7=6462
  Fe oxides, chemical magnetization 8=1780
    containing Co, coercive force 9=9774 [5=1061
    ferrimagnetic, satn. magnetization and crystal chem.
    ferromag. spinels, mag. anisotropy constants 5=1051
    layers on Fe monocrystals 6=3312
    magnetic properties 7=1441-2 [6=4516
    (magnetitute and α-Fe sesquioxide), demagnetization
    micropowders, coercive force at low temp. 9=437
    powders, coercive force rel. to density 5=8900
    powders, coercivity rel. to particle shape 5=1989
    soft X-ray absorption edge 6=2915
    wüstite, decomposition kinetics 9=899
  FeO, antiferromag. structure 6=3815; 9=444

Iron compounds - contd
Fe_2O_3, "weak" ferromagnetism 8=3224
α-Fe O , antiferromag. props., neutron diffract. study 9=7173
dipolar energy and magnetic props. 8=7170
domain walls and magnetization 9=460
effect of Al and Ti on mag. props. 7=5459
mag. domain structure 9=9778
magnetic resonance 5=8901
weak ferromagnetism 6=2997
weak ferromagnetism, thermodynamic theory 9=8286
whisker growth on pure Fe 8=6500
γ-Fe_2O_3, coercive force 9=9774
critical single-domain size 7=4554
intradomain mag. saturation and structure 6=5224
mag. structure and vacancy distrib., neutron diffract. study 9=5885
permittivity and permeability 8=6940
powders, coercivity 9=13434
powders, shapedistrib. 9=4788
for recording tapes, remanence curve 5=8896
Fe_2O_3—$NiTiO_3$ solid solns., mag. props. 9=9765
Fe_3O_4, effect of substrate crystalline perfection on epitaxial growth 9=13778
electron polarization microscopy study 9=7082
Hall effect, room temp. 9=8170
neutron scattering study, spin fluctuations 9=8302
Fe sulphides, elec. conductivity at α-transform. 6=6638
magnetic properties 7=1441-2
FeS, magnetic anisotropy 7=5458
magnetic and electrical anisotropies 8=1128
FeS and $Fe_{0.877}S$, thermodynamic props., 5-350°K 9=5639
FeS(molten)—W (solid), thermocouple 8=197
$FeS_{1.10}$, Λ-shaped ferrimagnetism 5=2869
FeS_2, semicond. props. 9=1459
(pyrites), elasticity 6=7757
sputtering by Ne, A, Kr and Xe ions 8=8463
FeS_X, magnetic susceptibility and elec. anistropies 9=8294
valency binding studies 5=7267-8
Fe_7S_8(pyrrhotine), order of holes 6=794
$FeSO_4$, antiferromag. susceptibility 7-538
oxidation by β-rays 6=5493
oxidation by ionizing radn. 6=5494
X- and γ- irradiation 7=2777
as X-ray dosimeter 9=11085
$FeSO_4$ = $7H_2O$, paramag. susceptibility in weak fields 9=5870
Fe selenide, magnetic properties below Curie point 8=3234
Fe_7Se_8, triclinic superlattice 9=13931
$FeSi_2$, semicond. props. 8=4967
$FeSiF_6.6H_2O$, paramag. susceptibility 8=6050
FeTe single crystal, elec. charac. 7=1293
$FeTe_2$, thermal expansion 8=1013
$FeTiO_3$, antiferromag. props., neutron diffract. study 9=7173
ceramic, synthetic, phys. props. 6=5072
$FeTiO_3$—Fe_2O_3 solid solns., mag. props. 9=8289
$FeTiO_3$—Fe_2O_3 series, magnetic props. 8=4130
$FeTiO_3$—αFe_2O_3 solid solutions 9=11594
$Fe^{+3}X^{3-} \rightleftharpoons Fe^{+2}X$, spectrophotometric study 9=8961
haematite, magnetic transition 7=8714
magnetization 7=9263
magnetostriction 6=3826
remanent magnetization 6=3029
haematite and ilmenite solid solutions, crystal chemistry 9=11594
ilmenite—haematite system, low temp. magnetization 8=236
magnetite, Co-substituted, mag. anisotropy 8=5116
Co-substituted, mag. annealing 8=6040
and Co-substituted magnetite, magnetostriction 5=8906
elastic constants 5=5672
Hall effect 9=11049
Hall effect and magnetoresistance 8=4035
h.f. permeability, frequency dependence 7=7212
magnetization 7=9263
magnetization near Curie point 6=5253
Mn-doped, permeability, zero anisotropy, temp. dependence 9=11202
spec. ht. at low temp. 6=5824
transition at 119°K 8=8914
magnetite—Co, stabilized Bloch walls 9=9782
martensite, mosaic structure 7=9462
olivine (ferromagnesium orthosilicate), high press. effect on u.v. absorpt. edge 6=6521
plumbite, magnetization, magneto-crystalline energy 9=13432
pyrites, elastic constants 5=5672

Iron compounds - contd
pyrites, thermal expansion, liq. air-0°C 9=254
Si iron, magnetization reversals, domain boundary configurations 9=7162
titanomagnetites and ilmenites ferromag., mag. props. and structure 5=9276
$Yt_3Fe_5O_{12}$, ferrimagnetic props. 7=2414
ferrites
absorption, of microwaves 8=1316
of sound and thermal cond. 8=7856
acoustic relaxation 9=872
anisotropic, Cherenkov radiation 6=7469
anisotropy energy, origin 9=11203
cation distribution, X-ray determination 9=1940
ceramics, ferromagnetic 9=13445
review 7=9155
as transducers and filters 7=4070
Co substituted, controlled properties 7=8011
dielec. and mag. props., meas. 7=7221
domain patterns on single crystals 7=6353
effect of electric polarization on props. 9=4814
elec. conductivity 8=4963
e.m. wave propagation 8=7208
electron diffraction study of mag. state 8=8477
as engineering mag. matls. 6=3011
Faraday effect 7=9286
ferrimagnetic resonance, line widths and G. factors 9=9797
theory and exp. 9=11234
in waveguides 6=6775
ferromagnetic resonance 7=3444-5, 9266
four-magnet model, with mutual interaction 9=11236
g-factor rel. to porosity 8=2397
line width 9=2495
multiplet, in mono- and polycrystals 9=11238
polycrystalline, anisotropic, theory 9=8328
spheres 8=1130
spin-wave analysis 9=9795
ferrospinels, cation distrib. 6=7528-9
first-order anisotropy consts. 6=473
flux reversal, rotational model 9=2491
with Gd, Dy and Er, mag. props. 7=9269
geometrical anisotropy in wave guides 9=9791
heat changes on magnetization 7=532, 5464, 8014
hysteresis, losses and after effect 9=11218
l.f. rotational 8=7178
kinetic processes, phenom. theory 5=1579
loss of cations during sintering 8=8898
magnetic dipole effects 7=7216
mag. field of ellipsoid, excited by e.m. wave 9=413
mag. flux reversal, rotational model 8=8128, 8861
transverse reversal 8=8881
mag. parameters 7=4534
mag. props. and crystal structure 7=7509
mag. viscosity, low temp. 7=5457
magnetoelastic waves and ferroacoustic resonance 9=2156
magnetostriction and g-factor calc. 9=5897
many-electron theory 8=3995
microwave props., effects of size 7=4537
'figure of merit' 5=8899
materials for high microwave frequencies 8=7179
permeabilities, temp. dependence 9=433
in miniaturized resonant aerial, theory 8=8949
neutron irradiation effect on Curie temp. 9=5898
orientation of crystallites 9=13884
paramagnetic susceptibility rel. to temp. 7=2428
passage of charged particles, Cherenkov radiation 9=2572
permeability, initial, effect of mag. interactions 9=8317
permittivity and permeability, review of meas. and results 8=3065
prep. and crystal chem. 7=3805
props. rel. to structure and prep. 6=3005
radiation magnetization 7=8725
resonance line-width 9=11237
in reson. cavity, frequency shift retardation 8=8939
selection for use in synchrotron 8=8902
single crystals, growth by Verneuil method 9=8991
tensor susceptibility 8=2403
with small Co content, Perminvar effect 8=8125
square-looped applications 7=1407, 7181
magnetic viscosity effects 9=4791
switching times, for symmetrical and asymmetrical fields 9=8313

Magnetohydrodynamics - contd
elec. cond. fluids, thermodynamics 9=13501
e.m. wave propag. in ionized gas in mag. field 9=3672-3
electrons, single-type, in uniform mag. field, self-consistent field, calc. 9=9865
ellipsoidal equilibrium figure, for time-dependent mag. field 8=3261
energy dissipation rate, in viscous compressible fluids
engineering applications 6=3857 [9=8391
equations, axially symmetric solutions 9=1605, 4838
  basic 6=3846; 8=8066
  in cosmogony, stationary solutions 5=4326
  exact solutions 9=1602
  integration 9=9853-4
  solutions rel. to stellar outbursts 9=3661
  stationary solutions 7=8026
  for total kinetic, internal and electric energy change using only vector potl. and plasma vel. 6=1402 [5=8090
equilibrium, in absence of external fields and dissipative processes 9=1599
  equilibrium, axisymmetric media 9=13493-4
  configurations, in axisymmetric motions 9=1600
  variational formulation 9=11278
Euler's and Alfvén's equations 8=4161
field eqns. for a moving medium 5=9779
finite rotating disk 9=3657 [6=3040
flow between parallel plates under transverse mag. field
flow due to oscill. flat plate, in trasverse field 9=9863
flow of liquid Na in mag. fields 8=6067
fluid sphere in uniform mag. field, oscillations 9=2519
fluid sphere with internal motions, oscillations 7=5480
fluid spheroids, prolate, in uniform mag. field, equilibrium configurations, calc. 9=5958
force-free mag. fields, analogue of Poynting's theorem
  Lorentz force equilibrant 9=8375 [9=8374
  soln. for cylindrical symmetry 9=9868
  stability, perturbation symmetry 9=8373
  stability, symmetric expansion 9=8376
force-free magnetohydrostatic fields 9=4842
force on conducting sphere in increasing mag. field, theory and meas. 9=8382
forces, effect on flow in liq. metal cell 5=5356
galactic turbulence and mag. field 8=4624
gas discharge, cylindrical, with field penetration, instability 9=3593
gas dynamics eqns., degeneration 8=6072
gas in magnetic fields, motion 6=4880
geomagnetic dynamo theory 8=8538
  magnetic storms 8=5529, 6526 [9=4123
geomagnetic pulsations, sudden-commencement storms
geomagnetic storms, time-constants, ring-current theory 9=4120
heated fluid, under mag. field and rotation 9=469
heated rotating fluid layer in mag. field 7=3044
helicoidal vortices 9=3653
ideal gas, with ing. thermal and elec. cond., zero temp. grad. 9=8384
ideally conducting fluid, instability 7=4411
inapplicability to ionic centrifuge 9=2864
incompressible mass, oscillating under own gravity 9=7212
infinite cylinder, cond., in mag. field, radial pulsations
  with force-free mag. field, instability 8=2424 [9=4841
  of gas, oscillations 8=63
  incompressible, oscillations 9=7209
  instability 8=7198
interactions, between current-carrying jet and magnetodielectric 9=2523

in emulsion, nuclear capture 6=3183
in emulsion, π-meson emission 9=9980
in emulsion with free protons 9=2647
in emulsion, at 1.15 BeV/c 9=11396
in flight 9=551
in flight, analysis of stars 9=2644
in H 7=8881
hyperfragment formation in d reactions 8=299
with nucleons at low energies 9=11395
with nucleons, effect of $\overline{K}^0$ - K^- mass difference 9=11394
with 2 nucleons 7=7432
observation and analysis 8=705
pion producing 9=6041
with protons 9=2645, 6024, 7284, 9989

Mesons and hyperons - contd
effects and interactions - contd
K^--meson interactions, $K^- + p \rightarrow \overline{K}^0 + n$ 9=12592
at rest 5=9965; 6=4665
star production 5=9120, 9139
and $\overline{K}^0$ stars in emulsions 7=8176
K^+-meson interactions 6=5427
cross-sections 7=9924
in emulsions 7=7434, 8880
in emulsions, inelastic 9=2648
in emulsions, with H and complex nuclei 9=552
in emulsions, 200-350 MeV 9=3791
in emulsions, 240-300 MeV 9=8480
interacting and non-interacting, decay modes 8=3310
with nuclei in emulsion 8=704, 1200, 2504, 7283, 8996
with nucleons and nuclei 7=6611, 8188-9
with protons 6=7722*; 9=9992
$K^+ + p \rightarrow K^0 + n$, analysis 9=13576
total cross-sections for C, Al, Cu, Ag and Pb 8=9063
K^+—Y—N, K—Y relative parity 9=12596
at 30-65 MeV 8=288
Λ interactions in H 9=6048
Λ—nucleon interactions, in ${}_{\Lambda}Be^9$ 9=2714
cross-section 8=6195
hypernuclear binding energies 9=3842
potential, from hyperfragment data 9=594
spin dependence 9=7294
spin dependence, from ${}_{\Lambda}He^3$ decay data 9=7295
$\overline{\Lambda}$ annihilation on protons and deuterons 9=13547
Λ^0—α potential, from hyperfragment binding energies 8=6194
Λ^0—nucleon interaction 7=103, 8173, 8191; 8=3721
$\overline{\Lambda}^0$—nucleon interaction at intermediate energies 9=12599
μ-mesons, in air, Cherenkov radn. 5=8285
catalysis of nuclear fusion 7=5651, 6534, 6614 , 9384; 8=334, 1270, 1988, 3304, 3389, 3692, 7476
catalysis of nuclear reactions 8=362, 3692; 9=13559
Cherenkov radiation 7=8187
electron-pair creation 8=4238
8-electron shower prod. in cosmic rays 8=3213
electron transitions 9=13560
initiation of non-mesonic photonuclear reactions 6=4669
ionization in gas 7=5650
ionization loss in Ne 5=9143
ionization spectrum, fast muons 6=5424
knock-on electron prod. 9=2606
polarization in $K_{\mu 3}$ 8=2487
shower productions 7=7424
soft secondary showers 5=6282
star production underground 5=6283; 6=8406
transfer from proton to deuteron 8=3304
underground, coupling electron spectrum 9=3759
μ-meson interactions, witu baryons 9=2091
in dense material 6=6930
with electrons, strong 8=5629
fast mesons 7=8884
with K-mesons, strong universal 9=8468
μ and π-mesons, underground 7=6619
μ, π, K-mesons, primary and secondary interactions 7=7435
multiple e.m. 5=7388
nuclear 6=7136; 7=6874
with nucleons 8=3303, 3305; 9=8642
with nucleons underground 7=7433
$\mu + p = n + \nu$, dispersion relations 8=2789
underground 8=223
μ^--meson interactions, in Fe and Cu 8=1180
$\mu^- + C^{12} \rightarrow B^{12} + \nu$, theory 9=12569
with nuclei, electron-pair production 8=1836
with nucleons 8=2592
with protons, coupling constants 8=2484
$\mu^- + p \rightarrow n + \nu$, neutron polarization 9=4926
vector interaction of absorption 9=11383
π-mesons, charge independence and low-energy parameters 9=3762
e.m. props., method of study 9=12575
on non-spherical nuclei 8=7392
nucleon coupling, universal β-decay 8=7270
S-wave pion—nucleon scattering, strange-particle effects 8=699
second neutral, absence of strong interaction 9=6021
second neutral, possible existence 9=8473
π-meson interactions, with baryons, γ_5 invariance 9=4275
with baryons, test of symmetry 9=2621
with C 8=8350

Mesons and hyperons - contd
  effects and interactions - contd
    π-meson interactions, with electrons 5=326
      in emulsion, at 4.5 GeV 9=9977
      He, at high energy 7=9923
      with hyperons, compound model 9=2622
      with hyperons, effect on $\pi^0-2\gamma$ decay and $\pi-\pi$ interact. 9=10592
      with K-mesons 7=8192
      with nucleons 6=6889
      with nuclei, in meson photoprod. 8=6166
      $+ p \rightarrow K +$ hyperon, det. of K—hyperon parity 9=13574
      with protons, parity violation 9=2624
      threshold interactions, inconcistency 9=2623
      5.5 GeV/c, production of cascade particles 9=6023
    π—nucleon collisions, antiproton prod. 6=7149
      associated production and change independence 8=283
      meson prod. at 1.4 BeV 6=6938
      multiple pion prod. 5=2208
      at 300-600 MeV 9=3783
    π—nucleon interactions 7=3950, 8190, 9925; 9=13004
      ang. distrib. and parity 9=3767
      chirality invariance 9=9976
      at high energies, calc. 9=9978
      nucleon energy levels 9=8450
      $\rightarrow \pi^1 + \pi^{11} + N^1$, dispersion relations 9=4936
      in π-meson prod. 8=2496
      rel. to nucleon structure 8=7696
      symmetry laws, in isospin and Lorentz spaces 9=6519
      two-nucleon potential 8=1840
    $\pi-\pi$, interactions, in antinucleon annihilation 8=6170
      Bethe—Salpeter approx. 8=7269
      and nucleon structure 9=9946
      rel. to Fermi's theory 9=12582
      strength from π—N scattering 9=546
      in τ-decay 8=5242
    π^0-meson interactions with leptons and heavy particles 5=58
    π^0—nucleon and $\pi^{\pm}$—nucleon coupling constants 8=7244
    π^--meson interactions, charge-exchange to radiative-capture ratio in H 9=543
      collisions with protons, θ^0 prod. without assoc. hyperon 6=6937
      double stars, due to fast mesons 7=3698
      in emulsions at 0.57 GeV 9=544
      at 1.5 GeV 9=697
      in emulsion at 4.2 GeV 9=7279
      in emulsion, π^+ production 9=9981
      high-energy, in He bubble chamber 9=12581
      K meson production, at 3 KeV 8=696
      low energy, with nuclei 8=1269
      in N at 1.3 BeV 8=8238
      with nucleons at 4.5 BeV 8=698
      4.3 GeV production of strange particles 8=1187
      with protons 7=685, 2622
      with protons at 5 BeV 8=697
      with protons, deuterons and emulsion nuclei, at 300 MeV 6=5423
      with protons, π-meson prod. 8=7278
      $\pi^- + p \rightarrow n + \pi^+ + \pi^-$, parity conservation 9=3766
    π^+ trajectory in e.m. field 8=7267
    $\pi^{\pm}$ meson interactions, 250-270 MeV, with C 9=2626
      with deuterons 9=695, 9979
      in emulsions, low energy 9=3769
      fission of U and charged fragment prod. 8=8354
      with nuclei, bremsstrahlung prod. 9=2570, 8474
      80-300 MeV, with light nuclei 9=2625
      with protons, total cross-sections 9=3770
    π-mesonic X-rays, from Be 6=4017
      from light elements 7=8654
    Σ-hyperon interactions, in flight 6=1627
      with nucleons, cross-section 7=9415; 8=7288
    Σ^- capture, star produced 6=5425
    $\Sigma^- + p \rightarrow \Lambda^0 = n$, polarization effects 9=556
    $\Sigma^- + p \rightarrow \Lambda + n$, $\Sigma^- + p \rightarrow \Sigma^0 + n$, parities and coupling strengths 9=11402
    $\Sigma^{\pm}$ interactions with nucleons 8=5245
    $\Sigma^{\pm} + He^4 \rightarrow {}_{\Lambda}He^5 + \pi^{\pm}$ 9=12593
    θ_0-meson interactions with leptons 5=58
    V-particles, double event 6=3254
      interactions 6=61
    Ξ interaction with nucleons 9=10003
    $\Xi^- + p \rightarrow \Lambda + \Lambda$ 9=555
  magnetic moment
    hyperons, anomalous, calc. 8=2509
      static, anomalous 9=11401

Mesons and hyperons - contd

- mechanical splitting, electrical phenomena 7=1691
- muscovite, h.f. dielec. losses, effect of mineral inclusions
- substrate for InSb films 8=3119 [9=9589

Micrometry (See also Interferometry; Strain gauges; Thickness measurement).
- air micrometer, with diaphragm chamber, wide linear range 9=11872
- dual objective optical micrometer 7=1093
- electronic micrometer 6=4857
- eyepiece, hairline position recorder 6=8722
- mirror 9=4329
- submicron circular apertures, meas. 9=6566
- variable capacitor micrometer for 200A disp. 8=3748
- vibrating-reed null-indicator 5=769

Microphones (See also Acoustic transducers).
- $BaTiO_3$, ceramic, for high sound pressures 8=2917
  - for sound level meters 8=4825
- behaviour in v. high level sound meas. 6=1930
- bone transducer as, speech intens. evaluation 8=3835
- calibration 9=4403
  - absolute 7=4089
  - pistonphone for 8=2926
  - students' expt. 8=550
  - using thermophone 9=1207
- condenser, as acoustic standard 5=7792
  - air film effect on membrane vibr., theory 5=121
  - air-stiffness controlled 6=4268
  - for airborne ultrasonics 9=11965
  - calibration above 10 000 c/s 5=144
  - for high sound-pressure meas. 7=3098
  - response stabilization 5=2523
  - with solid dielectric, for airborne ultrasonics 5=2520
- development (1915-54), survey 5=138, 5283
- ear-insert type 7=4073
- for freqs. below 1 c/s 9=6654
- hydrophone, electrokinetic, for 9 kc/s 7=9580
  - electronic, for v.l.f. calibrations 5=1638
  - for particle vel. meas. 6=7230
- noise cancelling effectiveness meas. 7=188
- noise shield for use in noisy locations 8=1578
- piezoresistive, of n-type Ge 7=4072

Microphones - contd
- probe, high temp. and intensity anal. and testing 6=161
  - tube 8=6780
- ribbon, optimum dimensions calc. 6=4927
- standardization, absolute 8=2208
- stereophonic loudspeaker evaluation by microphone arrays 9=13123
- unidirectional, with variable front-to-back distance 5=136
- velocity-sensitive and press.-grad.-sensitive, distinction 6=5736

Microscopes (See also Electron microscopes; Ion microscopes).
- attachment for accurate microdrilling 9=4504
- attachment for observing high-temp. phenomena 5=884
- β-ray types, review 9=11698
- cell for orientation of fibres in elec. field 5=5396
- combined electron and optical 5=2786
- computing microphotometer for cell analyses 5=6662
- for dust routine counts, eyepiece graticule design 5=1269
- for electron microscope grid placing 8=7552
- extensometer stage 7=3993
- fluorescence, filter combination 5=2653
- flying=spot, monochromatic u.v. television microscope for quantitative cytological meas. 9=8016 [6=8721
- focusing, elastic control 7=7807
- Gabor, optical single side-band transmission 7=208
- high-temp. filament furnace 9=10888
- hot stage, using electron bombardment 5=5350
- image converter for infrared 5=4579
- interference, fringe spacing 6=5029; 7=7038
  - half-shade eyepieces 9=6807
  - obliquity effects 7=7039
  - refractive index meas. 5=2634
  - review 7=6083

  - α-particle microbeam attachment for irradiating living cells 5=1413
  - commercial, truth of images 5=9597
  - Fabry—Perot filter, use as phase plate 7=2100
  - fluorescence arrangement 9=3366
  - Francon, review and applications 8=6899
  - dark-field illum., for biolog. objects 7=9650
  - fluorescent, use of polariz. rings 7=7040
  - history and current problems 9=1354
  - isotropic compensator 7=6059
  - Lyot, for microstructure study 8=3749
  - polarization apparatus 7=6058
  - theory, basic approximation 6=2025
  - using mica-ring phase-plate 8=6898
- phase fluoremeter, for fluorescence lifetime meas. 9=7979
- photoelectric comparator for linear scales 6=8013
- photoelectric, for meas. of separation of mass spectrograph doublets 9=4502
- polarizing, $BaTiO_3$ 1st-order trans. study 5=7900
  - diffraction image anomaly 9=2254
  - half-shade angle 9=6806
  - orientation stage 8=5827
- precision, for anal. of large nuclear plates 9=1643
- projection, appl. to microphotometry 6=8641
- reflecting, for i.r. spectrometry 5=4578; 6=1037; 8=2236
  - multiple images 5=6976
  - for u.v. spectroscopy, objective 5=8681
- remote controlled, automatic 9=8015
- resolution, increased lateral 9=5600
  - semicoherent illumination effect 5=6069
- for scanning large-area nuclear emulsions 9=7229
- schlieren attachment for surface testing 7=4257
- scintillation counter attachment 9=4866
- shadow-casting 5=238
- "solid image" microscope, depth scanning 9=2253, 4500
- sonic "macroscope", resolving power 7=1165
- stage with multiple movements 6=5809

- Microscopes - contd
  - stage-noise, of different microscopes 5=883
    - meas. method 5=882, 6068
    - and spurious scattering 5=7610
  - thermionic emission, for metals 5=7160
  - three-dimensional 9=9541
  - tilting object stage 9=8017
  - topographic, for matte and mirror surfaces 9=1353
  - travelling, improved reference line 5=1565
    - for X-ray powder photographs 8=3580
  - triplet eyepiece 5=7885; 9=238-9
  - ultrasonics absorption 9=7901
  - X-ray Bragg's, simple version 5=9258
    - (microfluoroscope), for biological specimens 9=5789
    - mirror focusing systems 9=5787
    - projection, focusing aid 8=5944
    - projection, with improved resolution 5=7993
    - total-reflection, aberrations 5=2549
- Microscopy (See also Electron microscopy).
  - analysis of aerosols 7=8922
  - Bitter figures study 8=6035
  - cell counting and sizing, digital computer appl. 5=1572
  - compound polarizer for anatomical work 8=143
  - counting and meas., thickness and shape 5=1263
  - crystal growth study, apparatus 9=10356
  - diamter meas. method for fibres and threads 5=1566
  - diamonds, electroluminescence 9=3336
  - differential interferometry 9=3364
  - diffraction, images, effect of chromatism 7=5964
    - two-hologram methods 7=302
  - double-illumination 6=280
  - dust, coal, visual counting and sizing 5=1271
    - routine counts, eyepiece graticule design 5=1269
    - shadow tech. and automatic counting 6=5041
    - sizing, profile strip for testing microscopists 5=1272
  - etching method by ion bombardment 9=13835
  - flash photomicrography 5=3376
  - fluorescent, in transmitted and reflected light 5=6975
  - flying-spot, image problems 6=266
    - particle alignment study appl. 5=1279
  - of high-power microscopes, automatic 7=2102 [9=13991
  - gap length in nuclear emulsions, semi-automatic meas.
  - infrared, precipitation on dislocations in Si 9=4017
    - review 5=4577
  - interference, depth meas. appl. 9=1337
    - semicond. surface layer meas. appl. 6=8705
    - tracks in exam. in nuclear emulsions 5=5160
    - 2-beam, appl. to surface studies 5=239
  - large field Babinet compensators 6=275*
  - large path differences, interferometric meas. 5=1736
  - at liquid-He temps. 9=12181
  - mechanical device for rapid interchange of suppression filters 9=4503
  - microfurnace for high-temp. microscopy 9=3369
  - microradiography, 2X method, diffraction effects 9=4663
  - milling of bone sections 5=6671
  - movement of cilia and chromosomes 9=11664
  - muscle fibre 9=10441
  - optical, use of electron microscopy techniques 9=4069
  - orientation det. of crystallites 9=13884
  - parasitic light study 5=6070
  - phase-contrast, coherence theory applications 7=6057
    - diffraction effects due to amplitude and phase changes in wave front 5=224
    - gas flow study 6=3550
    - high contrast, method of obtaining, theory 5=2652
    - history and current problems 9=1354
    - interferometric meas. of phase change in thin films
    - of living cells 7=6782 [6=4345
    - optical transformation theory 9=4501
    - phase and amplitude meas. by elliptical anal. 5=3662
    - review (1950-54) 5=1747
    - test objects for resolving power 6=5807

  - rocks, diffusion of light, compared with moon surface
    - induced elec. polarization 9=2298
    - magnetism 5=7545 [9=9771
    - 38 samples, mag. props., rel. to magnetite content
  - spinels, heat capacity rel. to lattice reciprocity 9=8794
  - tectites, K—A age 9=12890
  - U minerals, nuclear stability 7=2616
- Mirages (See Atmospheric optics).
- Mirrors (See also Telescopes, astronomical).
  - Ag, surface structure 7=794
  - Al, anodic coating with multiple oxide films 5=237
    - evap., reflectivity 5=7867
    - films, i.r. optical constants 5=2629
  - Al—Ni, technique for coating forgings 8=7854
  - aluminized, reflectivity 7=9112
    - u.v. reflectance 8=2252
  - anamorphic mirror systems 5=6877
  - anastigmat with two concentric spherical surfaces 9=10728
  - aplanat, of 2 aspherical mirrors 8=559
  - for astron. telescope, new type 6=6293
  - bonding to metal mounts 9=236
  - for C arc image furnace 8=9197
  - coated, spectral reflection, 1-25μ, meas. 9=9511
  - coatings for low visible and high i.r. reflectance 6=1118
  - in coelostat, aluminized, elliptic polarization in reflection 9=9533
  - Dall—Kirkham objective, null test 5=9533
  - dielec., opt. props. with oblique incidence 5=9583
  - diffraction patterns produced by imperfect surfaces 9=3351
  - double mirror, for exact imaging of spectral light sources
  - electron, for electron emission microscope 8=7111 [9=1261
  - elliptical and parabolic, reflection 9=166
  - Ge, for production of i.r. polarized light 9=10880
  - Hg, vibration free 6=8142
  - high-speed parabolic, "lower" test 9=6819
  - image reducer 6=6505
  - imaging, in astron. telescope, thermal deformation 5=1446
  - interference on Al bases 9=12145
  - light deviation errors 8=5746
  - liquid surfaces as planes of reference 6=8076
  - metal, improved reflectance by deposited $\lambda/4$ multilayers
    - reflection eqn. 5=6050 [9=9513
    - standing light waves prod. 8=4842

Mirrors - contd
  micrometer 9=4329
  mountings, for interferometers 5=2637
    for spectrophotometry 5=7823
  multilayer, dielec., for interferometer 5=8653
    theory confirmed 9=10867
    for u.v. interferometers 8=7846
    ZnS and cryolite on glass, phase characteristics 9=9507
  neutron reflecting 6=8413
  objectives, correcting element 5=5972
  with one surface of revolution, caustic eqns. 9=9373
  parabolic, for solar furnaces 7=5267
    sun's image, energy distrib. 5=3331
  paraboloidal, method for making 8=1641
  protective films for surfaces 6=278
  reflecting systems, new, review 6=8645
  replica mirror production 9=11983
  rotating, deformation by centrifugal force 7=4116
    for high-speed photography 5=4278
    in ultra-high-speed camera 9=976
  rotating—stationary system, as light-pulse generator 8=5830
  for Schmidt camera, preparation and testing 9=12937
  spherical, complex amplitude distrib. 7=1162
    for solar spectrograph 8=5577
    use in Littrow spectrograph 6=3602
  surface of revolution, from caustic eqns. 9=9374
  thin films, dielectric, for u.v. 6=2007
    preparation and properties 8=5802 [9=5495
  toroidal focussing for grazing-incidence spectrograph
  Walsh, in double-beam i.r. spectrophotometer 9=4438
  wavy-surface, for lighting calc. 5=9532
    for X-ray focusing 9=5787
Moisture (See also Atmosphere, humidity; Humidity; Permeability, mechanical).
  As$_2$S$_3$ glass, hygroscopicity 8=3013
  det., nuclear mag. reson. spectroscopy 5=6592
  effect on dielec. const. of powders in paraffin 8=3064
  expansion of ceramics due to moisture, effect of components
  in soil, instrument for meas. 5=7557 [9=1894
    meas. by neutron scattering 8=7636
    meas. methods, review 9=1962
Molecular beams (See also Velocity analysis, particles).
  alignment by selective transmission 5=8296
  a.c. field of variable amplitude and phase effect 8=6392
  ang. distrib. of beams from orifice 8=8406
  appl. to microwave spectroscopy 5=5318
  condensation, on condenser surfaces, at low temp. 9=2144
    effect of surface state 5=3167
    at Laval nozzle 7=2712
  detection by conductivity method 5=7400
  diffraction by apertures, wave nature 6=8410
  elec. reson. method appl. to Li^{7}F^{19} 5=7235 [9=3995
  electron-bombardment detection of noncondensable beams
  energy exchange between molecules and a surface 8=9102
  focusing polar molecules 5=6526
  generation, by gas expansion through Laval nozzle 9=10217
  high-temp. microwave spectrometer 8=4871
  intense beam of noncondensable gases, prod. 8=8405
  mass spectrometer 8=8821
  metal-shadow evaporation sources, imaging by pinhole camera 5=2237
  molec. ions, bombard. neutral molecules, charge permutation and dissociation 9=8784
  multipole focuser and separator 8=9100
  non-linear oscillator, fluctuations 9=8704
  paramag. reson. expts., review 6=4505
  pulsed, appl. to activation of fast chem. reactions 5=5006
  radiative collisions with electron beams 7=4451; 8=7470-1
  reaction study, K with HBr 5=10029
  resonance, design of frequency standard 9=10552
    in oscillatory fields 9=759
    shift by extraneous e.m. fields 8=719
  resonance transitions, averages over velocity distrib.
    induced by perturbations 6=1864 [6=1422
    in rotating magnetic field 5=9796
  scattering of low velocity beams 7=6377
  theory and applications (book) 6=5435
  universal detector 5=7399
  use in e.m. wave generator 8=2435
  velocity distrib., app. for meas. 5=9153
    of beams from Laval nozzle 7=2711
  A, deposition on a 4.2°K surface 9=13765
Molecular beams - contd
  alkali halide, nuclear quadrupole interactions 9=7450
  H_2, intense, partially monochromatic, Laval nozzle production 5=2217
  HD, in mag. field, theory 9=758
    in strong magnetic fields 9=3996
  He^3, resonance power sharpening 9-1802
  KF, h.f.s. det. 7=6408*
  Li^{6}Cl, spectrum by resonance 6=8106
  Li^{6}F, spin-rotation interactions 6=520
  Li^{6}F and Li^{7}F, Zeeman splitting hyperfine structure 9=5119
  N_2, scattering by steel, Al, glass 8=9101
  Ne^{21}, mag. moment det. 8=314
  O_2, r.f.Zeeman effect 8=124
  S, semiconductor detectors 8=8404
  Se, semiconductor detectors 8=8404
  TlF, hyperfine structure 9=5121
Molecular relaxation (See Molecules, relaxation).
Molecular weight
  b.pt./molec. wt. ratio, rel. to intermol. forces 7=6677
  polymers, branch-chain, distrib. rel. to ring formation
    high, rel. to viscosity 5=8543 [5=8981
  gelatin in soln. 5=1340
  polyethylene, data from electron irradiation 5=599
  polymethyl methacrylate, effect on fracture phenom. 9=831
    from stress relaxation 6=6969
Molecular weight determination
  large rod-like particles, light-scattering data 9=10877
  intermediate-size molecules, appl. of sedimentation velocity analysis 9=6352
  macromolecules, general methods 6=5304
    light-scattering method 5=2643
  by osmotic electric or magnetic field 9=6593-4
  polyesters, radioactive labelling method 5=3237
  polymers, in electrolyte, ultracentrifuge equilib. 5=3243
    linear, high 8=2629
    in solutions, from light scattering 5=232; 7=7792
    surface film method 5=10046
  self-balancing differential refractometer 8=1591
  air in upper atmosphere 8=5532
  Ge vapour 5=3685
  gelatin in soln. 5=1340
  polymethacrylic acid, light-scattering method 5=4157
  polytrifluorochloroethylene, apparent, rel. to true av. 6=1716
Molecules (See also Kinetic theory; Spectra).
  additivity rules for molecular props. 8=9104
  atom recomb., rate const. var. for I 5=8955
  Brownian motion in centrifugal field 9=6599
  chemical reactivity, quantum mech. quantities 7=5532
  correlation of constants 8=7445-6
  deielectric losses in long chains 9=12203
  dielectrics and waves (book) 5=6103
  dynamic stability criteria of motions 9=723
  electron emission due to fast molecules 8=1735
  group theory, finite groups, applications (book) 9=10496
  halogenated, slow-electron capture 9=2450
  macromolecules, biological, radiation inactivation 9=11678
    configurational entropy 9=5120
    rodlike, solutions, normal stress effects 9=7485
  Mayer's theory of cluster expansions 9=1098
  mesic molecules, formation in liquid hydrogen 9=2892
    nuclear fusion probability 7=8883
  μ-mesic molecules 8=3389
    nuclear catalysis 8=7476
    p—d ion, internal conversion processes 9=7369-70
    potential curves and energy levels 8=8409
  mobility in liquids near glass temp. 9=6587
  notation for polyatomic molec. spectra 6=1029
  observation by field emission microscopy 9=7544
  organic, mag. susceptibility and anisotropy 7=6678
  penetration of porous solid 8=4766-7
  photo-orientation in solid solns. 8=6480
  polarizability, effect of substitution of D/ or H 9=7463
  potential of spherical polyelectrolytes 8=905
  quadrupole n.m.v. in solids, influence of motion 9=12503
  quantum mechanical calc., computational methods, review 9=8697
  rotating, scattering of neutrons 9=6006
  small diffusion in high polymers, temp. dependence 9=11540
  symmetrical-top type, energy in elec. field 8=799
  theoretical approximations in current problems 5=1079
  Thomas—Fermi approximation 5=3934; 7=6904

Molecules - contd
  anthracene, association in naphthalene, effect on luminescence 8=982
  Br_2, recombination at light temp. 7=5167
  CN conc. in arc. discharges, meas. 8=1081
  carbon blacks, impaired electron 9=7486
  D_2, para—ortho conversion 8=5455
  H reaction with O_2, OH, HO_2 and H_2O prod. 6=2488
  H_2, magnetic susceptibility 5=7266; 9=13757
    neutron scattering 8=4229
    single-centre wave function 9=7445

Ra^{224}, quadrupole moment and deformation 8=5299
RbCl, rotational spectra, molec. beam method 5=1085
RbF, cosine interaction 5=6359
quadrupole interaction constants 9=729
Re^{187}, quadrupole coupling constants 5=846
ReO_3Cl, quadrupole coupling, theory 9=12749
ReO_3F, quadrupole coupling const. 9=12056
quadrupole coupling, theory 9=12749
rubber, proton mag. resonance 8=408
S^{33} in CS 5=6929
Sb in solids, pure quadrupole spectra 5=8134
$Sb^{121,123}$, reson. freq. in compds. 5=3940
in Sb_2O_3, $Sb(C_6H_5)_3$, $Sb(C_3H_7O)_3$,$SbCl_3$ 5=7254
SbH_3, SbD_3, quadrupole 5=2590
semiquinones, electron spin resonance 6=1385
proton h.f.s. 6=4561
Si^{29}, relaxation time 7=384
in Si cpds., shifts 6=8900
1.2.4.5 tetrachlorobenzene, quadrupole spectrum 6=239
tetrafluorocyclobutanes, F magnetic resonance 7=2503
thiophene derivatives, spin—spin coupling 9=11533
Tl halides, quadrupole constants of halogen nuclei 8=7819
trialkyl phosphates, H^1—P^{31} spin coupling 9=13750
U^{3+} in UF_3 5=6302
vinyl cyanide (acrylonitrile), quadrupole coupling const.
along C ≡ N bond 9=7471
vinyl halides, and bond charac. 6=2306
vinylidene chloride, quadrupole 7=4156
internal mechanics: vibration, rotation
acoustic absorption due to molecular resonance 9=5455
acoustic relaxation by radiation 6=4265
anharmonic oscillations of nuclei, influence on neutron
diffraction studies 9=7490
antibonding Morse potential 9=1825 [5=8967
2 asymmetric molecules, internal rotation, wave eqn.
asymmetric top molecules, asymmetry constant, from i.r.
data 9=10173 [9=9434
with quadrupole bond, Stark effect in rotational spectra
rigid, transition frequencies and microwave rot, spectra,
computer program 9=12746
slightly asymmetric, energy levels 7=9774
asymmetric rotors, energy levels 6=4544; 8=3414, 6378;.
9=12742

Molecules - contd
internal mechanics: vibration, rotation - contd
asymmetric rotor energy levels and line strengths,
reduced energy matrices calc. 9=6183*
rigid consts. calc. from energy moments 8=2610;9=7427
Badger's rule, justification 6=3877
band spectral const. similarities, different groups 6=8305
barriers to rotation 8=7441
internal rotation, simple model 6=3881
magnitude 5=1084
bipyramidal $M(XY)_5$ molecules 8=7443
central force fields and bending motions 9=7425
centrifugal distortion const., influence of Fermi resonance
chain of atoms, vibrations, calc. 9=8773 [6=1434
coaxial internal rotator, energy levels 7=3485
complete harmonic potential function calc. from vibr.
frequencies 7=8039
complete isotopic rule, appl. to plane molecules 9=7433
complex molecules, local symmetry in analysis 6=3064
shape of absorption and emission bands, calc. 9=12025
vibrational-level equilibrium, rel. to spectra 9=9485
coordinate systems and secular eq. formulation, review
correlation of constants 8=7445-6 [5=7238
coupled anharmonic vibr., cause of spectral band
broadening 7=2476
coupling of oscillations in crystalline mesh 8=2604
diatomic linear chain, localized vibrations 9=12738
diatomic molecules, fundamental vibrations 5=8116
interaction, influence on line intensities 5=5317
ω_e of molecule XY rel. to those of XX and YY 5=7241
Poeschl—Teller and Morse functions 8=2609
rotating anharmonic oscillator, Stark effect, dipole
moment 9=6206
rotating—vibrating, term series by perturbation 9=7422
$^1\Sigma$, line intensities in Raman effect 9=9443
two molecules in e.s. interaction, selection rules 6=5774
vibration—rotation lines 7=7257
vibrational bands, internuclear distance 9=10195
vibrational potential 6=4545
vibrational probability density and r.m.s. deviations,
for 3 models 9=7435 [5=9556
vibrational spectra, electronic bands, intensities calc
vibrational transition probabilities 5=422; 9=11528
disturbed rotation, kinetic energy, critical point 5=3686
dynamic quantum mechanical stability criteria 9=723
electron and nuclear motion effect 7=7252
electron diffraction, vibration effects 5=8120
electronic ang. momentum calc., appl. to N_2 5=6355
electronically excited species, symposium 8=4383
vibration perturbation 9=7429
electrostatic method, combined approx. approach 5=5552
energy levels of near symmetric top, tables 8=2608
error potl. and error (vector-) function 5=8961
excitation of vibration by collision 8=798
probability, calc. 9=11539
excited vibrational states, relaxation time meas. 9=2868
Fermi resonance, anomalous band intensity 9=8714
perturbation term 9=5115
force constants, and bond energies in related molecules
determination 6=6422 [5=9811
det. from Raman data 6=1423-4, 4543
for unlike molecules, from thermal diffusion 7=8744
and vibrations 7=7256
free internal rotation, classical soln. 8=4374
r-centroids, of molecular bands 6=6052
of O_2^+, N_2 bands 7=2481
gases, dielectric orientation-polarization 9=8753-4
Hamiltonian, for nonrigid internal rotor 6=3882
for nonrigid asymmetric rotor 6=3883
higher order rotation-vibration energies 6=6050
hindered rotation, effect on bound proton scatt. of neutrons
with high potential barriers 7=4582 [6=3299
interaction theory, appl. to methyl silane 5=424
isotope effects on thermodynamic props. 7=9778
in organic molecules, thermodynamics 6=2280
in symmetric-asymmetric molecules 7=1483
h.f.s., due to rotation in $^1\Sigma$ molecules 6=526
of rotation spectra due to 2^4-moment of nucleus 7=4591
induced i.r. absorption, in gases 8=4381
theory 8=3417
vibronically induced, of forbidden transitions 9=6188
infrared band intensity calc. 7=5506

  A fission chambers 8=7227
  acoustic ionization chamber 8=1144 [9=5975
  by activation of circulating solutions, continuous method

Neutrons and antineutrons - contd
  detection, measurement - contd
    α-fission counter, 3-channel 8=4199
    in atmosphere, energy distrib. at high altitude 9=4771
    with B-containing counter in $C^{13}(\alpha,n)O^{16}$ studies 5=2170
    $B^{10}(n,t2\alpha)$ as neutron monitor 6=6909
    BF_3, proportional counters 8=669, 5158; 9=3686
      design theory 9=8403
      high-press., plateau slopes and pulse characteristics
    C stars in emulsion tracks as monitor 5=9927 [9=8404
    calibration, apparatus for time selectors 6=5177
      of counters, with Po-α-Be 5=2226
      of international source 5=3151
      of N.B.S. photoneutron source 6=6941
    collision counters, wall and end effects 9=11320 [5=3150
    counter, sensitivity uniform rel. to energy, 0.5-6 MeV
    counter telescope, efficiency for nonisotropic point source
    counting system 9=4868 [9=11339
    Cu—boron carbide thermopile 8=5165
    delayed neutrons as proof of $Li^7(\gamma,2p)H^5$ 9=3914
    distrib. in BEPO control face shield 5=9112
    distrib. in pile, ionization chamber appl. 5=2817
    loaded with B and Li emulsions 9=13526
      in spectral analysis of reactor neutrons 9=14013
    energy meas., in emulsions 7=4264
      scintillation counters 7=6624
      from tracks in emulsions, slide rule 5=8301
    escaping from reactor velocity distrib. 5=4084
    fast neutrons, Bi fission ionization chamber 7=9733
      dose rate in large tissue-equivalent phantom 5=560
      dosimetry in high γ fields 6=3303
      Hornyak-type detector 8=8186
      KI 6=714
      plastic phosphor matrix 8=5161
      total cross-sections 7=3740
    fission chambers 6=4025, 4461
      for reactor instrumentation 5=3840-1
    fission counters, for fast neutrons 5=9721
      for monitoring 9=12523
    fission neutrons from Pu^{240} 7=4741
    fluorescent U glass 5=7405
    flux, absolute determination with In probes 9=3752
      absolute, fast neutrons, photog. method 6=4677
      absolute thermal, with In foil and 4 π-counter 9=9905
      BF_3 'long counter' 5=8852
      fast neutrons 7=8901
      fast, comparison of methods, $T^3(d,n)He^4$ appl. 5=4982
      using load emulsion 9=14014
      50-2000keV, by recoil counter 5=9978
      1-30 MeV range, absolute det. 8=6152
    foil detectors, self-absorption effect 6=8416
    γ-ray insensitive fast-neutron counter 9=9895
    in gas discharge thermonuclear expt. 6=3974
    for Harwell fast chopper, assessment 8=6092
    intensity, using alternating-light method 6=4598
    ionization chamber, multi-plate 9=11307
    mechanical rotating selectors 9=11340
    method for use with pulse accelerators 6=4027
    mirrors for scattering cross-section det. 6=8413
    in $MnSO_4$ soln., strength meas. of neutron sources 9=7265
    monoenergetic techniques in 10-30 MeV range 6=7737
    Na permanganate soln., Szilard—Chalmers reaction 9=11181
    by photographic plates 5=9162-1
    photomultiplier, and fission counter, neutron-sensitive
      with U cathode 8=8190 [9=2554
    photoneutrons, using NaI crystal 5=4064
    polarization analyser 7=9394
    portable survey meter 5=5660
    probes, disk-shaped, disturbance of neutron density
      infinite disk-shaped 7=764 [6=8417-18
      orientation effect 5=6535
    proportional counters 5=5466
      with Be walls 6=1315
      He^3 filled 6=1317
    proton recoil counter, for neutrons > 1MeV 9=13529
    RaαBe standard, emission rate 7=7442
    in radiation protection 5=1420
    in reactors, monitoring 6=6180
      power monitoring app. 8=7326
      thermal flux 7=9898
      use of miniature fission chambers 8=8363
    scattered from floor, correction for dosimetry 5=561

Neutrons and antineutrons - contd
  detection, measurement - contd
    scintillation counters 6=5971
      absolute counting 5=1138
      borazole (activated) 5=1004
      efficiency, ZnS:Ag—polymer phosphor, for fast neutrons

  - Cr(d) reactions 7=2650
  - $Cu(\gamma,n)$ yield 5=3104
  - Cu(n,2n), knock-out process 6=6915
  - Cu(p,n), 23 MeV protons on thick targets, yield 5=4932
  - $Cu^{63}(p,n)$ Zn^{63} 6=7682
  - D, photoneutrons from U^{235} fission products, yield 6=1583
    - in pinch discharges 9=534
    - during pulsed elec. discharge 9=533
  - D—D and D—T reaction in 200 kV proton accelerator 9=3588
  - D(d,n) reactions 6=6162
  - D(d,n) He^3 7=710
    - heavy-ice targets for fast neutrons 8=3374
  - D(d,np)O 7=3736
  - $D(\gamma,n)$, yield 8=6326
  - D_2O, photoneutrons from U^{233} and Pu^{239} fission products
    - proton bombardment 9=10104 [6=2413
  - Fe^{254} spontaneous fission, prompt neutrons 6=4630
  - $H^3(d,2n)He^3$ 8=2566
  - I, photoneutrons, 2nd maximum 8=339
  - Li, by Li ion bombard. 8=8329
    - 285 MeV polarized proton bombarded, asymmetry
  - Li^6, photoneutron cross-sections 9=6124 [5=508, 9075
  - $Li^6(d)$ 8=728
  - Li^7, photoneutron cross-sections 9=6124
  - $Li^7(d)$ 8=728
  - $Li^7(d,n)Be^8$ 5=9082
  - $Li^7(p,n)Be^{7*}$, yield for 2.5-2.9 MeV p 5=7361
  - Li^8, decay, electron—antineutron angular correl. 8=9035
  - Lu^{175}, photoneutron threshold 8=2572
  - Mg, by μ^--mesons 7=4696
    - photoneutrons 8=8331
    - photoneutrons from natural Mg 7=2661
    - 23 MeV protons on thick targets, yield 5=4932
  - $Mg^{24}(\gamma,n)$, cross-section 5=7372
  - $Mg^{25}(\gamma,n)$, cross-section 5=7372
  - Mo(p,n), 23 MeV protons on thick targets, yield 5=4932
  - N(p,n), 2.2. BeV protons 5=3097
  - $N^{14}(d,n)O^{15}$, source of 7 MeV neutrons 6=1576
  - Na, by μ^--mesons 7=4696
  - Ni, p and d bombarded 7=6555
  - $Ni^{58}(p,n)$, neutron threshold meas. 9=2786
  - $Ni^{60}(p,n)$, neutron threshold meas. 9=2786
  - O, 2.2 BeV proton bombarded 5=3097
  - O^{16}, absorption of μ-mesons 9=12688-9
  - $O^{18}(\alpha,n)Ne^{21}$ 6=1556, 6149
  - O^{18} $(d,n\gamma)F^{19}$ 9=3896
  - P^{31}, 8 MeV deuteron bombarded 5=9083
    - proton bombarded 7=2643
  - $P^{31}(p,n)$, neutron threshold meas. 9=2786
  - Pb, by μ-mesons 7=7364
    - from μ^--meson capture 9=6142
    - 250 MeV photon bombarded, yield 5=9087
    - photoneutrons 8=342
  - Pb^{208}, photoneutron yield 6=6907
  - Pb^{210}(RaD), emission 7=655; 8=5292
  - Po sources, anomalous emission 5=2219
  - Po^{210} as source 8=3328; 9=8465
  - Po—Be source, intensity 9=9961 [5=2226

Nuclear magnetic resonance and relaxation - contd
Ag trihydrogen periodate, proton resonance 9=13470
Al 5=6334
  Knight shift, 1-10 000 kg/cm^2 9=8369
  normal and superconductivity relaxation 9=7006
  relaxation 9=7495
  spin—lattice relaxation 6=3052
  superconducting, nuclear relaxation 8=192
  superconducting, spin relaxation time 9=13482
Al^{27}, in chrysoberyl 9=4445
  in euclase single crystal 5=7258
AlBr$_3$, dimerization evidence 6=8901
AlI$_3$,I^{127} quadrupole resonance 9=9850
Al$_2$O$_3$, polycrystalline, Al^{27} quadrupole broadening 8=8432
AlSb, spin—lattice relaxation times 9=6942
alcohols, long-chain normal primary, proton resonance
  spectra 6=7592
  primary, proton resonance relaxation 9=12488
  proton resonance, effect of paramag. ions 8=7457
alkali halides, dislocation density det. 9=8812
  mixed crystals, quadrupolar effect 7=3823
alkali metals, diffusion effects 5=6336
  Knight shift, change on melting and alloying 9=13821
  Knight shift, 1-10 000 kg/cm^2 9=8369
  spin relaxation 5=7227
alkyl derivatives, fine splittings 7=1492
alkalyl nitrites, potential energy barrier det. 9=7200
  proton resonance 7=8056
amides, rate constants hindered internal rotation 7=6385
  restricted rotation 5=8121
amino and amido cpds., N^{14} quadrupole resonances 9=9848
amino acids, proton resonance 7=8059
amino group, structure det. 5=9804
aniline and derivs., mixtures with acetic acid, proton
  resonance 9=8364
aromatic, carbonium ions, proton resonance 9=13471
  molecules, proton resonance, rel. to ring currents
As^{75} 5=3940 [9=13472
As^{76} 7=8785 [9=9851
As trihalides and S addition cpds., quadrupole resonance
p-azoxyanisol, liquid crystals, proton resonance, fine
  struct. 9=12485
azulinium ion 7=2516
B^{11}/B^{10}, ratio of g-factors 8=6215
B compds., quadrupole interaction 7=8068
B$_4$C, powdered and single crystal, B^{11} resonance 9=8368
B$_2$H$_6$ 5=1094
B$_6$H$_{10}$(hexaborane), B^{11} and proton resonance 9=7464
BA^{135,137} 6=6081
  Knight shift 7=629
Ba chlorate monohydrate, proton resonance 5=7538
Be 5=6334
benzene, containing powdered C, proton resonance
  enhancement 9=510
  monosubstituted, molec. resonance absorption 5=3710
  proton resonance, high-resolution spectra 9=743
  trisubstituted, proton resonance 9=13473
benzene hexachloride isomers, spectra 6=8903
BiH, BiD, rel. to hyperfine structure of band spectra 6=7272
Br, crystals, Zeeman splitting 5=2948
  quadrupole spectra and Hammett's sigma values 5=453
Br^{76}, level inversion in h.f.s. 9=2693
Br^{79}, in heterocyclic compds., quadrupole resonance 7=3502
  solid, quadrupole resonance 9=8372
Br^{81} 5=3940
  solid, quadrupole resonance 7=8372
Br compds., Br^{79} quadrupole resonance 9=7203
  quadrupole resonance 5=2054
1-Br,5-Cl-thiophene, saturation and quantum transitions
β-brass, Cu resonance, Knight shift 9=2928 [7=2547
bromobenzene, Br^{79} quadrupole resonance 9=5956
brucite crystals, proton positions 7=903
t-butanol, H-bonding 9=10183
  trimeric association 8=8512
1-butyne, high resolution spectrum 9=13478
C^{13}, chem. shielding and spin coupling 7=6402
  resonances in organic cpds. 7=4595
C cpds. containing F, relaxation processes 9=2882
CF$_3$CCl = CFCl spectrum, F^{19} multiplets 6=8902
CH$_3$ group, solids, proton resonance 5=9775
C$_6$H$_4$(CF$_3$)$_2$, dynamic polarization 8=5288
C$_6$H$_5$Cl, Cl^{35} resonance 7=5519

Nuclear magnetic resonance and relaxation - contd
CO$_2$, microwave absorpt., suggested explanation 5=188
CaB$_3$O$_4$(OH)$_3$.H$_2$O, B^{11} resonance 8=5481
CaF$_2$, F^{19} line shapes 7=8036
F^{19} resonance, line shapes and widths 9=5944
calcite, C^{13} chemical shift, anisotropy 9=2881
Cd, Knight shift, line shape, relax. time 8=4281
  spin—lattice and spin—spin relaxation times 9=11261
Cd^{111,113}, Knight shift 7=629
Ce^{139}, h.f.s. alignment 6=3105
Ce^{141}, alignment 5=3973
Ce$_2$Mg$_3$(NO$_3$)$_{12}$.24H$_2$O, proton resonance below 1°K 9=5949
chlorates, Cl quadrupole resonance line widths 9=13490
chlorobenzenes, Cl^{35} pure quadrupole resonance 5=3938;
  solid, proton resonance 9=5935 [8=388
chloroform, proton resonance, H bonding study 5=8130
Cl$_2$, quadrupole resonance spectrum, fine structue 9=9849
Cl^{35}, in heterocyclic compds., quadrupole resonance 7=3502
Cl^{36}, mag. moment det. 5=7290
Cl compounds, liquid 6=6845
ClCN, solid, quadrupole coupling 8=6385
claudetite, synthetic, As^{75} pure quadrupole resonance 7=2498
Co, in Co(III) complexes, rel. to absorption spectra 8=309
  f.c.c. metal, Co^{59} resonance 9=12501
Co complex salts, proton and F^{19} resonances, line widths
CoF$_2$ 7=6459 [9=1831
  effect of Co^{59} h.f.s. on F^{19} resonance 9=9840
Co ferrite, multiple resonances 5=8132
CoO, Co^{59} resonance 9=11266
coal, Overhauser effect 9=5920
  proton resonance 5=6591
Cr^{+++}, proton spin relaxation 6=5236, 7197; 9=9835
Cs^{134m}, h.f.s. 5-3002-3, 8164
Cs^{135,137}, quadrupole moments, by double resonance 9=6056
CsF, cosine interaction 5=6359
Cs halides 8=4389
Cu, Knight shift, 1-10 000 kg/cm^2 9=8269
  rolled sheet, Cu^{63} resonance 9=9845
  spin—lattice relaxation 6=3052
Cu ions in soln., electron exchange rate 6=7784
Cu^{++} salts, resonance and relaxation effect of nuclear
  moments 9=2932
  aq. solns., proton spin relaxation 9=9835 [8=3242-3
CuCl$_2$.2H$_2$O, resonance and relaxation 6=3010, 7016;
CuCl$_2$.nH$_2$O, study of antiferromag. and electronic
  structure 8=6049
Cu—Mn alloys 9=13475
  Cu^{63} resonance 9=1881
  dilute 6=6019
  1-100°K 8=4282
Cu—Ni alloys, Cu^{63} resonance 9=1881
CuSO$_4$, soln., relaxation times, spin-echo meas. 9=1708
  transverse relaxation time 6=5309
cyanamides and carbodiimides, isomer discrimination by
  proton and N resonance 9=5117
cyanuryl chloride, Cl^{35} quadrupole spectrum, Zeeman
  effect 9=13487
cyclohexane, solid, proton resonance 9=12494
cyclopentane, solid 9=1880, 12493
D$_2$O—H$_2$O mixtures, self-diffusion of protons 9=11900
dialkylmercury cpds., Hg^{199} and proton resonance 9=7201
p-dibromobenzene, quadrupole coupling, Zeeman splitting
  quadrupole resonance 7=4900 [5=8129
  quadrupole resonance, temp. effect 5=2624 [13486
1,2-dibromoethane, solid, Br quadrupole resonance 9=5956,
p-dichlorobenzene, Cl^{35} pure quadrupole resonance, effect
  of crystal defects 9=12504
  γ-irradiated 6=9034; 7=2778
  new phase, by quadrupole resonance 9=13226
  polymorphism 7=907
  quadrupole resonance 7=4900
  quadrupole resonance, impurity effects 8=8394
  quadrupole resonance, temp. effects 5=2624
  solid solns., Cl^{35} pure quadrupole resonance 8=3463
  structure study 5=638
dichlorocyclohexane, nuclear quadrupole resonance
dichloroethane, quadrupole resonance 9=13485 [9=11269
  relaxation 7=5518
2,3-dimethylbutane, supercooled rotational transition 5=4842
2,2-dimethylbutane solid solns. in 2,3-dimethylbutane 6=5525
2,2-dinitropropane, pressure effects on thermal transition
dioptase, (CuSiO$_3$ H$_2$O)$_6$, proton resonance 9=2984 [9=745

Nuclear magnetic resonance and relaxation - contd

- NH_4 trihydrogen periodate, proton resonance 9=13470
- $NO(SO_3)_2K_2$, by dynamic polarization 8=5288
- Na 5=6334
  - atoms, optically oriented, dipolar, at 3.245 and 12.67 Mc/s 6=1359
  - metal, relaxation, effect of electron—phonon collisions [9=9805
- Na^{23}, elec. moment by atomic beam resonance 5=5587
  - h.f. interaction constants 5=4873
- Na^+ aqueous ions, spin resonance 7=2771
- Na—NH_3 solutions 7=8064
  - N and Na resonances, Knight shift 9=5413
  - 3s-type wave-functions 8=9022
- Na—W bronzes, Na^{23} quadrupole broadening 8=8432
- $NaBH_4$ 5=1094
- $NaBrO_3$, Br line width, quadrupole resonance 7=4630
  - $Br^{79,81}$ resonance, spin—lattice and free induction decay times 9=9842
  - quadrupole resonance, dipolar broadening 9=13488
  - quadrupole resonance, Na interactions 7=3825
  - Zeeman splitting 5=2953
- NaCl, Na^{23} energy levels, ultrasonic excitation 7=2805
  - Na^{23} resonance, dipolar broadening, removal by specimen rotation 9=5948, 13481
  - Na^{23} spin—lattice relaxation, u.s. excited 8=7314
  - nuclear spin saturation by ultrasonics 9=5950
- $NaClO_3$,Cl^{35} pure quadrupole resonance, effect of crystal defects 9=12504
  - $Cl^{35,37}$ pure quadrupole second moments 9=1832
  - neutron-irradiated, quadrupole resonance 8=6386
  - quadrupole resonance, dipolar broadening 9=13488
  - quadrupole resonance, Na interactions 7=3825
  - plus $NaBrO_3$, Cl^{35} pure quadrupole resonance 9=11268
- $NaClO_4$, Cl quadrupole resonance, Zeeman effect 5=429
- $NaH_2PO_4.2H_2O$, Na^{23} resonance spectrum 7=2801
- NaI, I^{127} resonance, dislocation effects 9=12499
- $NaNO_2$, Na resonance 9=12502
  - Na^{23} quadrupole coupling const. 8=6230
- naphthalene, proton resonance 7=6404
- Nd, electron nuclear double resonance 8=7323
- Nd^{147}, alignment 5=3973
- Ni^{++}, aq. solns., proton spin relaxation 9=9835
- $NiBr_2.6H_2O$, proton resonance spectrum 9=11225
- Ni ferrite, ferromag., 1-2 kMc/s 5=2872
- NiZn ferrite, temp. effect 5=381
- nickelocene, proton resonance shifts 7=9791
- nitramide and nitrourethane, proton and N^{14} resonance [7=8083
- nitryl fluoride 7=2501
- nylon 6, γ-irradiation study 9=12498
- O, atomic, Zeeman spectrum 6=235
- O^{17}, chemical shifts 6=1440; 9=7195
- O_2 spectrum, line breadths 5=7842
- n-octane, nucl. resonance, molec. motion 9=12493
- oils, crude, broadening of proton resonances 9=9834
- oxyazoxylbenzenes, proton resonance 9=9309-11
- paraffin hydrocarbons, spin-echo meas. of diffusion 9=7838

Nuclear magnetic resonance and relaxation - contd

- Pb^{204}, γ-ray directional correl. due to interact. with crystalline field 6=3963
- Pb^{207}, chemical shifts in various compounds 8=8391
- Pb cpds., Pb^{207} resonance, anisotropic diamag. shifts [9=11260
- Pd 5=6334
- n-pentane, nucl. resonance, molec. motion 9=12493
- 1,10-phenanthroline and derivatives 9=13480
- phenol, H-bonding 9=10183
- phthalates, proton resonance 9=13469
- polyamides, proton magnetic resonance 5=9803
- poly(butene-1) 9=13220
- polyethylene, irradiated 7=8206, 8246
  - molecular motion 9=9839
  - radiation damage study 8=405
  - relaxation 8=407
- polyethylene deuteroterephthalate, proton resonance, T_1 and T_2 9=13479
- polyisobutylene 6=5293
  - proton resonance, temp., press., effects 9=3985
- poly(pentene-1) 9=13220
- polypropylene, isotactic and atactic forms 8=8433
  - molecular motions 9=4031
  - partially crystalline 9=13220
- polystyrene, dynamic polarization of protons 9=12489
- polytetrafluoroethylene, relaxation 8=407
  - (Teflon), deuteron-irradiated 8=4446
- Pr, h.f.s. 6=1479
- propane, gaseous, in contact with DPPH, Overhauser effect 9=5921
  - liquid, high resolution 8=8392
- trans-propenylbenzene, coupling, five-spin system 9=8367
- propionic acid, proton resonance and molecular association 6=4559
- Pt metal, Pt^{195} resonance, freq. shift, rel. to temp. 9=9844
- pyridine, also deuterated and methylated 6=3071
- pyridine mixtures with acetic acid, phenol, and water, proton resonance 8=9093
- pyrimidines, substituted, quadrupole resonance 9=8370
- quartz, $In^{113,115}$ quadrupole resonance 9=13489
- rare-earth salts, spin—lattice relaxation, possibility of observation 9=9841
- $Rb^{85,87}$, elec. moments from induced atomic transitions [5=4520
  - 5 P state h.f.s., atomic beam det. 6=6853
- RbF, cosine interaction 5=6359
- Rb fluorobate 5=5577
- $Re^{185,187}$, quadrupole resonance 7=9827
- Rh^{103}, mag. moment det. 5=7290
- rubber, natural 8=408
  - resonance, effect of elongation 6=5506
- ruthenocene, proton resonance 9=7199
- SF_6, rel. to structure 8=9094
- $Sb^{121,123}$ 5=3940, 7254
- Sb compds., solid, Sb quadrupole resonance 9=8371
- Sb trihalides and S addition compds., quadrupole resonance [9=9851
- semiquinone ions, proton, h.f.s. 6=4561
- Si, doped, $As^{75,76}$ spin—lattice relaxation times 9=816
  - doped, r.f. orientation of Sb^{122} donors 9=5923
  - doped with $Sb^{121,123}$ electron and nuclear double resonance 9=592
  - electron-nuclear double reson. study, donor wave-functions 9=6266
  - hyperfine splitting of donor states 5=2009, 3773
  - n- and p-type, Si^{29} 7=384
  - polarization of As nuclei 5=2007-8
  - Si^{29} dynamic polarization 9=10019
  - spin resonance of impurity atoms 5=8106
- Si^{29}, polarization in resonance 8=5287
- Si compds., Si^{29} field shifts in various Si cpds. 6=8900
- silica aluminas and gels, dehydrated, proton resonance [9=3984
- Sn, superconducting 9=12500
- $SnBr_4$, quadrupole, crystal structure 7=3509
- tetrabromoethane, solid, proton resonance 7=5513
- tetrachloroethane, solid, proton resonance 7=5513
- thiophene derivatives, spin—spin couplings 9=11533
- thiourea, proton resonance 9=12487
- $TiBr_4$, Br quadrupole resonance in $TiBr_4$ 8=8434
- TiO_2 7=2494
- titanocene dichloride, proton resonance 9=7199
- Tl salts, molten and solid 8=9127
- Tl oxides, $Tl^{203,205}$, theory of spin exchange in solids 5=4830
- TlBr,TlF, double resonance, anomalies, theory 9=13474

Nuclear magnetic resonance and relaxation - contd
  $TlCl_3$,Cl^{35} pure quadrupole coupling 9=1709
  transition metals, solid solns. in Cu and Al 7=8905
  trichloracetic acid, proton m.r. spectra 9=5937
  triethylamine, absence 6=3630
  trifluoro-acetic acid 6=1693
  1,2,3 and 1,3,5-trimethylbenzene, solid, proton resonance
  two Tutton salts, quadrupole interactions 7=2803 [9=12494
  UF_3, ground state 5=6302
  W 5=6334
  W^{183}, mag. moment det. 5=7290
  Xe^{129} gas, spin relaxation, effect of nuclear elec. dipole moment 9=11422
  Zr^{91}, spin and mag. moment 7=6451
Nuclear photo-effect (See Nuclear reactions due to photons).

- Eidophor camera system, theory 8=6881
- "energy optics", image and shadow anal. 9=3255
- error balancing of system plus receiver 8=939
- factor of encircled energy, rel. to diffraction pattern of revolution 9=1244
- fibre systems 7=5950-1, 7708
  - photorefractometer 8=1590
  - transmission of images 5=3541
- focal systems with pseudo-spherical convergence 9=9378
- focusing, effect of atm. press. variations 8=5761
- free surface of liquids as optical element 8=5825
- frequency response 6=6498
  - defocused system 5=7813
  - effect of spherical aberration 9=170
  - function, use of Siemens star 8=5751
  - geometrical-optical calc. 8=942
  - influence of astigmatism 6=2769
  - meas. by random chart 7-8503
  - numerical evaluation 8=1587
  - optical method for meas. 8=3843
  - spherical aberrations, calc. 8=940
  - systems with primary sph. aberration 9=10735
- high-pressure systems 9=1915
- Hüfner rhomboidal prism 5=9534
- Huygens compensating ocular, design calc. 9=3368
- i.r. spectrometer, aberration 6=7267
- image-forming props. 6=7255
  - effect of temp. gradients in the lenses 9=10732
  - practical evaluation 6=7256
- information theory 5=6874, 6875, 9535; 8=5747
- interference optical alignment method 6=1132
- kinetic treatment 5=5966
- lens + photographic emulsion, contrast-transmission functions 6=7253
  - resolving power, rel. to bandwidth 9=3260
- lens system, interferogram eval., dupligramm method [5=3649
- light guide, for radiation pyrometers 9=1385
  - for scintillation counters 9=2252
- light path reversibility 5=6873
  - and Abbe condition 5=6879
- light pointer for null instruments 9=3363
- light transmitted by v. small pinholes 8=1584
- linkage app. for lens eq. soln. 6=3696
- meas. atm. transparency 5=9296
  - i.r. transmittance of flat plates 5=8590
- meridian aberrations, simultaneous correction 5=4497-8
- metal light pipes, i.r. transmission 9=237
- Mylar window for wire explosions 8=8017
- object—image correspondence, better approx. 5=9536
- "objective-emulsion", resolving power 5=4496
- optical autocorrelation meas. of random patterns 8=2091
- optical response origin, location 9=9377
- optical transformation of the general quad. into another [9=3370
- optimal systems 5=2547, 7815, 8580
- phase contrast, appl. to telescope 6=1123
- photographic, definition rel. to sharpness etc. 5=3372
- primary coma, spatial frequency response 9=3257
- projector for clock dial 8=6610
- quality evaluation, in finite polychromatic fields 9=7925
- quasi-symmetrical reflecting objective 9=11985
- radially symmetrical media 9=3256
- raster of cylindrical lenses, for illuminating square surfaces from slit 9=2256
- reduction of scattered light in imaging systems 9=12151
- retinal image movement study 9=10462
- rotating mirror—lens system, for ultra-high-speed camera [9=976
- Schmidt, mirror projection for television 9=5599
- scintillator/photomultiplier coupling, charac. 6=1319
- seventeenth century work (review) 7=207
- shadowgraphs 6=1948
- single refracting surface, asymptotic series for spherical aberrations 8=5753
- spatial freq. response, interferometer meas. 6=1127
- spherical, higher aberration coeffs., calc. 8=5754, 8674-5
- stigmatic system of concentric type 7=8502
- three-lens beam condenser, for i.r. spectrophotometer [9=1276
- toric surfaces, tracing skew rays 5=7816
- transmission factors and design 6=7254
- triplet-type relay lens, power calc. 6=8647
- two-beam interference fringes, image formation 9=7922

Optical systems - contd
- ultrasonic light cell 6=8629
- unit magnification, without Seidel aberrations 9=7929
- vector calculus appl., double reflection system 5=1660
  - refracting system 5=1661
- wave-optical imagery 9=7921
- wide-aperture, best focus, graph. det. 7=218
- zone diaphragm, props. 5=164
- zone plates with phase layers 7=8540
- zoom lenses for television 9=9383

Optics (See also Aberrations, optical; Atmospheric optics; Lenses; Mirrors, etc.; Optical images).
- absorbing crystals 8=932-3
- asymmetries, undiscovered phenomena ? 6=1023
- coherence concept 5=4563
- crystal and stress optics 8=5744
- crystals, non-magnetic, invariant description 9=12153
  - optical indicatrix, study by "extinction curve" 9=7589
- duality principle 5=871
- Fermat's principle, appl. to v.h.f. e.m. waves 7=9280
- free surface of liquids as optical element 8=5825
- German Applied Optics Assn. conference 9=1228
- Gullstrand's eq. deriv. from wavefront curvatures 6=6496
- Hansen's contrib., bibliography 9=10727
- information theory appl. 5=6874-5, 9535
  - bibliography 8=892
  - review 6=7249
- interaction of radiation with cylinder 8=4162
- light paths in inhomog. absorbing isotropic media 5=821
- microwave interpretation of Helmholtz eqn. 7=5481
- "moirage", explanation using Dirac functions 9=4487
- "noise" meas. in photographic emulsions 6=1090-1
- observable quantities 5=1653
- optical contact, polished glass surfaces 7=6629
- optical single side-band transmission 7=208
- optics and microwaves symposium, report 7=4107
- phase and amplitude by phase-contrast anal. 5=3662
- physical optics, demonstration using triodes 6=3796
  - and geometrical, conference (Sydney) 7=6969
  - 25 years progress 7=6056
- propagation in heterogen. isotropic media 9=11976
- quantum optics of metals 7=9589
- recent advances (book) 5=6872
- teaching by microwave interferometer 7=3466
- transition to ray optics 5=163, 4488
- wave and geometrical optics compared by Fourier anal. 8=1583, 5745; 9=1239
- geometrical
  - anisotropic media, one axis of symmetry 5=6876
  - application to microwaves 6=8286
  - automatic ray tracing 7=7714
    - using IBM 704 9=1242
    - using mark-sensing 8=6793
  - axicon images 8=6790
  - beam intensity, Liouville's theorem 8=4769
  - characteristic curves on image-space planes 9=1236
  - compared with wave optics 8=1583, 5745; 9=1239
  - concentric system, with outer shell of const. n 8=7789
  - consequences of parameter invariance 6=1945
  - contrast transfer theory 9=6682
  - doubling of images in telescopes 7=4968
  - equivalence of Huygens and Fermat principles 9=6678
  - extra-axial disk of confusion, rel. to axial correction [9=1253
  - fibre optics 7=5950-1, 7708
  - focal surfaces with pseudo-spherical normal congruence [9=9378
  - focusing of sunlight by ocean waves 8=1373
  - frequency response, of optical system 8=942
    - calc. of spherical aberration 8=940
  - Green's dyad use 9=3354
  - heterog. media, construction from given beam paths 5=6871
  - Hüfner rhomboidal prism 5=9534
  - light path always reversible ? 5=6873
  - linearization of ray-tracing formulae 5=2548
  - matrix algebra, use in object—image transformation [9=1235
  - matrix calculus in paraxial optics 7=216
  - moving dispersive media 7=5952
  - object—image relationships, generalized Helmholtz—Lagrange theorem 9=1240
  - oblique rays, toric and cylindrical surfaces, calc. 5=1663
  - optical path calculations 6=3599
  - optical path concept appl. 8=3841
  - projective formulation 9=1237-8

- Optics - contd
  - geometrical - contd
    - random surface, reflection at, image size distrib. 9=13134
    - ray-tracing, at spherical refracting surface 9=1243

    - polymerization by X-rays 8=6481
    - prod. in h.f. discharges in CH$_4$ 9=13342
    - stopping power for α-rays 7=1566
    - viscous flow relationship 5=2484
  - acetylene/air flames, mass spectra of ions 8=3941
  - acetylene/oxygen mixtures, detonation 6=1165, 1683, 8444;
  - acetylene/O$_2$/N$_2$ flames, ion identification 8=3942 [7=3784
  - acidine, luminescence efficiency 8=7832
    - solutions, luminescence 7=262
  - acridine orange, in gelatin filters, phosphorescence decay curves 9=10839
    - photomagnetic effect 9=5873
  - acridine yellow, in gelatine phosphors, phosphorescence decay curves 9=10839
    - in gelatine, photoluminescence 9=12103 [6=5491
  - acrylamide aq. soln., X-irrad., radical and molec. yields
  - acrylonitrite, radn. chem. polymerization 6=5497
  - alcohols, complex permitivity 7=8586
    - crystal growth 6=8462
    - heats of combustion and formation 5=2264
    - isotope effects at critical temp. 8=7863
    - light scattering in solns. 8=6888
    - liquid, microwave dispersion rel. H-bonding 8=3972
    - long-chain, dynamic surface tension meas. 9=2132
    - long-chain, normal, primary, dielec. dispersion 6=1194
    - long-chain secondary, dielec. effects of H-bonding flaws 9=3422
    - mixtures with ethylene glycol, u.s. vel. and compressibility 5=4450, 5950
    - n-higher, dielec. props., up to 25 k Mc/s 9=9584
    - normal, solid, sp. ht. 6=300
    - primary, normal, dielec. consts. 5=8730
    - primary, press. dependence of sound absorpt. 5=6824
    - primary, proton m.r. and self-diffusion 9=12488
    - solid, irradiation effects 9=7521
    - solid, u.v. irradiated, electron reson. spectra 9=830
    - sorption complexes 9=7472
    - ultrasonic absorption 9=3233
    - vapours, effect on elec. cond. of quartz 8=6964
    - viscosity 7=5907
  - alcohol—argon—air, elec. discharge 8=8796
  - aldehydes, ultrasonic relaxation 6=8053
  - aliphatic ethers, and long-chain ketones, microwave dielec. consts. and losses 7=2162
  - aliphatic alcohols, heat of vaporization rel. to H bond [7=3216
    - mass spectra 7=9739
    - refractometric and gravimetric study 7=2788 [9=12395
  - alkane fragment ions, appearance potl., variations in meas.

Organic compounds - contd

- alkyl acetates, ultrasonic absorption 9=2170
- alkyl halides, liquid, dielec. props. 7=9674
  - viscosities of undercooled liquids 9=3183
- alkyl iodides, u.s. absorpt. 6=7221
- alkyl nitrites, potential energy barrier det., by nucl. mag. resonance 9=7200
- amide ion, in liq. NH$_3$, thermodynamic props. 9=10934
- amidol, in nuclear emulsions, development process 9=8423
- amidosulphonate compds., ion mag. props. 5=6301
- amines, aliphatic, orthobaric density diff., temp. dependence 9=9283
  - association with BF$_3$ 7=3785
  - ionization potentials 7=9247
  - microwave absorption and refraction 8=971
  - straight-chain, sorption complexes 9=7472
- animo acids, paramag. resonance 9=12471
- amino group structure, nuclear resonance study 6=7589
- 3-aminophthalimine, fluorescence quenching 8=986
- 3-aminophthalimide, fluorescence quenching 9=10809
- amphiphilic solutions, proton spectra 9=12497
- amyl acetate, adiabatic piezo-optic coeff. 9=1256
  - n-, visco-electric effect 8=3751
- aniline, association study 5=1586
  - and its methyl derivatives, orthobaric density diff., temp. dependence 9=9283
  - and substituted anilines, mobility of -NH$_2$ group 9=5118
  - substituents orient., free-electron treatment 5=2968
  - ultrasonic absorption 8=2200
  - u.s. absorpt. coeff. 6=1000
  - var. of relaxation time with solvent 9=1413
- aniline—acetic acid reactions 9=8364
- aniline—cyclohexane, u.s. velocity 9=138
- anisaldazine, p-azoxyanisole—p-azoxyphenetole mixture, permittivity 7=5921
- anisoles, Cl substituted, dielectric relaxation 9=12217
- anthracene, α-ray irrad., luminescence yield 9=12122
  - charge-carrier mobility 8=4025
  - crystals, lattice vibrations, temp. depend., calc. 9=7489
  - crystals, response to β-rays 8=988
  - diffusion of excitation energy 9=5149
  - dispersion and absorption of light at 20°K 8=562
  - elec. conductivity 5=2722; 9=1432

  - photoconductivity, neutron irradiation effect 8=7011
  - photo- and semi-conductivity 6=8793
  - photoelectrets 8=3132
  - photovoltaic effect 9=6992
  - scintillation efficiency 6=2002, 2961, 8254
  - scintillation response to electrons 6=1107
  - scintillation response to protons and He ions 5=8645
  - scintillation response, proton and X-ray 5=6048
  - semiconductivity 7=3293
  - single crystal production 7=8259
  - soln., energy transport in fluorescence 9=5566
  - soln. in polystyrene, luminescence 9=12101
  - spectral evidence for trapped excitons, 4°K 6=3623
  - surface cells, range of free carriers 9=10984
  - surface condition effects 7=7773, 7906

Organic compounds - contd

- anthracene, thermal expansion 7=8299
- anthracene derivatives, fluorescence 7=1191
- anthracene—naphthalene mixed crystals, luminescence 7=4215
- anthracene—phenanthrene mixed crystals, structure 9=13956
- antibiotics diffusion, bacterial growth promotion 9=1984
- Apiezon oil, density meas. under gas press. 8=2828
- Araldite D resin, suitability in photoelastic invest. 6=6550
- Arochlor, liquid—glass transition, u.s. velocity 9=135
- aromatic, carbonium ions, photon resonance 9=13471
  - solid, free radical formation during electron bomb. 9=12759
  - small systems in non-crystalline solids, X-ray study 9=13831
  - various compds., phosphorescence, relative quantum efficiencies 9=6764
- asphaltene, absorption and magnetic resonance spectra 9=10775
- p-azoxyanisol, liquid crystals, proton resonance, fine struct. 9=12485
  - polarization, effect on slow neutron scatt. 9=11906
- azulene, anomalous fluorescence 6=4328
  - anomalous light emission 5=8633
  - fluorescence in vapour phase 9=1312
- 5.6-benzacridine-C^{14}, neutron irrad. study 6=6995
- benzene, acoustic absorption 9=5455
  - adsorption on charcoal, thermodynamics 5=6586
  - adsorption on Ge, effect on elec. props. 8=6989-90
  - adsorption on graphite powders, interparticle condensation effects 9=11615
  - adsorption on porous solid, f.p. 8=3933
  - and alkyl benzenes, elec. strength 6=6680
- bromobenzene, dipole moment and relaxation time 9=6897
  - bromobenzene, quadrupole resonance 9=5956
  - chlorobenzene, dipole moment and relaxation time 9=6897
  - chlorobenzene, elec. conductivity 6=5104
  - chlorobenzene, luminescence spectra 9=5573
  - chlorobenzene, solid, proton magnetic resonance 9=5935
  - chlorobenzene, space charge meas. 6=2055
  - crystal lattice vibrations, temp. depend., calc. 9=7489
  - crystals, resonance absorption 9=10713
  - Debye electrolytic effect, absence 8=4505
  - and derivatives, diel. const. and u.v. spectra 7=5178
  - and derivatives, excitation in glow discharge 9=5574
  - and derivatives, react. with Br^{80} 6=3334
  - and derivatives, refraction rel. to temp. 6=1028
  - diamagnetic anisotropy 8=8134
  - diamagnetic anisotropy, non-empirical calc. 5=2857
  - diamagnetic susceptibilities 6=4512, 5249
  - p-dichlorobenzene, effect of X-irrad. on dielec. const. 6=1196
  - p-dichlorobenzene, γ-irradiation 7=2778
  - dielec. props. 5=7941; 6=2854, 7372; 7=4303, 6144
  - effect of shock waves 7=5099
  - effect of X-rays 5=7475
  - emulsions, in water sonic velocity 9=2163
  - exciton bands in crystals 5=1349
  - in glow discharge, behaviour 9=5574, 5756
  - halogen substituted, complex permittivity 7=8586
  - hexachloro-, low-temp. luminescence 5=4550
  - interface area of adsorbed films 7=5914
  - i.r. dispersion 7=5241
  - ionization probability curves near threshold 5=1946
  - isotope effects at critical temp. 8=7863
  - light scattering 7=7033
  - magnetic anisotropy 7=6349
  - molal vol. in soln. 5=787
  - nuclear relaxation at low frequencies 9=12496
  - and other liquids, adsorbed on C, nuclear polarization 8=7315
  - paramag. resonance in triplet state, calc. 9=9816
  - Rayleigh's ratio for light scattering 5=2643; 6=1136
  - rotary spin echoes 9=12483
  - single crystal prep. 7=6694
  - second virial coeff. 8=3789; 9=5641
  - solubility in water 9=11902
  - surface tension 5=7738
  - surface tension at critical point 9=9296
  - surface tension and ht. of vaporization calc. 6=1887
  - surface tension/temp. rel. 6=114
  - T to S transition in low-temp. luminescence 5=6937
  - thermal cond., elec. field effect 8=3916
  - thermoluminescence 6=1117
  - trisubstituted, proton resonance 9=13473
  - u.s. absorption 5=2154, 5280; 6=2749-50, 7231; 8=3816

Organic compounds - contd
benzene, u.s. vel., 18°C to b.pt. 5=7768
  u.s. vel. and absorpt., high press. 6=4262
  vapour, electric strength 9=8184
  viscosity 7=6928
  viscosity and density near freezing pt. 9=81
  viscosity eqn., limiting spec. vol. 8=2836
benzene—CCl_4 solutions, b.pt. rel. to conc. 6=4241
  ultrasonic absorption 9=5456
benzoic acid, diamag. susceptibility and H bond 8=4141
  solutions, u.s. studies 9=2164
  u.s. velocity in, empirical formulae 9=1190
benzophenone, dipole moment and relaxation time 9=6897
  elastic dielectric and piezoelec. props 8=5860
  growth and evaporation 8=4524
  light scatt. 7=7034
  and nitromethane in non-polar solvents, dielectric properties 6=8163
  relaxation processes and scattering of light 8=1000
p-benzosemiquinone radicals, substituted, paramag. resonance 9=8335
benzyl alcohol, relaxation time, rel. to solvent 9=1413
  soln., in CS_2, dielec. relax. time, rel. to viscosity
benzyl benzoate, acoustic birefringence 8=4907 [9=13245
biacetyl, luminescence, rel. to press. and wavelength 9=12099
bianthrone, coloration by electron irradiation 7=9951
  free radicals in H_2SO_4, paramag. resonance 9=9818
bromoform, rotational constants, discrepancy 5=2943-4
α-bromonaphthalene in CCl_4, dielectric relaxation 9=5666
butadiene, conjugation and polar effects 9=7456
butane, α-particle energy loss per ion pair 6=3953
  n-solubility of Hg in 8=3772
  small-angle X-ray scattering 7=7947
  stopping power for α-rays 7=1556
  2,3-dimethyl-, supercooled, nuclear reson. during transition 5=4842
butanol, tertiary, dil. soln. in cyclohexane, polymerism
  n-, critical constants 5=8699 [9=5453
  t-, H-bonding 9=10183
  t-in water, temp. dependence 9=12194
butyl, sec- radicals, decomposition 9=7563 [9=6882
n-butyl alcohol-glycerol, u.h.f. dielec. const. and loss
butyl stearate, diel. loss and phase change 7=6154
1-butyne, n.m.r. spectrum 9=13478
butyric acid, u.s. absorption and relaxation freq. 9=145
butyryl peroxide, ht. of combustion 7=9666
$C_4Cl_3F_7$ microwave dielec. const. 6=2854
camphor, polymorphic crystal transformation 8=1018
  and derivs., dielec. loss and dispersion 6=8762
  fenchone, thiophen, pyridine, diel. loss 7=6153
  vaporization of spheres in air current 9=12178
caproamide, electron irradiation effects 8=8509
caprolactam, electron irradiation effects 8=8509
  ϵ-, substituted, structure and polymerization 9=6337
carbohydrates, chemical composition 9=8984
  effect of γ-rays 7=834
carbon tetrachloride, anomalous dispersion of 10 kc/s e.m. waves 8=249
  alpha-particle energy loss per ion pair 6=3953
  d.c. conductivity 7=6180
  dielec. props. 7=4303
  effect on h.f. breakdown of air 7=6145, 7846
  effect of shock waves 7=5099
  elec. conductivity 6=364
  Faraday effect 8=3011
  heat transfer, effect of elec. field 9=3378
  i.r. dispersion 7=5241
  internal pressure 6=116
  potential distrib. between d.c. electrodes 6=1188
  radiolysis in alcohols 7=1711
  Rayleigh's ratio 6=1136
  refractive index meas. 8=7790
  second virial coeff. 5=5941
  self-diffusion 5=5264
  surface tension at critical point 9=9296
  thermal conductivity 7=6089
  thermodynamic properties, 298.16-6000°K 9=2289
  u.s. absorption 5=2514
  u.s. vel. and absorpt., high press. 6=4262
  u.s. vel. and losses, temp. and press. effects 8=2892
  u.s. wave distortion 9=1183, 1185

Organic compounds - contd
carbon tetrachloride, viscosity limiting spec. vol. 8=2836
carbon tetrafluoride, i.r. dispersion 9=3267
  ioniz. and attachment coeff. and breakdown 8=2373
  solid, compressibility and density 9=885
carbonyl molecules, ionization potential 7=2359
carboxymethyl cellulose, aq. solution, viscosity meas.
carnauba wax, electrets, props. of 7=4308, 7084 [7=5101
  electrical conductivity 7=4322
  heterocharge formation 9=12225
β-carotene, photoconductivity, cis-trans isomerism 9=9654
  photoconductivity, visual colour discrim. analogy 8=7012
castor oil, diel. props. at high pressures 6=8166
  pre-breakdown mechanism 6=6602
  u.s. absorption 6=4914; 8=3813
  wave motion and birefringence 7=300
catalase, radiosensitivity, effect of OH radical 6=6229
  irradiation inactivation by oxidizing radicals 6=6230
"Cellophane", birefringence 7=6078
celluloid films, effect on charge of transmitted ion beams
  inhomogeneities 8=105 [8=5986
cetyl alcohol, effect of monolayers on H_2O evaporation 9=260, 6840
chlophenoel, vap. press. rel. temp. 8=3936
chloral hydrate soln., X-ray irrad. study 6=5483
chlorallene, e.s.r. 9=9833
chlorides, electrolysis in liq. SO_2 7=822
chlorofluorohydrocarbons, gases, elec. breakdown 9=7019
  oils, thermal cond. 8=3924
chloroform, Faraday effect 8=3011
  heat transfer, effect of elec. field 9=3378
  isotope effects at critical temp. 8=7863
  second virial coeff. 5=5941
chloroform—NH_3 mixtures, microwave absorpt. 8=4185
chloroform—toluene—nitrobenzene mixtures, u.s. absorption 9=5456
o-chlorophenol, u.s. absorpt. coeff. 6=1000
chlorophylls, luminescence 9=12100
  photoconductivity 8=3135
  reversible flash bleaching 6=2508
  sensitization of semiconductors by photoelectric effect 9=4576
chlorosulphonic acids, dielec. const., meas. by "force" method 9=3417
chronic methylamine alum, paramagn. resonance 6=8279
cinnamic acid, diamag. susceptibility and H bond 8=4141
citric acid and salts, diamag. suscept. 8=4142
collagen, molec. structure 8=3590
collodion as replica matl. for metallurgy 6=2474-5
copper acetonylacetone, mag. and thermodyn. props. 9=2287
copper phthalocyanine—benzidine yellow, spectrophotometric behaviour 9=6755
coumarin derivatives, as liq. scintillator 9=3689
cresols, vapour pressures, 0-40°C and 110-200°C 9=259
cyclobutene, thermodynamic functions 8=3055
cyclohexane, dielec. constant 5=7941
  dielec. relax. studies of derivatives 6=5846
  elec. cond. 7=6179
  heat transfer, effect of elec. field 9=3378
  irradiation effects 6=7791; 8=6485
  nuclear mag. resonance 9=12494
cyclohexanol, adiabatic piezo-optic coeff. 9=1256
  r.f. dielectric dispersion 7=4309
cyclohexanone, solid, dielec. behaviour 5=4626
cyclo-octatetraene, Hg-photosensitized reaction 6=7789
  radiation stability 8=8508
cyclopentane, nuclear resonance absorption 9=12493
  vapour heat capacity 9=2870
cyclopentene, nuclear mag. resonance in solid 9=1880
cyclopentene oxide, microwave spectroscopic struct. det. 5=4537
cyclopropane, as G.M. counter filling gas 6=5962
  and cyclopropane-t, isomerization rates 6=4057
  gas, acoustic absorption 8=923
  isomerization mechanism 7=2762
  ultrasonic relaxation 9=13102
DNA, rotary dispersion 8=2265
decane, interface area of adsorbed films 7=5914
  sonic vel., 20-45°C 8=6738
dehydrodianthrone, phototropic effect 9=5598
dialkyl mercury cpds., nucl. mag. resonance 9=7201
dialkyl phosphoric acids, diffusion in n-decane 6=960

Organic compounds - contd
  dianthrone, chromic isomerism 6=2522
  diaryl—nitric oxide radicals, paramag. resonance 9=5918
  diazomethane, photolysis in A and N matrices 9=5531
  1,2-dibromoethane, quadrupole resonance 9=5956, 13486
  n-dibutylphthalate, vap. press. rel. temp. 8=3936
  dicarboxylic acids, dynamic surface tension meas. 9=2132
  9,10-dichloroanthracene, fluorescence, temp. dependence
  dichlorocyclohexane, n.m.r. 9=11269 [9=6764
  dichlorodifluoromethane, viscosity eqn., limiting spec. vol. 8=2836
  dideuteroethylene, NO catalyzed isomerization 6=1690-1
  diethylamine decomposition by 12 MeV electrons 7=3793
  7-diethylamino-4-methyl coumarin in toluene, liq. scint. phosphor 6=4330
  di(2-ethylhexyl) sodium sulphosuccinate, soln. in n-dodecane X-ray scattering 9=5227
  diglycine manganous chloride dyhydrate, ferroelec. props.
  diglycine nitrate, ferroelectricity 9=2304 [8=7883
  2,4-dihydroxybenzoic acid, decarboxylation in H_2O and D_2O, kinetic isotope effect 9=6343
  $4,4^1$-dimethoxy-azoxybenzene, degree of ordering, test of molecular theory of nematic liquid crystal state 9=4349
  2(p-dimethylaminophenyl) benzthiazole in toluene, liq. scint. phosphor 6=4330
  dimethyl ether pyrolysis 6=7775
  dimethylmercury, decomposition kinetics 9=7565-6
  dimethyl peroxide, photolysis 7=828
  dioctylphthalate aerosols, acoustic coagulation 9=11960
  dioxane, adsorbed on porous solid, f.p. 8=3933
    dielectric properties 7=6144
    effect of vapour on Ge p—n junctions 8=8778
  diphenyl, thermal expansion 7=8300
    thermoluminescence 6=1117
  diphenyl ether, in benzene, dielectric relaxation 9=12217
    dielectric relaxation 6=5846
  diphenyl picryl hydrazil (DPPH), free radicals, paramag. resonance 9=2936, 9818
    and other free radicals, electron free precession 9=11251
    paramag. resonance 6=485; 8=7518
    paramagnetic resonance line widths of derivatives
    radiolysis 6=5484-5 [9=9812
  dodecane, sonic vel., 20-45°C 8=6738
  durene, thermal cond., elec. field effect 8=3916
  duroquinone, reduction, free radical formation 9=10168
  dyes, aggregation, phosphorescence enhancement 8=6879
    dark conductivity 9=5722
    molecular patterns in field emission microscope 9=5810
    photoconductivity 8=8780
    photoconductivity, effect of O_2 9=3505
    photoconductivity, effect of temp. 9=5723
    photographic desensitization 8=2726
    solutions, fluorescence, concentration quenching, and elec. cond. 9=10825
  eosin, in Plexiglas, polarization of fluorescence 8=3889
  epoxy resins, vacuum properties 9=7860
  ethane, adsorption on metal films 9=6312
    average ionization energy 8=3195
    critical state investigation by u.s. 9=9557
    electron-irradiation, chemical decomposition 9=8969
    gas, ionization by β-particles 8=8845
    intermolec. forces 6=5273
    negative ion formation 5=2827
    photolysis 6=4065
    reaction with methyl radicals 5=9206
    small-angle X-ray scattering 7=7947
    solid, compressibility and density 9=885
    stopping power for α-rays 7=1556
    viscosity and intermolecular potential 8=7473
  ethane derivatives, chloroethane—NH_3 gas mixtures, dielec. const. 7=4301
    dichloroethane, dielectric constant 5=7941 [5=4449
    1,1 and 1,2 dichloroethane, vapours, u.s. dispersion
    trichloroethane, thermodynamic props 7=7837-8
  ether, Faraday effect 8=3011
    heat transfer, effect of elec. field 9=3378
    solid, irradiation effects 9=7521
    surface tension 6=113; 9=9296
  ethyl acetate, acoustic absorption, crit. review 8=7775
    adiabatic piezo-optic coeff. 9=1256
    surface tension at critical point 9=9296
    u.h.f. dielectric props. 6=4382

Organic compounds - contd
  ethyl acetate, u.s. absorption and relaxation 7=5138;
    u.s. velocity in critical region 7=3081 [8=2199,7774
  ethyl alcohol, adsorption on Ge, effect on elec. props. 8=6989-90
    α-particle energy loss per ion pair 6=3953
    aqueous soln., u.s. absorption 8=3814
    in c.r.t. screens, effect on brightness 8=2983
    complex dielec. const. 8=1668
    dielectric props. 8=604
    effect of shock waves 7=5099
    effect of γ-irradiation on H exchange 7=2775
    equation of state and u.s. absorption 7=5920
    Faraday effect 8=3011
    reaction with I_2 8=6490
    thermal conductivity 7=6089
    u.s. absorption 8=544
    ultrasonic cavitation, under CO_2 pressure 8=6692
    vap. press. rel. to viscosity 5=96
    vapour, adsorbed on solids, dielec. const. 9=6885
  ethyl alcohol—water, u.s. absorption and velocity 9=1205
  ethyl anthranilate, liquid, scintillation props. toluene dilution 9=10859
  ethyl bromide, photolysis 7=5702
    photolysis, C^{13} and D isotope effects 9=8965
    pyrolysis, mech. 6=1674-5
  ethyl cellulose solns., viscosity, rel. to temp. 9=4334
  ethyl chloride, adsorbed on silica gel and TiO_2, dielectric props. 7=1255
    dielectric dispersion, 1.34-1.44 cm^{-1} 9=1414
    dielectric properties 8=3062
    electric susceptibility 7=5297
    X-band susceptibility rel. to pressure 9=9585
  ethyl cinnamate, acoustic birefringence 8=4907 [5=4838
  ethyl cyanide, molec. struct. and thermodynamic props.
  ethyl formate, u.s. dispersion and absorpt., rotational isomerism 8=8643
  ethyl iodide, irradiated, ion—molecule reactions 9=13877
  ethylamine, dielec. props. 6=3706
    ionization potentials, electron impact 9=8263
  ethylene, adsorption on silica glass 7=6669
    average ionization energy 8=3195
    deuterated mass spectra 5=1343
    energy per ion pair 5=7153
    Hg-photosensitized decomp. 5=5015, 8350
    isotopic effects in Hg photosensitized decomp. 6=4066
    photoionization efficiencies and cross-sections 5=9564
    reaction with methyl radicals 9=1920
    refractive index, virial coeff. calc. 8=4850
    sat. vap. press. and thermomolec. press differences
    second virial coeff. 7=166 [5=9609
    solid, compressibility and density 9=885
    stopping power for α-rays 7=1556
    u.s. wave velocity 7=6958 [9=7128
  ethylene—O_2 mixtures, low-energy electron attachment
  ethylene derivatives, dibromoethylene, cis and trans isomers, props. 7=5192
    dichloroethylene, cis-trans isomerization 7=9943
    perchlorethylene, refractometric and gravimetric study 7=2787
    trans-fluorodichloroethylene, thermodyn. props. and spectra 7=5197
  ethylene diamine, adsorbed on porous solid, f.p. 8=3933
  ethylene diamine tartrate, crystal growing tech. 5=10059;
    heat conductivities 8=3018 [7=7489
    piezoelectricity 6=7388
    pyroelectric const. 9=12227
    torsional vibrations 5=4439
  ethylene glycol, electrolysis by bubble migration 6=6993
    viscosity and mol. structure 9=6571
  ethylene oxide, decomposition at high temps. 9=10346
  eugenol, dielec. props. rel. to press. 6=1193
  fatty acids, diffusion in n-decane 6=960
    films, refractive index 8=3848
    ulteasonic absorption 9=2170
  ferrocene, proton resonance 9=7199
  fluoroscein, absorption of light 7=5206
    activated, e.s.r. 9=5906
    in boric acid, luminescence 8=3883, 5788 [9=9478
    in boric acid, luminescence decay, depend. on prep.
    in boron phosphors, luminescence spectra in decay
    fluorescence yield 6=7301 [9=10836

Organic compounds - contd
fluorescein, luminescence efficiency 8=7832
  polarization, in solution of fluorescence 8=2974
  quenching in solutions 8=986, 7835
fluorescein—glucose, fluorescence yield 9=211
fluorides, liquid isochores 9=10939
fluorocarbon gas bubble chamber 9=11324
fluorotoluenes, isomeric, fluorescence and emission spectra 8=3892
formaldehyde, bond moments 5=4536
  gas phase oxidation 5=9202
  photodecomposition 6=4723
formic acid, radiolysis in solution 5=5481; 8=2698
  solid, γ-irradiated, paramag. species 5=4798
  and deuteroformic acid ions, dissociation by collision with molecules of various gases 9=4756
Freons, mixtures, use in bubble chambers 8=1802
  Freon-12, thermodynamic props. 9=3410
  ultrasonic props. 7=3088
  use in bubble chambers 9=501
furfural, thermal-neutron diffusion lengths 6=6179
glycerine (glycerol), cavitation threshold 6=1886
  degassing by ultrasound 5=3520
  dielec. props. rel. to press. 6=1193; 7=3232
  dielec. relaxation time rel. to viscosity 5=1798
  liquid—glass transition, u.s. velocity 9=135
  relaxation processes and scattering of light 8=1000
  shear and compressional relaxation 8=2909
  thermal conductivity 7=6089
  thermal conductivity rel. to acoust. dispersion, density, sp. ht. 5=2457
  u.s. relaxation under press. 7=5136
  u.s. velocity meas. 5=5958
  viscosity and molecular structure 9=6571
  volume viscosity 8=8648
glycerine—vaseline oil, acoustic streaming 8=3829
glycerine—water, microscopic eddying 9=9287
glycine, aqueous solution, radiolysis 6=5479
  diffusion coeff. meas. 8=3770
  radiolysis in solution 7=1710
$(glycine)_3.H_2SO_4$, ferroelec. phase, structure 9=13958
glycine silver nitrate, ferroelectricity 8=166
glycine sulphate, ferroelec. cpds. 8=3069
glycine sulphate and selenate, ferroelectric props. 7=2170
guanidine aluminium sulphate, cell size and elastic props. 9=12829
  ferroelectric props. 5=6109; 6=2065, 5070, 7384; 8=167,
  linear coeff., 0-80°C 9=12175 [805
  optical props. of growing crystals 9=5239
  single crystals prep. 7=8258
guanidine vanadium sulphate new ferroelectric 6=5069
haemin, optical props. 7=5236
haemoglobin, paramag. resonance 6=5233
haloallenes, proton magnetic resonance 9=9833
halo-ethylene vapours, ultrasonic dispersion 6=2741
halogenated ethanes, C_p calc. 6=5055
halogenated methanes, C_p calc. 6=5055
  dielec. const. and losses, microwave 6=4872
  gases, sound dispersion 9=3225
  CCl_2F_2, shock wave structure 6=5731
  CH_3Br, microwave absorpt. and dispersion 6=2853
  CH_3F, heat of formation 6=4052
halogenated methyl cyanides, thermodynamic props. 7=9147
heptane, liquid, elec. strength meas. 5=5395
  n-, mass spectrum, fragment line intensity 8=3202
  in styrofoam shell, as microwave lens 9=2537 [8=4507
hexabromoethane, n-irrad., recoil fragments recomb.
γ-hexachlorocyclohexane, γ-irradiation effects 7=829
n-hexane, conduction and breakdown 6=363
  decomp. by electrons and γ-rays 7=6667
  elec. conduction 8=615
  electric strength 5=5395; 6=313; 9=6770
  electron drift mobility 9=7035
  field emission 6=7458
  irradiation effects 6=7791
  nuclear resonance absorption 9=12493
  refractive index, virial coeff. calc. 8=4850
  vapour, ultrasonic studies 9=144
n-hexanol solutions, in n-hexane, diel. props. 9=12215
Hg dimethyl, pyrolysis 8=4504
Hg diphenyl, vapour press. and heat of sublimation 8=3938
hydrocarbons, acetylenic, mag. susceptibility calc. 6=5508

Organic compounds - contd
hydrocarbons, aliphatic, molec. mag. susceptibility 8=5101
  allene, mag. susceptibility calc. 6=8457
  aromatic, delayed fluorescence 8=2976
  aromatic, diamag. susceptibility 9=11191
  aromatic, elec. conductivity 6=3873
  aromatic, fluorescence transfer 6=3874, 5791
  aromatic, photocond. and fluorescence 8=4025
  aromatic, photocond. and semiconductivity 7=3300
  cell theory of liquids 7=147
  electrification by friction 7=337
  ethylenic, mag. susceptibility calc. 6=5507
  flames, ion mass spectra 8=6917
  gases, electric strength 7=2265
  gases, electric strength and molecular structure 9=326
  gases, electric strength, molecular structure and u.v. spectra 9=4644
  gases, specific primary ionization 6=4466
  gases, transport props. 5=8552
  high molec. wt., compressibility 9=1121
  higher, viscosity, temp.—pressure—structure effects
  higher, viscosity, pressure effects 9=1123 [9=5395
  liquids, refractive indices 7=4122
  proton resonance, C^{13} splittings 9=12490
  saturated, elec. breakdown 6=5129
  saturated, gases, elec. strength 7=2266
  saturated, long-chain, irradiation effects 9=5168
  saturated, mass spectra 9=6356
  time lags in elec. breakdown 6=2143
  ultrasonic absorption 9=2170
  unsaturated, elec. strength 7=7935
  unsaturated, gases, electric strength 8=200
  unsaturated, ionization potentials 7=9738
  u.v. irrad., paramag. resonance of trapped radicals
  zero-point energy, rel. to structure 9=12737 [9=9817
hydroxylamine hydrochloride, breakdown in shielding windows 6=3341
hydrozoic acid decomposition products, E.P.R. spectra
I—solvent complexes 7=6674-6 [9=11246
illuminating gas, h.p. elec. discharge, space—charge field emission 9=7032
indigo, photoconductivity, temp. dependence 9=8149
inks, for penetrant methods of crack detection 8=4609
isobutyl alcohol vapour, effect on ice crystal growth 8=4523
isobutyl alcohol—n-propyl bromide, u.h.f. dielec. const. and loss 9=6882
isobutyric acid—water, u.s. velocity 9=138
isobutyryl peroxide, decomposition kinetics 9=1918-19
keratin, effect of strain on electrical resist. 9=3516
  α-, exchange reaction 9=892, 8948
kerosene spray, evaporation of 8=3034
ketones, dielectric measurements 6=4385
  Kerr effect 9=5669
  solid, irradiation effects 9=7521
  u.s. absorption 9=4391
lanosterol, dielec. properties 9=13253
maleates, proton resonance 9=13469
melamine, as X-ray detector 5=6197
mesitylene, Kerr electro-opt. effect 8=3079 [9=13417
metallo-organic, diamag. susceptibilities of metal atoms
  loaded scintillators, luminescent efficiencies 9=3329
  in plastic scintillators 9=4471
metallo—toluene scintillators 9=3330
methane, adsorbed monolayer transitions 8=4510-12
  adsorption on metal films 9=6312
  adsorption on silica glass 7=6669
  alpha-particle energy loss per ion pair 6=3953
  burning velocity 6=7347-8
  CD_4, three solid phases, theory 9=9555 [5=5557
  CD_3Br, CH_3Br, rotat. const. and thermodynam. props.
  $CHBrF_2$, $CDBrF_2$, molec. const. and thermodynamic props. 5=5556
  $CHCl_3$, i.r. dispersion 7=5241
  CH_2DBr, CHD_2Br, molec. const. and thermodynamic props. 5=5555
  CH_3F, CH_3Cl, CH_3Br, CH_3I, mass spectra 5=5480
  $CHFBr_2$, molec. const. and thermodynamic props. 5=5558
  compressibility, virial coeff. and intermolec. forces
  crystalline, convex-core model 9=13768 [9=112
  decomp. in elec. discharge 6=1700
  decomp. in l.p. glow discharge 5=2828

Organic compounds - contd
methane and deuteromethanes, vapour pressures 6=3678
  diamag. susceptibility 5=9755
  electron avalanches, exponential increase 9=12401
  electron—irradiation, chemical decomposition 9=8969
  energy per ion pair 5=7153
  exp. six potl. and props. 5=5939
  explosion with air, flame propag 7=1705
  fire damp interferometer calibration 9=3342
  fragmentation by electron impact 8=8835
  h.f. discharges 9=13342
  halomethane mixtures, u.s. dispersion 7=5127
  methane, ionization and dissoc. by electron impact [5=1011
  ionization by electron impact 8=2366
  neg. ion formation, mass spectrum 5=2827
  nuclear magnetic resonance 8=5512
  phase changes in solid under pressure 8=431
  reaction with CH_4^+ 8=6473
  reaction with I^{128} 7=4838
  reaction with methyl radicals 5=9206
  reaction with nitrogen dioxide 6=1686
  self-diffusion in solid 7=6633
  shock wave structure 6=5731
  small-angle X-ray scattering 7=7947
  specific heat ratio, under pressure 5=1785
  static elec. breakdown, current inc. 8=7062
  stopping power for deuterons and protons 5=7139
  thermal decomposition 7=5697
  Townsend discharge statistics 8=7131
  u.s. velocity, absorption and dispersion 8=546
  u.s. velocity at high press. and temp. 7=176
  u.s. velocity, rel. to temp. and press. 5=2506
  vap. press. temp.-dependence det., C^{13} appl. 5=1758
  viscosity and intermolecular potential 8=7473
  viscous flow relationship 5=2484
methane—argon liq. mixtures, thermodynamic props. 9=4537
methane, bromo-, mixture with NH_3 gas, dielec. const. 7=4301
methane—CO system, 90.67°K, thermodynam. props. 5=9468
methyl acetate, adiabatic piezo-optic coeff. 9=1256
  photolysis 8=1361-2
methyl alcohol, aqueous solutions, u.s. absorption 8=3814
  complex dielec. const. 8=1668
  decomposition by γ-rays 5=3229-30
  dielectric props. 8=604
  Faraday effect 8=3011
  H-bonding 9=10183
  reaction with I_2 8=6490
  u.s. absorption 8=544
  u.s. dispersion in vapour 5=2507
  vapour, adsorbed on solids, dielec. const. 9=6885
methyl and ethyl alcohols, crit. supersat. meas., vapours 6=2830
methyl and isobutyl alcohols, dielec. consts. in soln. 6=1190
methyl anthranilate, liquid, scintillation props., toluene dilution 9=10859
methyl bromide, photolysis, C^{13} and D isotope effects 9=8965
methyl chloride, ultrasonic relaxation 9=13102
  X-band susceptibility, rel. to pressure 9=9585 [9=6881
methyl ethers, long-chain, crystalline, dielec. absorption
methyl, ethyl acetate and formate, ultrasonic absorption 6-8021
methyl formate, surface tension at critical point 9=9296
methyl homologues, 2nd virial coeffs. 9=5641
methyl iodide, irradiated, ion—molecule reactions 9=13877
methyl ketones, long-chain, crystalline, dielec. absorption 9=6881
methyl naphthalene, β, screw dislocations, formation [9=10228
  thermal cond., elec. field effect 8=3916
methyl nitrite, photolysis 9=6350
methyl salicylate, ref. liquid in composition of Ilford GC emulsion 9=14005
methylamine, dielec. props. 6=3706
methylamines, ionization potentials, electron impact 9=8263
methylene blue, adsorpt. on pos. Hg surface 6=5502
  decoloration by electrons 8=6483
  use in dosimetry 9=11322
methylene chloride, dielec. props. 6=3706
  specific heat, u.s. study 7=3053
monoalkyl phosphates, radiolysis in aq. soln. 6=5496
monocarboxylic acids, crystal growth 6=8462
monochlorobenzene, surface tension at critical point 9=9296

Organic compounds - contd
myristic acid, surface tension 6=3525
N compounds, proton resonances 8=7318
Na carboxymethyl cellulose, effect on mech. strength of ice 8=4483
Na salicylate, luminescent quantum yield 9=213 [8=3889
naphthacene, in Plexiglas, polarizarion of fluorescence
naphthacene—anthracene solid soln., luminesc. 7=7013
naphthalene, crystal lattice vibrations, temp. depend. calc. 9=7489
  degradation of photoluminescence 8=8703
  delayed fluorescence at 4°K 9=212
  and derivatives, phosphorescence spectra 5=860
  diamagnetism of powdered sample 6=5248
  in durol, luminescence spectrum 5=5339
  elec. conductivity rel. to temp. 9=1432
  electron energy band gaps 9=6984
  electronic states of crystals 5=10071
  fault formation under compression 9=12840
  fluorescence decay processes 9=12114
  kinetics of a free exciton 9=12793
  luminescence 9=1303
  luminescence, effect of anthracene impurity 8=6870
  luminescence, quantum yield 7=1196
  luminescence at 20°K 6=5009, 7311
  luminescence of vapour, β-excitation 7=9638
  long time phosphorescence 5=6034
  optically-excited excitons, anisotropy 8=9115
  origin of homocharge in electrets 5=2712
  polarized phosphorescence 9=3315
  positron lifetime, effect of melting 6=8754
  single crystal production 7=8259
  spiral dislocation formation 7=8261
  spiral growth 8=3564
  thermal cond., elec. field effect 8=3916
  thermodynamic props., calc. 5=2946
  vaporization of spheres in air current 9=12178
naphthalene—anthracene soln., luminesc. quantum effic. 8=6865, 6871
β-naphthol dissociation energy 8=4373
β-naphthylamine, fluoresc. quenching by O and NO 6=8690
α-naphthylboric acid scintillator 8=3276
neopentane, refractive index, virial coeff. calc. 8=4850
  2nd virial coeff. 7=166
nitroaminostilbenes, simult. Raman and fluorescence emission 9=1296
nitrobenzene, dielectric const. 5=7941
  dielectric properties 6=4385, 6593, 8758
  dipole moment and relaxation time 9=6897
  effect of vapour on Ge p—n junctions 8=8778
  Kerr constant 7=3246
nitrobenzene—CS_2 soln., dielec. relax. time, rel. to viscosity 9=13245 [6=7189
nitrobenzene—hexane, thermal diffusion at critical soln.
nitrocellulose films, effect of electron bomb. 8=5492
nitromethane, detonation 6=4716, 9008; 7=816; 8=433
  photolysis 9=6350
o-nitrophenol, dielec. props. 7=4304
n-octane, nuclear resonance absorption 9=12493
  sonic vel., 20-45°C 8=6738
Octoil, vap. press. rel. temp. 8=3936
oils, crude, broadening of proton resonance 9=9834
  crude, combustion, in underground reservoir 9=12849
  oils, and greases, for vacuum, vap. press. data 8=6915
  high-b.p., diffusion of water vapour in 8=7746
  insulating, elec. breakdown, effect of contaminants [9=4658
  Soviet diffusion-pump, vap. press. 8=3936
  transformer, dielectric breakdown 9=11083
  transformer, thermal cond., elec. field effect 8=3916
  transformer, u.s. absorption, 18.5°K-67.3°C 8=3812
olefines, ionization potentials 9=7117
  reaction rates with O atoms 9=4086
  sulphuric acid systems, colour 6=9024
oleic acid, thermal cond., elec. field effect 8=3914-16
organic glasses, elastic properties 7=2741
organo-boron scintillators 8=3276
organo-metallic solids, X-irradiation effects 6=8452
organo-silicon cpds., prep. and mag. props. 7=6679
organol, optical props. of thin films 8=4896
oxalic acid, aqueous, action of ionizing radn. 6=5495
  and salts, diamag. suscept. 8=4142 [9=9309-11
oxyazoxybenzenes (liquid crystals), proton mag. resonance

Organic compounds - contd

- palmitic acid, anomalous nonlinear sound dispersion 6=4912
  - thermal cond., elec. field effect 8=3914
  - u.s. vel., 95-55°C 5=7768
  - ultrasonic dispersion 9=141
- parachlorotoluene, solid-state fluorescence 6=8114
- paradichlorobenzene, new phae change 9=13226
- paraffins, b.pt. and crit. temp. 6=2039
  - blocks, fast neutron reflection 8=4230
  - branched, ionization potentials 9=7117
  - crystal, temp.rise due to electron irrad. 6=5942
  - diamag. susceptibility 9=11190
  - diffusion 9=3208; 7838
  - elec. conductivity rel. to temp. 9=1432
  - elec. strength and liquid structure 7=6231
  - liquids, sound vel. calc. 9=139
  - n- liquids, theory 5=5923
  - oil, mechanical losses 8=1344
  - powder suspension, dielec. const. 8=3064
  - solid, irradiation effects 8=2699
  - sp. ht., empirical calc. 6=8745
  - thermal cond., elec. field effect 8=3916
  - viscosity 7=5907
  - viscosity, temp. variation 9=2120
- paraffin wax, optical films, absorption meas. 9=12139
  - solidification in d.c. field, residual charge 9=5663
- paraffin wax—carbonyl iron, e.m. wave propag. 8=7208
- pentaborane-d_9, vapour pressure 7=5716
- pentaerythritol, crystallization 6=7802
  - internal double reflection 9=7612
- penta-methyl-benzene, thermal cond., elec. field effect 8=3916
- n-pentane, nuclear resonance absorption 9=12493
  - radiation-induced cavitation 9=10659
  - surface tension 6=113
- peptides, e.s.r. 9=12471
- perfluoromethylcyclohexane, m.p. and phase equilib. 6=3330
- perylene free radicals in H_2SO_4, paramag. resonance 9=9818
- petroleum, kinematic viscosity meas. 9=82
- phenanthrene, first electron excited state 9=5148
  - polarized phosphorescence 9=3315
- 1,10-phenanthroline and derivatives, nucl. mag. resonance 9=13480
- phenol, H-bonding 9=10183
  - heats of combustion and formation 5=2264
  - with intramolec. H bonds, dielec. absorpt. 5=4859
  - solutions, dielectric props. 9=12218
  - vapour pressures, 0.40°C and 110-200°C 9=259
  - in water, u.s. velocity 9=138
- phenyltri-p-biphenylylsilane, as scintillator 8=4891
- phthalates, proton resonance 9=13469
- phthalic acid, in B phosphors, luminescence spectra in decay 9=10836
  - solutions, u.s. studies 9=2164
- phthalimide, vapour, fluorescence 7=269
- phthalimide derivatives, luminesc. yield rel. to temp. 6=6531
  - derivatives, quenching of fluorescdnce 8=2984
- phthalocyanines, elec. and optical props. 7=5338
  - photoconductivity 7=4364, 9697
- propane, small-angle X-ray scattering 7=7947
  - solid, compressibility and density 9=885
  - solubility of Hg in 8=3772
  - stopping power for α-rays 7=1556
  - u.s. velocity, 585 kc/s, critical-state region 5=2505
  - u.s. velocity at high press. and temp. 7=176
  - u.s. velocity, rel. to temp. and press. 5=2504
- propane—air flames 8=1020
- propane—air mixtures, ignition in brush discharge 9=12320
- propane—O mixtures, detonation limits 6=1683
- propional peroxide, ht. of combustion 7=9666
- propionic acid, He-ion radiolysis 7=9445
  - ultrasonic dispersion 8=1561
- n-propyl alcohol (propanol), anomalous dispersion of 10^4 c/s e.m. waves 8=249
  - aq. soln., u.s. absorption 8=3814
  - dielec. props. 7=3232
  - effect of deuteration on dielectric relaxation 9=8077
  - ethyl alcohol mixtures, ultrasonic absorption 9=5456
  - ht. of vaporization 7=7837
  - ultrasonic relaxation 6=1914
- n-propyl bromide, (n,γ) reaction yields 5=10035
- propylene, formation, isotropic effects 7=6659
  - ionization probability curves near threshold 5=1946
  - solid, compressibility and density 9=885

Organic compounds - contd

- propylene, stopping power for α-rays 7=1556
- propyne, ionization potential 6=5184
- Pyralene, Kerr effect, -5 to +90°C 9=13270
- pyranthone, photoconductivity 7=9200
- pyridine, addition cpd. with $SeOCl_2$, structure 9=13937
  - second virial coefficient 9=5641
  - substituted, quadrupole resonance and C-Cl bond study 9=8370
  - thermal cond. 8=3924
- pyrogallol, paramag. resonance in oxidized solns. 6=1386
- pyrrole, dielec. const. and association 5=7007
  - polymerization 7=6660
- pyrrolidine, thermodynamic props. 9=12198
- p-quaterphenyl, luminescence and dosimetry 9=13521
- quinine and quinidine salts, ionization and luminescence 6=5008
- quinine sulphate, dehydration 9=5795
- quinine sulphate polyiodide (herapathite) dichroism 9=13164
- quinones, methylic affinity 6=8445
- resins, blocks, u.s. standing-wave patterns 9=4379
  - for bonding optical comp. to metal 9=236
- rhodamine, B, in glucose and collodium, anti-Stokes fluorescence 8=3888
  - 5G, fluorescence quenching 9=10809
- rosin and talc-rosin mixtures, diel. props. 9=2302
- ruthenocene, proton resonance 9=7199
- salicylic acid, diamag. suscept. and H bond 9=4141
  - in phosphors, luminescence spectra in decay 9=10836
  - solutions, u.s. studies 9=2164
- salol, relaxation processes and scattering of light 8=1000
- sebaconitrile, vapour pressure 7=317
- silk derivatives, shape and size of macromolecules 6=8432
- soaps, formation, X-ray diffr. study 7=6670
- spiropyran, coloration by electron irradiation 7=9951
- starch, solution, u.s. diffraction of light 8=4904
- stearic acid, surface tension 6=3525
  - thermal cond., elec. field effect 8=3914
- stilbene, dichroism 8=6863
  - internal double reflection 9=7612
  - luminescence, quenching and enhancing 9=12104
  - photocond., rel. to crystal orient. 6=2116
  - proton and X-ray scint. response 5=6048
  - scintillation phosphor 6=2961
  - trans-stilbene, fluorescence excitation 6=245
- styrene, energy loss and range of electrons and positrons, tables 6=8236
- succinic acid, heat of combustion 5=5380
- sucrose—glucose—water system, diffusion coefficients 7=3054
- T.N.T., liquid, Hugonist from shock wave study 9=6860
- T.N.T.—picnic acid system, viscosity and density 7=3042
- tartaric acid and salts, diamag. suscept. 8=4142
- terphenyl, fluorescence excitation 6=245
  - 1%, in Plexiglass, fluorescence 9=4673
  - resistance to heat and radiation 7=9447
  - scint. phosphor 6=2961
  - in toluene, fluorescence 8=4888
  - in toluene, scintillation decay time 9=4474
  - viscosity, effect of irradiation 8=7727
- tetracene, in anthracene, polarized fluorescence 8=7833
  - crystals, fluorescence, temp. dependence 9=6764
  - photo-conductivity 5=8774-5
  - solutions, fluorescence 9=5566
- tetradecane, liquid, elec. strength meas. 5=5395
  - sonic vel. 20-45°C 8=6738
- tetraisoamyl ammonium purate, in benzene 9=9671
- tetraphenylbutadiene and p-terphenyl, in polystyrene, use in dosimetry 8=1917
- thiacyclohexane, solid, complex dielec. const. 6=7375
- thio-cpd. free radicals in H_2SO_4, paramag. resonance 9=9818
- thioctic acid, photolysis, quantum yield 6=761
- thiourea, new ferroelectri 7=2159
  - proton resonance spectra 9=12487
- titanocene dichloride, proton resonance 9=7199
- tobacco mosaic virus, colloidal, particle shape by X-ray scatt. 9=7040

Organic compounds - contd
- tobacco smoke particles, dipole moments 6=7794
- tolane, dichroism 8=6863
  - luminescence 7=1196
- toluene, alcohol solution, frozen, structure 9=11635
  - bromo- and ortho- toluenes, luminescence 7=6033
  - p-chlorotoluene, frozen, fluorescence intensity study
  - dielec props. 7=6144 [7=271
  - heat transfer, effect of elec. field 9=3378
  - reactions with $Hg(^3P_1)$ 5=6567
  - thermal conductivity 7=6089
  - thermal cond., elec. field effect 8=3916
  - thermoluminescence 6=1117
  - u.s. absorption 5=2514, 2517; 6=999; 8=544
  - viscosity 7=5907
- trans-1,4 dichlorocyclohexane isomers, dynamic equilib., crystall. phase 6=1715 [9=8367
- trans-propenylbenzene, proton mag. resonance spectrum
- triacetin, light-scattering, λ-dependence 9=9525
  - relaxation processes and scattering of light 8=1000
- tributyl phosphate degradation by ioniz. radn. 7=9952
- trichloracetic acid, proton magnetic resonance spectra 9 5937
- triethylamine, coexistence curve with water 7=7825
  - liq., u.s. relaxation processes 7=1144
  - 1.34-4.17 Mc/s - 55^0 to $+35^{\circ}$C 9=1204
  - soln. in Nujol, dielec. absorpt. 6=1198
  - u.s. absorption and vel. rel. to pressure 8=2197 [6=1693
- trifluoroacetic acid, nuclear mag. reson. and dissociation
- trifluoromethyl halides, ionization and dissoc., electron impact 6=7493
- triglycine fluoberyllate, ferroelec. props. 8=5861
  - polarization reversal 9=5657
- triglycine sulphate, crystal growth and props. 9=13257-9
  - dielec. props., elec. field dependence 9=13254
  - dielec. props., 2nd-order ferroelec. transition 9=5656
  - elastic and piezoelec. constants 9=13268
  - electron bombard. effects 9=345
  - ferroelec. coercive field, rel. to temp. and freq. 8=8748
  - ferroelectric props. 8=5861; 9=13256
  - ferroelec. props., irradiation damage effects 9=4551
  - polarization reversal 9=5657, 8070, 13255
  - pressure induced phase transitions 9=12845
  - thermal expansion 9=13218
- trimethylbenzene, entropy, heat capacity and heats of fusion 8=160
  - 123- and 135-, nuclear mag. resonance 9=12494
- trimethylene disulphide (1,2-dithiolane) photolysis, quantum yield 6=761
- trimethylphenyl ammonium chloride and iodide, conductances in soln. 5=8346
- tri-p-methoxy phenyl methyl perchlorate, optical and elec. props. 9=8854
- triphenyl methane dyes, ionization 7=6673
- triphenyl methyl azide, optical and elec. props. 9=8854
- triphenyl-p-biphenylylsilane, as scintillator 8=4891
- uranyl oxalate, explosion initiation by ionizing radiations
- vaseline, dielectric breakdown 9=11083 [8=7581
  - interaction of two acoustic waves 8=4807
  - oil, ultrasonic waves 7=1131
  - oil, viscosity in lubrication 8=4498
- vinyl chloride, polymerization by γ-rays 6=8453
- vinylidene chloride, thermodynamic props. 9=6861
- violanthrone, photocond. 7=9200
- viscose solutions, viscosity calc. 9=84
- Wurster's blue ion, paramag. resonance spectrum 9=7183
- X-irradiation effects on simple solid cpds. 6=8451
- xylene, light diffraction in, by u.s. waves 9=2246
  - m- , u.s. absorption 5=2514
  - p- , adsorbed on porous solid, f.p. 8=3933
  - p- , thermoluminescence 6=1117
  - pre-breakdown mechanism 6=6602
  - u.s. absorption 6=2749-50

Oscillations (See also Electromagnetic oscillations; Liquid oscillations, Piezoelectric oscillations; Vibrations).
- acoustic, of gauze-tone type, from burner 5=122
- adiabatic, in liq. HeII 5=4597
- aerofoil surfaces, at transonic flow 8=3783
- chemical reaction rate determination by oscillating processes 9=6344
- collective, of a shell struct. of particles 6=6066
- connected self-oscill. systems 7=5933

Oscillations - contd
- coupled, demonstration using pendulums 8=87
- d.c. flow discharges 7=7942
- damped, Rayleigh's principle appl. 5=5290
- degenerate electron gas 9=2090
- even-order subharmonic oscillations 7=1973
- forced, damped oscill., quantitative expt. 6=4253
  - in elastic-plastic system 9=5200
  - non-linear restoring force 7=1127
  - non-linear system 7=6951-2
- free, in variable-parameter resonant system 7=168
- frequency-entrained, fine structure of response 8=8631
- gas column, nonlinear 8=6730

    neutral, injection into thermonuclear machines 9=10146
    neutron production 9=4748
    shock-wave study 9=12329
    thermonuclear 8=4330
  D—T mixtures, energy yield 9=5080
  Fe XIV, ionization in hot plasma 9=8255
  graphite, i.r. absorption effects 9=2925
  H, Balmer lines, Stark broadening 8=4867
    degenerate ionized, thermodynamic potential 9=9732
    deionization rate 9=11168
    electron impact cross-sections 7=2278
    fully ionized, shock-wave structure 9=1552
    in h.f. discharge 5=5428
    high-power discharger, optical emission 8=8005
    ionization state and radiation from impurity gases 9=5837
    ionized, electron mobility 9=5840
  He, characteristics 8=3193
    electron impact cross-sections 7=2278
    ionization and ohmic heating 9=1555
  inert gases, electron temp., instability and hysteresis 9=9791
    striations 9=4645
  Hg, arc, l.p., oscill. and growing waves 8=5070
    discharge, microwave scattering 9=1612
    l.p. characteristics 7=5361
    l.p. discharge, several electron groups, charac. plasma
      size 6=5905
  N, ions from l.p. discharge 9=2444
    thermal cond., calc. (25000°K) and meas. (13000°K) 9=10900
  Ne, non-isothermal, pulse discharge 5=307
  Si, microplasma, fluctuations 9=8110
  Xe, high-pressure, elec. and thermal cond. 9=7106
Plasma oscillations
  circularly polarized e.m. modes 8=2431
  cold plasma, collective oscillations 9=2442
    frictionless, soln. of eqns. of motion 9=7114
    in a magnetic field 9=8252
    nonlinear 9=4741
  collective behaviour, theory 8=885
    motion in a system of quasiparticles 9=9210
  collision of two highly ionized gas clouds 9=2002
  collision-free hydromagnetic waves 8=3263
  in confined heated plasma 9=358
  Coulomb force effects in semiconductors, charge screening 9=5676
  current—voltage behaviour 9=2430
  cylinder, in a.c.field, motion 7=9709
    natural modes in long. mag. field 7=7238
  cylindrical cavity, wave propag. criteria 9=9869
  cylindrical mag. tube of force 8=1136
  in degenerate electron gas 8=1833; 9=5834
  in degenerate electron liquid, dispersion relation 9=8831
    longitudinal waves 9=2090
  with diffusion in velocity space 9=2436
  diffusion vibrations, in gas discharges 8=3158
  discharge, under const. axial mag. field 9=8253
  in discharge tubes 8=5989
  disintegrating aseous discharge, microwave investigation 9=1549,3598
  dispersion equations 6=2177, 8287
  e.m. oscillations 7=1338, 3465, 4562, 5482
  e.m. radiation due to coupling 6=8886

Plasma oscillations - contd
  in electron beams 5=8092; 8=4067
  in electron-beam-excited plasma, dispersion relations
    and decay 9=2429
  in electron beam—plasma interactions oscill. intensity 9=2434
  electron cloud, in external fields 9=8258
  electron drifts, dissipation by instabilities 9=13401
  electron excitation spectrum in periodic field of ions 5=394
  electron interactions in crystals, generalized Bohm—
    Pines' theory 9=6245
  electron plasma oscillations 6=6033, 8223; 7=1338, 3465
    7=4401-2, 9217
    in d.c. mag. field 8=4165
    h.f. 5=4697
    at high density 8=300-400
    non-linear effects 8=3198
    resonator, theory and application 8=4166
    spectroscopic study 5=8799
    spectrum, effect of Coulomb correl. 9=4750
    rel. to solar radio noise 6=501
    transit time relations 9=1547
    in uniform elec. field 8=3265
  electron velocity, in alt. elec. and const. mag. fields 5=9783
    Einstein's momentum principle 8=5994
  excitation, of oscillations 5=1066
    of standing waves 9=4747
    of stratification waves in positive columns 9=12332

  - photoemission 7=6185
  - photo-induced Hall effect of V-centres 6=3740
  - plastic deformation and annealing, effect on optical props. 8=577
  - polaron energy bands 8=5471

Potassium compounds - contd
  KI, solutions, chem. effect of ultrasonics 5=6844
    specific heat, calc. 9=13236
    thermal expansion, low-temp, anomaly 6=2828
    u.v. effect on i.r. absorpt. 5=8392
    V-centres 5=3271
    X-ray prod. of colour centres 7=4896
  KI:Tl, behaviour under C ion bomb. 7=5231
    colour centres 9=7516
    elec. conductivity 7=6173
    fluorescence decay time, rel. to particle ionization
    scintillation charac. 5=857 [9=13182
  $K_3InCl_6.2H_2O$—Mo^{5+}, antiferromag., isotopic effects 9=8324
  $KMgCrO_8.7\frac{1}{2}H_2O$, Cr valency, mag. study 6=2243
  $K_3Mn(CN)_6$, mag. susceptibility 5=1999
  KNO_3, capture of impurities during crystallization 7=7486
    crystallization, liquid inclusions 9=12863
    polymorphic transition, dielec. props. 9=9582
    as solvent for $Pb(NO_3)_2$ 7=6937
    thermal expansion 5=9607
    trigonal, thermal expansion and cell const. 9=4518
  KNO_3—$NaNO_3$, molten, elec. conductivity 7=3790
  $KNbO_3$, growth of single crystals 8=2704
    ferroelec. props. 6=2066
  $KNBO_3$—$KTaO_3$, solid solns., ferroelec. transitions 9=6890
  KO_2, paramag. resonance 5=5517
  K_2O, effect of elec. cond. of PbO 8=6962
  KOH, gaseous species 8=7130
    solutions, compressibility 7=5906
  K pentaborate, proton resonance 9=8363
  K phosphate, ferroelec., dielec. const. 6=3708
  K platino-cyanide, luminescence 6=8112
  KSCN, density, above m.p. 8=7728
  K_2SO_4, acoustic velocity 9=9321
    polymorphic transformation 6=7007
  $K_2S^*O_4$—SO_3, isotope exchange, S^{35} radioactivity 9=12847
  K silicate, binder in c.r.t. screen 8=2983
Powders (See also Granular structure; Particle size; Sintering; Surface measurement).
  atmospheric dust, thermal precipitator exam. 5=10104
  Bragg scattering, multiple, diffuse pattern 9=9019
  density meas. by gas burette 5=5905
  diffuse reflection from 6=8110
  effective dielec. const. 6=6590
  electroscopic, for delineation of semiconductor junctions
  fatigue, app. for study of 8=3525 [9=12248
  gyro ball mill 6=3418
  heats of adsorption and isotherms, interparticle condensation effects 9=11615
  in Kundt's tube, electrification 9=2183
  luminescence, meas. in vacuo 5=1718
    self-absorption 7=1197
  magnetic properties, review 7=6338
  magnetic, single domain, shape distrib. 8=8888
  magnetic susceptibility, effect of crystal field and spin—orbit coupling 9=5872
  mechanical testing in transition region 9=1907
  metal, prep. in inert atm. 7=989
    sintered, mech. props. 7=6648-9
  methods of dispersing on microscope slids 5=1270
  mine-drilling dust, particle size 8=2039
  as nuclear emulsion fillers 9=8422
  photoelectric particle counting 7=7445
  powder layers, fluorescence 6=7302
  reflection spectra, Kubelka—Munk function 9=2236
  sand-like substances, axially symmetric motion 9=9267
  scattering of light by single particles 7=299
  spectrochemical analysis 7=6682
  spectrophotometry, diffuse reflectance meas., in u.v.
    by meas. reflection coeff. 8=566 [9=10776
  suspensions, in fluids, flow 7=6630
    in paraffin, dielec. const, 8=3064
  thermal conductivity 9=9550
  alkali halides, compressed pellets, colour centres 8=3466
  Cu, elec resistivity, at var. bulk densities 9=4568, 6906
  carbides, atomization energy 6=6985
  coke, elec. resistivity, at var. bulk densities 9=4568, 6906
  Fe oxide micropowders, coercive force at low temp. 9=437
  γ-Fe_2O_3, for sound-recording tapes, remanence curve 5=8896
  graphite, effects of compression and flash sintering 8=623
  KCl, compressed, X-ray analysis 7=3841

Powders - contd
  MgO, heat capacity at 1.5-4°K 9=6855
  Mn—Bi, compacted, mag. props. 9=9787
    ferromagnetic, props. and structure 9=417-18
  Ni, annealing 7=4815
    crystal growth and coercive forces 5=7499
  nitrides, atomization energy 6=6985
  PbS, PbSe, PbTe, photoelec. props. 8=7019
  Pr ethylsulphate, thermal and mag. props. 9=8281
  $PrCl_3.nH_2O$, specific heats 9=12192
  Pr_6O_{11} films, optical properties 9=6308
  quartz, mixed with gases, thermal cond., 0-300°C 9=13211
  Re nitride, superconductivity 9=11045 [8=4818
  rust, coagulated to emulsified seawater, by ultrasonics
  sulphide powders, two-stage optical excitation 9=10824
  Ti borides, carbides and nitrides, props. 7=1673
  U, metallurgy 9=13985
  UO_2, as flowing fuel in nuclear reactor 9=11497
  W, borides, carbides and nitrides, props. 7=1673
  ZnO, elec. resistivity 9=6983
    photocond., elec. field effect 8=7961
  Zr borides, carbides, and nitrides, props. 7=1673
Praseodymium
  excited states of ions in crystls 5=3011
  magnetic susceptibility 7=7225
  metal, preparation 5=1995
  paramagnetic resonance absorpt. at cm wavelengths 5=1058
  phase changes 7=2121
Praseodymium compounds
  PrB_6, photoelec. work function 5=7969
  $PrCl_3$, paramag. reson. absorpt. in $LaCl_3$ 5=2005
  Pr ferrite, paramagnetism 6=3013
  PrMg nitrate, paramag. resonance 5=5518
  $PrTi_2O_7$, mag. susceptibility 8=3248
  $PrVO_3$, mag. susceptibility 8=3247
Pressure (See also Atmospheric pressure; High-pressure phenomena and effects; Radiation pressure; Vapour pressure).
  accurate relative pressures, 20-200 mm Hg 8=5672
  balance, in plasma immobilized by mag. field 5=4693
  distrib. between metal and rubber rollers 8=2829
  effect, on energy levels of crystal 6=515
    on magnetization of ferromagnetics 8=8139
    on photog. emulsions 5=9331
  field in homog. anisotropic turbulence 6=1897
  fluctuating, on cylinder in air stream 8=3786
  hydrodynam. and thermodynam., and 2nd. viscosity 5=89
  hydrostatic, effect on conductivity of homopolar semiconductors 9=10972
  liquids, internal 6=112
    lattice cell theory 6=6421
  in monatomic gas, radn. tensors appl. 7=1150
  near spherical blast, time dependence 8=8645
  on plate due to turbulent flow, fluctuations 6=4886
  regulator for continuous-flow ionization chamber 6=5168
  solids, dependence of self-diffusion const. 9=8883
  substitute pressure in isothermal processes 7=2149
  thermal production of high pressures 8=2862
  thrust on piston-driven half-open tube 5=6821
  in unipolar ionic conduction, due to drag effects 9=8265
  on wall due to gas jet impact 6=4883
  Ag halides, effect on absorption edge 9=4457
  Ga, liquid, negative 7=5265
  Ge, effect on optical absorption edge 9=3301
  H_2O, effect on thermal conductivity 9=6827
  LiH, metallic transition at high pr. 9=6276
  in rubber, due to sharp projections, rel. to tyre skid
  Si, effect on elec. resistivity 5=7024 [8=4499
    effect on optical absorption edge 9=3301
  in water, effect on cavitation 8=2840
    negative, det. by max. superheating 5=8693
  Zn, mag. props., effect of omnidirectional pressure 8=1778
Pressure measurement (See also Manometers; Vacuum gauges; Vapour pressure measurement).
  absolute, high, new method 5=8529
  air, from corona discharge currents 7=3313
  automatic recorder for gaseous reaction study 5=2454
  $BaTiO_3$ transducer, for fluctuating press. 5-5 x 10^4 c/s 8=8606
  blood pressure, requirements of press. transducers
  capsule-type gauge, 0-20 mm Hg 8=1545 [6=6275

  cinematographic optical pyrometry for time and spatial temp. var. 6=3691
  colour temperature, meter, direct-reading 9=2190
  disappearing filament, ambient temp. influence 5=6992

Pyrometers - contd
  disappearing filament, contrasting plates for accurate adjust 9=1386
  full radiation type, for 0-100°C 9=3400
  gas-filled thermoelectric 5=6090
  for gases at high pressure 7=2138
  high-speed radiation type 6=2045
  i.r. radiation 5=5374
  immersion radiator, blackbody temp. at gold-point, calc. 9=6852
  in industry, selection and installation 9=6851
  light guide radiation type 9=1385
  low temp. pyrometry 8=157
  for meas. glass surface-temp. 5=5373
  optical, accuracy in range 800-4000°C 9=2285
    below red heat 8=158
    photometry and use below 800°C 9=3401
    recording, 1300-3000°C 9=6853
    standard, construction and calibration 5=1781
  photoelectric, for flame colour temp. 8=3949
    spectropyrometer 7=330
  photographic with colour-separation camera 9=9561
  pneumatic 5=6991
  radiation, accuracy factors 5=4603
    humidity infl. on temp. meas. 7=1237
  Venturi pneumatic, for gas and flame temp. 8=3048
  W ribbon, brightness-temp. props. 5=1657

Radioactivity - contd
Ho^{166}*, study of Er^{166} excited states 9=13615
I, effective half-lives in human body 9=11696
  natural short-lived isotopes 7=2618
I^{131}, effect on $\frac{1}{2}$ life of Co^{60} γ-rays in H_2O vapour 9=3853
  international standard comparisons 6=1506
  removal from air by adsorption 8=5511
In^{113}*,^{115}*, internal conversion study 5=3972
Ir(7-sec), correction 5=475
Ir^{196} 9=10050
K, natural number of γ-quanta 6=3136
  specific activity 9=8541
K^{40,42}, branching ratio 5=6423, 8184
limerstone, presence of Be^{10} produced by cosmic rays 9=595
Li^{4}, tests for existence 9=11737
Li^{8}, polarization of β^--rays 9=3858
Lu^{176}, natural 5=9854
Mn^{56}, β-decay energy 9=6055
Mo^{90} isomeric states 5=4915
Na, clearance from calf-muscle, meas. 8=6564
Na^{22,24}, mg Ra equivalents 9=13635
Na^{24}, decay, electron—neutrino correlation 9=8539
  international standard comparisons 6=1506
  Nb^{90} isomeric states 5=4915
Nd, natural 5=482, 1143
No, production 8=317
  10 min isotope 8=6236-7
O^{16}, electron—positron pair transition 9=5006
Os, from Re-containing molybdenite 5=473
Os^{184,187} natural 5=1143
P^{32}, international standard comparison 6=1506
  positrons per β-decay 6=3954
P^{32,33}, in rainwater 7=8325
Pa^{234}(UX$_2$), γ—β branching ratio 5=2108
Pb ('ordinary'), isotope ratio 5=6408
Pb^{205} 9=2733
Pb^{210}(RaD), emission of neutrons and long-range particles 8=5292-3
  γ-ray and X-ray abs. intensities 5=493
  γ-rays 6=6875
  prep. by separation from RaD and RaE mixture 8=1942
Pb^{214} in nuclear emulsions 9=3702
Pd^{112} γ-rays 5=4912
pitchblende, resonance capture of neutrons 7=8168
Pm, absence of stable nuclides, theory 5=8984
Po, emission of long-range particles and neutrons 8=1230, 3328, 5293
  long range particles 7=2584
  long range protons not due to Al 7=6489
  from N^{14} bombardment of Pt 7=3632
  use to intensity spectra line photographs 9=5288
Po^{210}, α—e$^-$ coincidences 5=9859
  branching ratio 5=4021
  use in elec. generator, miniature (SNAP III) 9=7310
Pr, neutron-deficient, activities 5=1146
Pt, natural 5=482
Pu^{+3}, in LaCl$_3$, fluorescence spectrum 7=1202
Pu^{239} fission products 9=12641
  long-range particles 6=3147; 8=1230, 5293
Pu oxide, use for calorimeter calibration 9=1389
Ra, emission of long-range particles 8=5293
  solution standards, at N.B.S., preparation 9=5030
  specific activity 9=6065
  standards comparison 7=8118
Ra—α—Be, neutron source 9=8464
Ra^{226}, absolute intensity from coincidences 7=3591
RaB → RaC, β transformation 9=3865
RaD and F, in atmosphere as meas. of aerosol stability 9=7584
RaD sources, emulsion study 9=6490
RaE, preparation of β-standards 9=3694
Rb, light isotope 7=8121
Rb^{86}, branching ratios 5=6423
Rh^{106m} 5=5609
Re^{181} 8=8287
Re^{184,187}, natural 5=1143, 9854
Re^{190} 5=9033
Ru^{103,106} radiations, absorption in Al 7=644
S^{35}, effect on K$_2$S*O$_4$—SO$_3$ isotope exchange 9=12847
  K—electron ejection in β-decay, meas. 5=2139
  in rainwater 7=4519
Sb^{126} isomers 9=3837
Sc^{42} 8=5294
Sc^{46}, mg Ra equivalents 9=13635

Radioactivity - contd
Sn^{125}, coincidences rel. to decay scheme 7=3597
Sr isotopes in U fission 5=3116
Sr^{87}*, internal conversion study 6=3972
Sr^{90}, from fall out, distribution 9=4153
Sr^{90} + Y^{90}, international standards comparisons 6=1506
T, decay energy 8=2540, 9=13640
  terrestrial, decay rate and origin 9=9092
Ta natural isotope, probably radioactive 5=3986-7
Ta^{180}, natural 8=5298
Ta^{181}, directional correl. measurements 5=9844
Ta^{181m}, gyromagnetic ratio 5=442
Ta^{183,185} 5=6418
Tb neutron-deficient activities, survey 5=9848
Tb^{152} 9=10059
Tc, absence of stable nuclides, theory 5=8984
  natural occurrence 6=8341
Tc^{98}, natural occurrence 4=2114, 9847; 6=5511
Th, active-deposit elements, L-Auger electrons 6=4623
  active deposit, emulsion study 6=585
  α-decay, internal, conversion line broadening 6=2378
  emission of long-range particles 8=5293
Th^{228}, absolute intensity from coincidences 7=3591
Tl^{208}(ThC^{11}) 2.615 MeV γ-rays 5=3105
Tm^{166}, study of Er^{166} excited states 9=13615
Tm^{170}, appl. to diagnostic radiography 5=1422
  appl. to industrial radiography 5=1430, 9335
  use for medical radiography 7=1824
U, emission of long-range particles 8=5293
  foils 6=8430
  minerals, multiplication constant 7=4689
U^{233,235} fission products 9=12641
U^{238} family, distrib of decomposition elements in emulsion 8=7329
V, natural 7=9350
V^{50}, natural 8=5298
V^{51}*, internal conversion study 6=3972
V^{53}, 23-hour, evidence of non-existence 6=587
W^{183m,185m} 5=6418
Xe^{133}—Cs^{133}, charge spectrometry 9=3851
artificial production (See also Nuclear reactions).
  advances due to radioact. isotope availability 6=582-3
  choice of irradiation time 5=1172
  history and rel. to nuclear studies 6=581, 1503
  by irradiation of solids 7=3741
  using linear accelerators 8=754
  nomogram for buildup and decay 5=6409
  100^{256} 5-7314
  radioactive ref. sources, prep. tech. 5=6410
  recoil separation method, γ- and d-bombardment 7=6529
  short-lived nuclides prod. by synchrocyclotron, study method 5=1144
  Ac, sep. from AcK(Fr^{223}) by paper chromatography 5=2291
  Ag^{104} 6=610
  Am^{241} 5=9901
  As^{76} enrichment by hot-atom effect 8=6283
  At$^{203,205,210-11}$ by p bomb. and α or Li capture 9=2787
  Au, by p bomb. of Bi 9=2790
  Bi radionuclide by p bombardment of Bi 9=2790
  Br^{80}, isomeric nuclei after neutron capt., retention diff. 6=668
  C^{15}, by C^{14}(d,p)C^{15} reaction 7=3587
  Cd^{104} 6=610
  Cd^{119,121} from (d,αp) reactions on Sn^{122,124} 9=3848
  Ce, carrier-free, prep. method 5=5071
  Ce^{143}(33 hr), pile neutron capt. cross-section 7=721
  Cl^{40} 7-649
  Co^{60}, enrichment by atom recoil 5=3081
  CuI sources, I^{131} half-life value 5=6419
  Fe^{61} 6=2345
  Fm$^{250-2}$, prod. by α on Cf^{249} 7=6491
  Fm^{252} 6=6108
  Ga^{74} 7=649
  Hf^{183}, by n-bomb. of W 7=651
  Hg, by p bombardment of Bi 9=2790
  Hg^{194,195,197}, by Au(p,n) reactions 9=12670
  Hg^{203}, v. high activity, Szilard—Chalmers prep. 7=2617
  K^{76,77,79} by p on Br^{79} 5=3047
  Li^{8}, from proton bombardment of metals 9=8585
  Md 5=7357
  Mn^{56}, enrichment, recoil atom method 5=3081
  N^{16} from bombardment of nuclei with N^{14} 9=13675
  Nb^{94} 5=9852

Radiochemistry (See also Chemical analysis, radioactive; Chemical effects of radiations; Radioactive tracers).
  at Berkeley (California), recent developments 9=2718
  disposal of radioactive wastes 5=3082
  fission yield fine struct. data, mass region 99=106 5=1218
  heavy element fission, protons 5=9916 [6=2514
  molecule excit. and dissoc. due to constituent atom decay
  neutron-deficient chain study, noble metal region 5=7350
  π^-/μ^- meson, ratio analysis 5=2213
  pulse anal. in heavy-element region 5=8863
  radiochem. anal., γ-ray spectrometer use 5=6443
  radiochem. purity recognition 5=5698
  relative efficiencies of mixed pile radn. and γ-rays 5=602
  reprocessing reactor fuels 5=5648
  residual conc.of daughter subst. removed by bimolec. reaction 8=9044
  reverse isotopic effect in condensation 6=1681
  separation technique for rare earths 7=9376
  simult. det., radiochem. mixtures 6=8459
  structural factors influencing radiolytic behaviour, aliphatic alcohols 5=1333
  Szilard—Chalmers effect on bromine derivatives 7=8921
    in chronic acid and sulphate 6=6237
  Ac, microchem. prep. of β-sources 8=4653 [5=2291
    separation from AcK(Fr^{223}) by paper chromatography

Radiochemistry - contd
- Al, radioactive, extraction from Mg 8=1240
- Am^{241} isolation 5=9901
- As^{76} enrichment by hot-atom effect 8=6283
- Ba det. in biological material 5=8375
- Be^{10}, search as U^{235} fission product 6=3242
- Bi, study of high-energy proton fission 5=9917
- Br, isolation of fission fragments 8=1984
  - Br^{80} from isomer trans., reaction with benzene and dervis. 6=3334
- Br and I, fission fragments separation 9=6146
- C^{14}, bond rupture and nonrupture beta decay 6=2513
- Ce det. in fission prod. 5=5071
- Co$^{56-58}$, carrier-free, separation from Mn target 5=2161
- Cs, radionuclide det. in fission-prod. mixtures 6=6243
- Cu, spallation cross-sections det. 5=8231
  - Cu^{62}, carrier free preparation by recoil reaction 5=9090
- Eu, microchem. prep. of β-sources 7=4653
- Ge^{73m}, separation 8=2537
- HBr^{80m}, bond ru=ture, after isomeric transition 9=1924
- Hg^{203}, v. high activity, Czilard—Chalmers prep. 7=2617
- I, hot atom chem., recoil energy effects 7=3794
  - I^{131}, radioactive, separation from Te 5=4043
  - I^{132}, production, separation techniques 5=499
- Mo, separation from fission products 7=9944
  - Mo^{99} analysis of fission fragments 8=6339
- N^{15}, 99.8%, prep. by chem. exchange 6=6095
- Na det. by neutron activation 5=3249
- Nb^{94} separation from Ta 5=9852
- Np^{239} sep. from U_3O_8 and Np^{239} source prep. 6=7651
- P^{32}, separation method 5=5620
- Pb, interaction with 0.6-3.0 BeV proton studies 6=7677
- Pm^{147}, prep. of v. high purity 7=2596
- RaD and RaE, chromatographic separation 6=6875
- Sn^{130} separation from irrad. U 5=4863
- Sr, det. in biological material 5=8375
- T, recovery from ion accelerators 5=9903
- Tc, detection 6=8341
  - Tc^{98}, separation technique 5=9847
- Th^{232}, meas. of excit. functions for (p,f) reactions in Th^{232}, U^{235} and U^{238} 5=1183
- Tl^{195,197,198m}, separation in study 6=2346
- U, natural fission rate meas. 5=3045
  - U^{235,238}, meas. of excit. functions for (p,f) reactions [5=1183
  - U^{238}, fission rate det. and I isotope sep. 7=2618
  - U^{238}, high-energy fission study 6=1552
- Y^{90}, carrier-free prep. 5=2111, 7349
- Zr^{95} det. in fission prod. mixture 6=5513

Radiography (See also Luminescent devices; X-ray tubes).

Resistance, electrical - contd
Zn—Sb system, new transition, temperature variation
Zr, 1-300°K 9=9667 [5=247
Resistance thermometers (See Thermometers, resistance).
Resistivity (See Conductivity, electrical).
Resolving power, optics (See also Optical instrument testing).
apertures, in Al layers 9=9522
circular, in white light 9=9379
astronomical instr., derived by Fourier anal. 5=9537
contrast transfer function improvement 9=6681
contrast transfer theory 9=6682
convolutions, analogue computer for calc. 9=8002
corrections to, analogue approach 9=3087
diffraction gratings, high resolution by double passing
in immersion 5=2639 [7=7790
large, meas. 5=8659
shrinkage effect 7=9646
rel. to tilted image 5=4564
effect of condenser aperture 7=4119
energy theory, emergence of concept., exper. verification
eye 6=8538 [9=7926
Fabry—Perot etalon, compound 5=5347
effect of natural line width 9=9517
rel. to stage of resolution 5=6053
Fabry—Perot interferometer with diel. mirrors 7=5242
glass-fibre transmission devices 5=3541
high-aperture systems 7=1166
high-resolution, i.r. spectroscopy 5=6908, 7819
i.r. spectrometer prism 6=198
image evaluation by geometric focal plots 6=8080
improvement by use of filter 8=560, 2220
increase in optical system by geom. aberration 5=2547
independent of wavelength? 7=1165, 8504
information theory appl. 5=6874, 6882; 6=1026-7, 4970
interference microscopes, obliquity effects 8=3015
interferometers, fringe separations, ordinary and artificial
doublets 9=10870
lens—photographic film system, rel. to bandwidth 9=3260
"objective—emulsion" combination 5=4496; 7=4118
relative aperture dependence 9=13135
limit estimation, Fresnel band method 6=1949
Lummer—Gehrche plate and transm. echelon 7=7788
0.2 mm thick 8=4899
microscopes, effect of semicoherent illum. 5=6069
lateral 9=5600
monochromators, effect of aberrations in optical system
multiple-beam interference fringes 5=9587 [9=9397
numerical evaluation of frequency response 8=1587
objective assessment of lens-test films 5=3370
optical instruments 7=1164
photographic emulsions 5=4264; 6=4137
contrast improvement 9=6680
rel. to developer 5=673
effect of i.r. treatment 7=8346
effect of internal scattering 9=6433
photographic lenses 5=235, 5968, 8675
effect of aberrations 6=5752
effects of atmospheric turbulence 7=9478
rel. to lateral chromatic aberration 8=3844
lens system, rel. to contrast 6=7924
lens system, rel. to definition and sharpness 5=3372
measurement 9=1245
transmission factor meas. 9=6679
prisms, dependence on various factors 9=2193
rel. to grating, refl. echelon and Fabry—Perot etalon
with rect. apertures 7=5953 [7=7722
resolution limit 9=11984
thallium bromoiodide 6=1024
Rayleigh diffusiometer diagrams, microcomparator
illumination system 9=3372
in relation to recognition 6=7257 [8=6791
response functions, asymptotic expansion of aberr. coeff.
slit-aperture systems, intensity matrix transform. 8=2938
spectral lines, limit rel. to resolution stage 5=9539
spectrometers, in absorption studies 9=9413
grating spectrometers, concave 5=830
grating spectrometers, intrinsic meas. 5=1739
rel. to scanning speed 8=4857
rel. to stage of resolution and detecting instrument 5=3542
test objects, annular 5=1737
charts, use of spot diagrams 5=6881
precision 5=1746
Resolving power, optics - contd
tests, sinusoidal gratings 6=8079
theoretical limit 7=8505
visible light, possible extension 6=4965
Resonance spectra (See Spectra, resonance).
Resonators
acoustic
absorpt. elements for broadcasting studios 5=3533
acoustic resist., calc. and meas. 5=4445
acoustic streaming at aperture 8=3828
aqueous solns. 9=2178
damping 9=10723
double, theory 6=3578
frequency change, with additional loads 9=11918
Helmholtz, damping by membranes 7=4079
impedance at v. high amplitude 7=9579
non-linear 8=3830
slit-type, as l.f. absorbers in studios 9=3240
hollow, coeff. dependence on arrangement 6=5746
with grating, coupled vibrations 6=5745
improvement of absorption panel efficiencies 5=814
piezoelec.-activated plates 5=2501
plate, for l.f. absorption 6=1938
producing reverb. time 6=1937
quartz, crystal resonators (handbook) 7=6962
synthetic elastic losses 9=871
ramjet combustion chamber 9=6648
rectangular pipe, with slot 7=4078
sphere-cone shell system 9=6620
water—air resonators 8=6779
wedge-shaped cavity resonators 6=157
electromagnetic (See Electromagnetic oscillations).
Reverberation (See also Architectural acoustics; Echo).
acoustic absorption meas. 7=4104; 8=3817
acoustic power meas. of jets 8=2918
acoustic ratio, direct meas. 9=5470
artificial, for broadcasting 5=3528, 8574
methods of prod. 5=156, 2543
"stereo reverberation" for concert hall 6=2762
bent reverb. curves study 6=7243
in concert halls 8=2931
continuous tone, underwater 5=9523-4
correl. coeffs. in reverb. field 6=1008
effects, in auditorium sound systems, review 5=154
electronic control 7=196
interference patterns in reverb. fields 5=4485
formula, and nonuniform absorption 9=9358
levels, in acoustic scattering by sea-surface 7=4082
low rooms and tunnels 5=7800
meas. of air nuclei in H_2O 8=2840
meas. equipment 7=3117
direct-indication apparatus 7=5149
meas. method for u.s. absorpt., liq. 6=7219
optimum, in auditoria 8=929 [5=146
reson.-reverb. tech. for sound absorpt., liq. and solids
reverberation chambers, random sound field 9=13129
in Rochester (New York) auditorium 7=4105
rooms, at Armour Research Foundation 8=1581
meas. with electronic counter 6=8639
statist. treatment 6=1936
Sabine equation, and sound power equation 9=9359
sound aplificiation in reverant spaces 8=7786
sound-source output in reverberation chamber 8=3824
time, adjustments, Budapest State Theatre 5=3531
and decay charac., pulse measuring techniques 6=5749
rel. to freq. response 5=1649-50
optimal, for concert halls, test 5=1651
optimal, for studios 5=9522
rooms, vibratory absorbers effect 6=1937
Rhenium
electron emission, under ion bombard., structure study
electronic specific heat 7=7832 [9=4682
field emission rel. to crystal struct. 5=4720
low-temp. magneto-resistance 6=7394
low-temp. resistivity 7=7857
minerals, dating by neutron activation 6=1760
specific heat, nuclear contribution 9=12190
spectral emissivity 6=5750
superconductivity 7=6194
critical field, at 0.3°K 9=3506
Rhenium compounds (See also Alloys).
fluorides, magnetic properties 9=11196

Rhenium compounds - contd

Delbrück theory, causality relations 7=5064

Scattering, particles - contd
derivation of low scatt. formalism 6=4832 [6=4201
differential, inelastic, of relativistic charged particles
diffraction disintegration, energy and ang. distribution
9=13722
diffraction phenomena, in fast-particle collisions with
nuclei 9=12534
Dirac eqn. central potential, construction from scattering
data 9=4280
Dirac particles, with damping 7=1064
diffraction in time 5=2430-2
elastic scattering and polarization 8=5174
electrons, by screened Coulomb field, polarization 9=47
polarization on scattering 8=1529
polarized, phase theory of short-range forces 9=10619
simplified theory 8=3705
by short-range force centre 8=7230
direct interaction theory, inelastic scattering 8=1946,
dispersion relations, for any angle 7=3974 [3365
and causality 7=9005
charge-dependent corrections 7=8407
for form factors 9=55
nonrelativistic, rel. to scatt. amplitude 7=9545
for potential scattering 9=2078
potential scattering, nonrelativistic 9=4285
for potential scattering, uniqueness of solutions 7=8416
spin—flip 7=2699
in dispersive media, ang. distrib. 8=8196 [8=4211-12
double-scattering, polarization—asymmetry equality
test for invariance under time reversal 8=6644
eigenvalue in complex plane of energy 8=7697
elastic, charged particles by nuclei 5=7698
charged particles, by nuclei, intermediate energy
from complex target 9=13020 [9=11462
multiple, diffuse reflection and transmission 9=9923
near nuclear reaction threshold 8=5175
by potl. well, with spin—orbit coupling, polarization
small-angle, optical theorem 7=5873 [6=2384
energy shifts in Feynman formalism 8=2144
excitation of rotational motion, semiclassical limit 8=4745
explicit potentials for scattering functions 8=886
in external fields, integral eqn. theory 6=8002
fast particles, beam polarization, emulsion detect. 5=8846
charged, theory 5=5895
fermion—fermion, eqn. for vertex part 9=1081
interacting 7=5049
relativistic eqn. 7=8412
in triplet state 9=9235
field theory 9=13017
by force centre, fixed 7=3976
radiation damping theory 7=7607
form of scattering amplitude for two systems of arbitrary
spins 8=2151
formalism, for level-shift calculations 8=1518
limiting processes 5=742
in non-local relativistic field theories 8=7688
perturbation expansions 8=2792
gas scattering, in proton synchrotrons 8=5972
general diffusion eqn. for single particle 6=4852
general field theory formulation 7=2990
high-energy, approximation method 7=1914
conf. report 5=9065
covariant formulation 8=1515
Diract and Klein—Gordon, relationship 7=1909
elastic 8=677, 5173
elastic, polarization 8=8195
limit of potential scattering 7=9008; 8=5645
potential scattering 8=54, 512
potential scattering, asymptotic expansion 8=1521
potential scattering, formulation 7=8417
high-energy nucleons, by Be, C, O, Al, S, total cross-
sections 5=4930
by nuclear field, polarization 5=66
nuclear potl. well 5=5581
high-velocity neutral particles 7=758-760
identical scattering from causal and noncausal inter-
actions 8=2796 [8=1158
imaginary part of amplitude for Delbruck scattering
incoherent, due to collisions, Zanstra's ratio 5=4374
form factor for light nuclei 5=7397
inelastic, cross-section dependence on energy 7=9543
direct-interaction theory 9=10092

  phonon—electron scatt. contrib. 5=3729

Semiconductors - contd
thermoelectric properties, thermodynamic theory 9=2362
  theory 5=290, 971
  transport effects 7=2196
  two-band, semiconductors, theory, for temp. dependent gap energy 9=11062
  utilization of high thermoelec. power 9=6929
thermoelectric and thermomagnetic effects 9=13275
thrmomagnetic effects 7=3269, 5319, 9189
transition to metallic conduction 7=7881, 9174; 8=3992
transport phenomena 7=7047, 7096; 9=6913-14
  coeffs. for polar semiconductors 9=5681
  in elec. and mag. fields, Hall current 9=4305
  general transport theory 6=2090, 2867, 5859
  rel. to grain-boundary struct. 6=1217
  heavy and light holes 6=2865-6
  variational method 9=1428, 2111
transverse magnetothermoelec. effect, theory 6=8768
transverse photomagnetic effect 8=7929
trap-free, 2-carrier space-charge limited current 9=13279
u.s. absorption by free carriers 7=9578
well-conducting 6=2080-1
Series (See also Fourier series).
binomial, use in aberrations approx. repres. 6=4972
coeffs. for decomposition into Laguerre-function series 7=6804; 8=1408
expansion of potential funcn. of attraction of ellipsoids 9=11869
expansion of Thomas—Fermi function 8=7423
F-functions of shielding computations, for nuclear reactors 7=3692
Gram—Charlier, use to represent noise 6=6289
infinite, relation with Laplace transforms 8=4618
Legendre polynomial, ang. distrib. data 8=8566
Madelung, rate of convergence 6=788
representation of long-range forces between atoms 6=2336
slowly converging, summation 5=1441
stationary, time, correl. functions det. 5=2360
in theory of stigmatic lenses, summation 8=5749
Sferics (See Atmospherics).
Shock waves (See also Detonation; Explosions; Supersonic flow).
ablation studies in shock tubes 9=7886
acceleration of dust particles 8=548
acoustic cylindrical waves 8=1563
  interaction with stationary shock wave 8=2904
adiabatic gas motion behind wave, in varying density atmos. 9=11929
analysis 9=13119
angles at the triple point 9=6636
appl. to arc. temp. meas. 6=5122
asymptotic spherical shock decay 5=5953
attenuation, expt. and theory 5=1618
  attenuation due to obstacles 9=7887
  attenuation in shock tube, laminar flow 6=2746
in binary mixtures, struct. 5=3511
blast-wave problems 6=996-7
boundary layer action on body, at M≤ 5 9=1165
bow stand-off distance, mag. field effects 8=6748
breakup of water drops 8=5694
calorimeter heat transfer gauge, for shock tubes 9=244
collapse of spherical cavity in water 6=4860
colliding galaxies 9=986
collision of spherical shock waves 9=13098
compression, in metals 8=6744; 9=8791
  meas. of compressibility of solids 8=7478, 7573
  in solids, radiographic study 8=6467
in conducting fluid, in mag. field 9=9859
in conducting gas, in e.m. field, conductivity increase 9=9861
  flowing in e.m. field, p—ν relations 9=13502
  ideal gas, with isentropic law 9=13503
  moving in mag. field 9=1609
  ultrarelativistic gas 9=11937
curved, attached, at open-nosed body 5=2489
  at infinite wedge in supersonic flow 5=2488
  supersonic flow 7=5927
  in 3-dimen. gas flows, theoretical relations 9=4386
cylindrical, blast waves 9=9326
  thickness, limitations of PLK method 9=6639
  visualization 9=9327
damage 9=6576
in dense medium, expt. techniques 5=7772
  theory 5=5915
density profiles det. by electron beam 5=6828

Shock waves - contd
detached, in front of cylinder 5=4431
  location in nearly sonic flow 6=131
detonation, large single crystals 8=547

- dicarboxylic acid—water, dynamic surface tension
  - meas. 9=2132 [6=7313
- o-dichlorobenzene in methylcyclohexane, association
- dioxane in aq. solns. of MnSO$_4$ and CuSO$_4$ 9=11905 [9=4334
- ethyl cellulose, in six solvents, viscosity, rel. to temp.

Solutions - contd
  Fe_2O_3 in HCl, proton irrad. effect on rate 6=765
  glycerin, in water, proton spin relaxation of Cr III ions
    6=5236, 7197
  H_2, ortho–para, nonideality 8=906 [7=3082
  HCl, in water, acoustic wave velocity and compressibility
  HNO_3–H_2O, acoustic wave velocity and compressibility
    7=3082
    and HNO_3–N_2O_4 systems, thermodynam. props. 9=1392
  H_2O, association of molecules 7=4020
    in pyridine, proton mag. resonance 8=9093
  H_2O–HF–HNO_3, as Ge etchant 8=7602
  H_2SO_4, in water, acoustic wave velocity and compressibility
    u.s. velocity and compressibility 9=13091-2 [7=3082
  He^3 in He II, diffusion and thermal cond. 8=2279
  He^3–He^4 6=8740
    phase separation 6=8737
    Pomeranchuk effect 9=2280
    specific heat 6=291
    theory 9=12183
    thermodynamic props. 5=2681
    vapour pressure 6=8741
    vapour pressure meas. 5=895
  n-hexanol in n-hexane, dielectric behaviour 9=12215
  hydrazine–water, sound velocity det. 6=993
  hydrocarbons, in H_2SO_4, electron spin reson. 7=6662
    in water, partial molal volumes 5=787
  I_2, in CCl_4 and CS_2, partial vapour press. and entropy
    complexes in C_6D_6, i.r spectrum 7=7007 [9=10918
    complexes, in inert solvents 7=6674-6; 8=6490
    I^-, in electron-acceptor solvents 7=7000
  ice–NH_4F, dielec. relaxation 7=2184
  In–Pb, atom movements 9=3199
  iso-octane–perfluoroheptane, thermodynamic and transport
    props. 7=4022
  K acetate, absorpt., ultrasonic studies 5=1622
  KBr in alcohols, u.s. velocity and compressibility 9=4377
  KCl, in alcohols, u.s. velocity and compressibility 9=4377
    iobic conduction at microwave freq. 5=3219; 8=2050
    Soret effect meas. 6=2716
  KI, effect of ultrasonics 5=6844
  KOH, compressibility 7=5906
  Li in NH_3, paramagnetic resonance 9=107
  $LiClO_4$ in acetonitrile, electrolytic dissociation 9=8958
  metal–ammonia, electron cavity model 7=9566
    electronic processes 8=6707
    model 7=1959
    thermoelec. power 6=7435-6
  methanol–CCl_4, thermal diffusion 9=9303
  $MgSO_4$, acoustic props. 8=3805
    u.s. absorption, at high press. 8=8649
    u.s. velocity, different conc. and temp. 6=6445
  milk, absorption and scattering of light 8=589
  Mn, Overhauser effect 8=8613
    Mn^{++}, proton relaxation times 7=2499
  $MnSO_4$, u.s. absorpt., factors affecting 6=4916
    u.s. absorption, 1-6 Mc/s 9=149
  NH_3, aq., u.s. relaxation 5=6834
    electron cavity model 8=6706
  NH_4Cl in alcohols, u.s. velocity and compressibility 9=4377
  N_2O_4, aq., u.s. relaxation 6=4266
  $NO(SO_3)_2K_2$, nuclear mag. resonance 8=5288
  Na acetate, absorpt., ultrasonic studies 5=1622
  Na–Cd system, thermodynamic props. 7=4021
  Na–NH_3, electron spin relaxation 8=2857
    electronic structure from nuclear mag. resonance
    Knight shift and wave-functions 9=5413 [7=8064
  NaCl in alcohols, u.s. velocity and compressibility 9=4377
    caustic-curve formation by acoust. wave 8=6772
    in NH_3, electron resonance and conduction 8=2051
    rate of solution, as crystal size det. method 5=3473
    spark discharges in 8=8793
    viscosity rel. to conc., 30-55°C 9=3185
  NaOH, compressibility 7=5906
    in water, as GaAs etchant 8=8521
  Na_2SO_4, metre-wave refract. index 5=4625
  nitrobenzene–CS_2, dielec. relaxation time, rel. to
    viscosity 9=13245
  O, quenching effect on fluorescence, organic 9=1308
  O–H stretching freq., pressure effect 7=3489
  OH–H recombination, aqueous, γ-irradiated 9=8967
  Pb acetate, in water, u.s. vel. 9=136

Solutions - contd
  Pb salts in H_2O, u.s. velocity 9=140
  Pb–Hg, viscosity and structure 8=6688
  $Pb(NO_3)_2$, in liq. KNO_3, thermodyn. study 7=6937
    transference numbers 8=8502 [9=4389
  perbutane–toluene, u.s. absorption, structure changes
  Perspex soln., absorpt., ultrasonic studies 5=3517
  phenol, in CCl_4, C_6H_{12}, C_6H_5Cl, u.s. absorpt. 6=2751
    in pyridine, proton mag. resonance 8=9093
  polyacrylic acid, aq., ultrasonic dispersion 8=7768
  polyethylene, wettability in various aqueous solns. 9=11892
  polyisobutylene–benzene, u.s. absorption, structure
    changes 9=4389
  polymolybdates depolarization of scattered light 5=6056
  polypeptide, dielec. props. 9=1411
    dipole moment of α-helix 9=10198
    liquid crystal structure 7=1114
    one-dimensional phae transition 8=8618-19
  polystyrene, in benzene, acoustic birefringence 7=6079
    optical and flow props. rel. to solvent viscosity 6=2022
    self-diffusion 8=6705
  polyvinyl acetate in toluene, dielec. dispersion 6=7386
  polyvinyl alcohol, aqueous, γ-irrad., gel. formation
    transition phenomena 9=8769 [9=10351
    viscoelastic properties 9=4347
  proteins, theory 5=5260; 6=1891
  pyrogallol, oxidized, paramag. resonance 6=1386
  rare-earth cpds., for 4π-counting 8=257
  RbCl, ionic cond., at microwave freq. 8=2050
  rubber, absorpt., ultrasonic studies 5=3517
  SO_2, aq., u.s. relaxation 5=6834
    in polarsolvents, effect on spectra 7=6997-9
  silico-tungstic acid, structure 9=8757
  Sn–Hg, viscosity and structure 8=6688
  SrI_2, in water, u.s. velocity 9=136
  sugar, molecular sound velocity 7=7682
    ultrasonic absorption 5=5956; 8=5729-30
  Th salts, in H_2O, u.s. velocity 9=140
  Teflon, wettability, in various aqueous solns. 9=11892
  Tl salts, in H_2O, u.s. velocity 9=140
  triethylamine–water, coexistence curve 7=7825
  U salts, in H_2O, u.s. velocity 9=140
  uranyl chloride in water, u.s. vel. 9=136
  uranyl nitrate, in water, u.s. vel. 9=136
  Zn halides, structure 6=121
    vel. study, ultrasonic studies 5=4451
  Zn–Hg, viscosity and structure 8=6688
  $ZnSO_4$, u.s. vel., different conc. and temp. 6=445
Sorption (See also Adsorption).
  chemisorption, data and Elovich eq. 6=9018
    halogens, exchange with methyl halide 6=1672
    log rate law 5=6585
    on metals, effect on work function 5=4152
    on solid oxides and hydroxides, occurrence 5=9220
    structure-sensitive 7=4841 [9=5795
  desorption, and dehydration process by spark counter
    diatomic molecules 6=7797
    field theory 9=11132 [6=2530
  foreign substances absorbed on crystals, effect on growth
  gases, absorbed on metal films, effect on elec. resist.
    7=4320, 7923
    absorption, on porous crystals, eqns. of state 9=10940
    on capillary surfaces 5=4154
    desorption in ionization gauge 5=5266
    diffusing through porous medium, isotope separation
    by hot metals, meas. 7=4831 [8=361
    rates, and Elovich eq. 7=5707
    on semiconductor surfaces 7=7862-3, 7092, 7869, 7877
  ions, desorption from metal surfaces 8=5084
  labile species, heterogeneous reaction 8=9173
  MO theory of interaction of atom and crystal surface
  moisture on aerosol particlez 9=11613 [9=10263
  semiconductors, oxide, of gases and vapours, surface
    charging 9=13292
  sorption balance, automatic high-pressure, control
    device 9=5232
    electromagnetic 5=7480
    micro, for v. low temp. 5=5696
  thermal transpiration calc. 5=4435
  vapours, on porous solids, dielec. const. 9=6885
  acetylene, chemisorbed, i.r. spectrum 6=3625
  Ag film, effect of gases, elec. resistance 7=4320 [9=7472
  amines, straight-chain, and alcohols, sorption complexes

Sorption - contd
C, sorption and surface diffusion of gases 5=8368
CO, by Ba alloy getters 7=3057
desorption, i.r. spectral study 5=608
low temp. chemisorption 8=6488
CU$_2$O, effect of O$_2$ on elec. and optical props. 8=2245
H, chemisorbed, entropy 7=8249
H$_2$, on Ni films, effect on elec. resist. 9=10961
H$_2$, surface diffusion on Ni 7=7480
He, thermal accomod. on bare W 5=6584
Hf, gas adsorption, on, rel. to thermionic props. 7=5438
N$_2$, on Ba evap. films 7=9954; 8=3983
low temps., chemisorption 8=6488
on Ti, chemisorption 9=8977
on W, chemisorption 9=4095
O$_2$, by Ba alloy getters 7=3057
on CdSe crystals 8=1686
on Ni, oxide formation chemisorption, effect of lattice defects 9=8978
on PbS, chemisorption, a.c. conductivity meas. 6=7795
on ZnO, chemisorption 9=11096
olefines, chemisorbed, i.r. spectrum 6=3625
PbS films, effect of O sorption 6=348
rare gases on graphite, calc. 7=8248
Rb on etched W, lifetime 9=6279-9
Si, work function and sorption properties 9=3546
silica gel, dielec. absorption of gases 7=1255
TiO$_2$, dielec. absorption of gases 7=1255
water, on silica gel, dielectric absorption 9=4547
sorbed, proton magnetic resonance 8=7587
vapour, on Cr films, effect on elec. conduct. 6=2077
wool—water systems 7=2163
ZnO, photodesorption 8=9172
Sound (See Acoustics).
Sound ranging
active sonar detection 9=7914
correlation of a finite distance point source 9=6668
effect of rain on underwater noise levels 5=4487
fluctuations in vertical transmission in sea 9=1227
over-great distances, interference effect 5=1652
hydrophone minor lobes by volume scattering 9=13116
pressure gradient receivers in correlator receiving system 9=13130
pressure phone for hydrophone calibration 9=13118
time-averaged product array and intraclass correlator 9=13117
underwater, continuous tone reverberation 5=9523-4
echo-ranging, review 6=7245
signal/reverberation ratio 8=551
transducer design 5=6838
Sound recording
disk, calibration by interference patterns 6=3589
magnetic, acoustic time regulator 6=8640
tapes, data on γ-Fe$_2$O$_3$ powder remanence 5=8896
tapes, residual induction loss rel. to mag. field distrib. in gap 6=4963
tapes, speed fluctuation meas. 8=930
tapes, speed regulation 7=8497
pitch and amplitude fluct. discrimination 5=8575
"publication" of acoustical research 9=9364
record noise level and mech. stresses 5=155
stereophonic sound film, survey 5=3534
synchonization, on dual tapes 6=170
of music 9=9363
temporal lengthening without freq. change 6=7244
test record interferometric calibration 5=6864

NaCl, adiabatic colorimeter, meas. below 20°K 5=4609
  lattice model calc. 8=7482
  low temp. 5=7923
$NaNO_3$, 60° - 340°C 8=3956
naphtha 9=8059
Ni, below 4.2°K 7=2143
  from magnetisation and atomic vibrations 9=3406
Ni nitrate hexahydrate, transitions det. 5=9610
NiZn ferrites 7=7218
Np metal 7=8207
O_2 gas, spec. heats and their ratio 8=3808
O_3, liquid, 97-121°K 9=270
oxygen, solid, at 4-20°K 7=335
n-paraffins, empirical calc. 6=8745
Pb, 0°-900°C 5=1783
  superconducting isotopes 9=4620

Specific heat - contd
Pd, atomic heat 8=3053
  2-4°K 7=6136
Pd—Ag alloys, 2-4°K 7=6136
Pd—H, atomic heat 8=3053
Pd—Rh alloys, electronic part 7=9664
polystyrene, at low temps. 9=2891
Pr ethylsulphate 9=8281
$PrCl_3$ in H_2O 9=12192
Pt, atom and electron heats at low temps. 9=3390
pyrophyllite 5=8685
quartz, at α—β phase transition 7=9657
  and vitreous silica, from spectral data 7=5286
rare earth metals 9=3631
Rb, 1.2-4.2°K 9=10933
  below 330°K 6=2841
Rb nitrate 9=4531
Re, electronic heat 7=7832
  nuclear contribution 9=12190
Rh, atomic and electron heat, 10 to 273°K 5=9617
SO_2, gas, rel. to u.s. dispersion 8=89
  liquid, u.s. study 8=92
Se, effect of I impurity 8=147
Si, 1.2-4.2°K 9=4583
  neutron-irradiated 9=2942
silica, vitreous and crystall., low-temp. 5=5381
Sm, atomic heat, 2-20°K 7=6132
Sn, normal and superconducting, atomic heats 6=4373
  0.15° - 4°K 8=3923
  below 1°K 7=9141
  1.5 - 4.2°K, vac. calorimeter 5=3697
Sr, atomic heat 7=8575
Ta, atomic and electronic, 10°-273°K 6=2840
Tb, 0.2-6°K 8=6929
Th, atomic and electronic 7=9665
  electronic heat at low temp. 8=3947
Ti, atomic heat 8=1027
  electronic sp. ht. coeff. 6=5823
$TiCl_4$, $TiCl_3$, $TiCl_2$ 6=8746
titanates containing Sn^{4+} ions 5=2709
Tl, normal and supercond., atomic heats 7=4290
transition metals, electronic heat 7=7831
triethylamine, liquid 7=1144
tri-glycine sulphate and tri-glycine fluoberyllate 8=5861
U, at 100 to 800°C 7=334
UI_3, at liq. He temp. 6=478
V, normal and superconducting, atomic heats 6=4372
  below 1°K 7=9141
Va, electronic spt. ht. rel. to temp. 5=3791
water, ord. and heavy 7=9593
wood, rel. to heat of wetting 8=598
YFe garnet, effective exchange constant 9=10935
Yb ethyl sulphate, low temp. 7=8559
Zn, atomic heat 9=8058
  Debye charac. temp. 9=1903
  low temp. 5=7922
  in normal and supercond. states 9=1360, 5634
  nuclear contribution 9=12191
ZnS, low temp. 5=7923
Zr, atomic heat 8=1027
Spectra (See also Absorption; Astronomical spectra; Atmospheric spectra; Colour; Mass spectra; Raman spectra; Spectrochemical analysis; Spectroscopy; Stark effect; X-ray spectra; Zeeman effect).
absolute intensities det. for spectral lines 6=1971 [6=9016
absorption, of free radicals, prod. by flash discharges
absorption bands, in liquid and gas phases, relative intensities, theory 9=7948
absorption lines, intensity and width, theory 5=6909
acoustic, of transient funcn. 9=6652
arc, pressure effect 9=12327
  self-absorption 7=5159
atomic clocks based on NH_3 line 5=21-2
atomic systems, induced and spontaneous emission in e.m. field 9=13508
  interaction with coherent e.m. field 9=474
binary mixtures, "simultaneous" i.r. absorption lines
bremsstrahlung from Maxwellian gas 9=13536 [9=10800
charge transfer, effect of pressure 9=6721
chromophoric groups, empirical regularities 8=961
close lines, apparent separation and intensity ratio 9=7934
comparator for wavelength and intensity meas. 9=6809

Spectra - contd
- complex, theory 7=9058
- complex molecules, rel. to luminescence spectra 9=9485
  - shape of absorption and emission bands, calc. 9=12025
- complex ions, absorption 9=10789
  - in solid solution 9=6730
- dense plasmas, line density distrib. 8=6823-4
- diatomic bands, harmonic oscillator case 7=6992
- displacement, due to atm. press. var. 8=5761
- echelle, wavelength meas. 9=6699
- electronic, in condensed systems, theory 5=8108
- electronic shifts of nonpolar molecules in nonpolar solvents 8=2007
- emission, configurational curve model calc. 8=2942
  - excited by electron and ion impact 7=220
  - by hot gases, continuous background 8=5760
- energy spectra in isotropic turbulence 9=7831
- excitation, by active N in streamer and brush flames 5=9549-50
  - by atom—electron collisions, review 7=9061
  - by shock waves 7=5158
- exciton-produced, in solids 7=4881-3; 9=2920
- forbidden transitions, effect of electron conc. 7=3133
- free—free emission, r.f. continuous absorption coeff. 9=9410
- gases, i.r. absorptivities and emissivities 9=13166-7
- from "gliding sparks" 9=12326
- the H bond, survey 6=2295
- high- and low- multiplcity term sep., l^N config. 5=2577
- high press. perturbations, statistical mech. calc. 9=10209
- i.r. beyond 20μ, various substs. 7=7004-5
- i.r., spectral activity and molecular symmetry 8=792
- i.r., vibration spectra, of substances in soln, theory 8=7811
- i.r. absorption, rel. to atomic polarization 8=3433
  - band intensities, liq. and gas 6=1049 , 8674
  - intensities, liq. and gas 8=8683
  - kinetic view of temp. dependence 6=8094
  - effect of electron and nuclear motion 7=7252 [6=8083
- influence of external medium on arc spectrum intensity
- intensity, distrib. along contour of self-reversible line
  - distrib. in intercombination band 9=1275 [9=12020
  - i.r., meas. 9=4422
  - of lines in discharge, controlling parameters 8=4851
  - of rotation lines in absorption bands 7=7734
  - and slit illumination 9=3268
  - of weak lines, formulae for evaluating 9=1006
- interatomic distances from rotational spectra 8=4396
- intermolecular interaction effects 9=13758
- isotropic shifts, in studies of nuclei 8=9016
  - theory 9=575
- line, rel. to ion motions in discharges 7=9706
- line shapes, dependence on various parameters 9=7220
- long sparks, time-resolved spectra 5=7072
- molecular, band systems, Franck—Condon factors 7=575
  - band systems, Franck—Condon factors and transition moments 9=732
  - complex, absorption, emission and luminescence 7=9597
  - complex, absorption, rel. to luminesc. spectra 7=8517
  - coupling between absorption groups 7=7253
  - frequency in h.f. field 7=235
  - Rydberg series, theory 9=190
  - structure data (book) 5=5682
- molecular crystals, l.f. librations and vibrational spectra
- molecules with H bonds, infrared 8=119 [9=6233
- multiplet strengths, theoretical 9=10748-9
- nuclear isomeric shift calc. 7=3132
- oscillator strengths meas., from spectral line width 8=574
- $^7\Pi \leftrightarrow {}^{17}\Sigma$ bands, intensity formulae 9=6717
- point discharge, in moving conducting medium 9=13338
- polyatomic molecules, i.r. rel. to quantum theory of
  - rotation 8=6656
  - notation 6=1029
- pressure modulation of i.r. absorption 9=2213
- pressure shift, photoelec. meas. 7=7731
- quantum mechanical systems, calc. 9=11805
- r.f., of molecule assemblies 8=116
- Rayleigh—scattering line, fine structure 6=8711
- reflection, of coloured light-scattering objects 5=6025-6
- relativistic doublets, Dirac's theory 8=2146
- remote thermal and atmospheric structure 9=12896
- rotational, i.r., of symmetrical molecules and crystals
- sliding sparks in vacuum 7=6984 [8=957
- solids, spectral emissivity, in i.r. 9=9367

Spectra - contd
- solutions, absorption and luminesc. 7=9075
- solvent effect on spectra of an impurity 8=6812
- spectral band absorption, models 9=189
- Stark-splitting of levels by crystalline fields 7=4136
- strengths of lines, review of calcs. 7=1179
  - widths and shapes of i.r. lines 6=7288-9
- symmetrical-top molecules, rotational spectra, theory of h.f. structure 9=12026
- total absorpt. and overlapping, lines of equal strength
- transitory complex, shift of bands 9=188 [6=7284
- vibration-rotation bands, i.r. intensities 9=4451
  - intensity, expt. det. 9=5522
- vibronically induced absorption of forbidden i.r. transitions 9=6188
- wavelength data, for length interferometry 8=7845

continuous
- absorption, time-varying sparks 6=1259
- arc cathode spot in mag. field 5=7079
- gas discharge, polarization 7=238
- high-pressure gas flames 6=6508
- intensity distrib., apparent effect of resolution 8=4681
- perturbation theory 6=2689, 4847
- u.v. from synchrotron 6=5939
- air, high-temp. i.r. 8=6819
- Ar, produced by shock waves 5=2569
- benzene in shock tube 7=9609
- Br, excited by shock waves 6=1046
- C, u.v. continuum, rel. to N-type star spectra 6=1953
- Cd, arc spectra, p^2-config. levels 6=1963
- F_2, dissociation energy det. 7=8077
- Fe—B and Fe—Si, enhancement effects in Tesla discharge
- H, arc study, h.p. 5=1878 [5=7820
  - 4000-6000 Å 5=1676
  - electron recombination 9=6162
  - H^-, in a shock-wave tube 9=7890
- He, neg. glow, electron groups 5=6182
  - in vacuum u.v. 8=2952
- Hg, afterglow, diffusion of metastable Hg molecules 6=2910
  - arc spectra, p^2-config. levels 6=1963
  - discharge h.p., longest wavelength i.r. 5=169
  - h.p. arc, electron—atom collision continuum 9=12019
  - v.h.p. arc. 5=6186
- Kr, vac. u.v. light source 6=196
- LiCl, LiBr, LiI, u.v. absorption 7=5989
- N_2O, extreme u.v. absorpt. 6=1973
- Ne, in vacuum u.v. 7=4128; 8=2952; 9=7942
- O, liquid, Rayleigh line, intensity distrib. in wing 5=873
- oxyacetylene flames, violet continuum 5=7821
- rare gases, elec. induction discharge emission 5=1665
  - in vac. u.v. 5=8596
- Si, from avalanche breakdown 6=4404
- Xe, shock-tube production 9=1269
  - wall-stabilized h.p. discharge 6=4426
- Zn, arc spectra, p^2-config. levels 6=1963

flames
- absorption, determination of isotropic composition 9=7402
  - method of temp. meas. 6=2834
  - various organic substances 8=963
- "atomic flame" of heavy hydrazoic acid and atomic H
- book 7=7718 [8=4921
- cool flames and pre-ignition flows 6=2773
- double-beam method of spectral selection 5=7484
- effect of sample flow in spectrochem. analysis 9=914
- electronic temp. and energy distrib. meas. 8=3038
- explosive powders, combustion invest. 5=6082
- gaseous flames at high pressure 6=6508
- metal compounds, infrared 8=113
- method of studying effect of gaseous additive 7=222
- optical cross-section det., 14 elements 7=3125-6
- product emitter flame anal. 6=9005
- shock-waves, and detonation spectra 7=5971
  - flames and detonations comparison 5=3551
- zone spectroscopy, solid propellants, JPN 6=6502
- acetaldehyde, 2-stage cool flame 7=9603
- acetylene, press.-broadening of yellow Na lines 5=176
- alkaline earth metals, carriers 5=10053
- B, burning, blue emission 6=8089
- Ba 5=4500
  - bands 6=8090
  - red and i.r. bands 6=4992
- Be bronze spark, periodic processes 5=2557

- Spectra - contd
  - flames - contd
    - C_2* radical in hydrocarbon flames 6=1031
    - C_3, 4050A band 7=2007
    - CH emission, analysis of interference fringes 8=5806
    - C_2N_2—O flame as source in spectrochem. 5=8586
    - CO diffusion flames, preheating effect 5=9552
    - CO_2 i.r. emission-band shift 9=10765
    - CO—O_2, i.r. emission-band shift 9=10765
    - Ca in acetylene 7=5164
    - CaO 9=10760
      - green and organge bands 5=8601
    - CaOH, CaOD, green and orange bands 5=8601
    - ClF_3 diffusion flames 5=9611
    - Cr 5=4500
    - diethyl ether, i.r., 2-stage cool flame 5=9553
    - HCO free radical band system 6=2782
    - H_2—O_2, C_2H_2—O_2 mixt., far i.r. emission, temp. det. 6=3601
    - Li lines, in $O_2 + H_2 + N_2$ flames 8=3853
    - methane, 3.3μ 8=3855
    - N, active, excitation by, streamer and brush 5=9549-50
    - NH_3—O_2, diffusion flame, i.r. 5=4519
    - Na, lines in $O_2 + H_2 + N_2$ flames 8=3853
      - reson. fluorescence yield 6=5764
    - O_3 decomposition flame 5=2574
    - OH bands, lifetime of $^2\Sigma^+$ 6=1102
      - nonthermal rotational distrib. 7=223
      - in $O_2 + H_2 + N_2$ flames 8=3853
      - self-absorption and line shape 5=2573
      - rotational temps., abnormal, l. p. 5=5301
    - oxyacetylene, C_3 in flame 8=4866
      - electronic quenching of OH excited states 9=7944
      - energy distrib. 7=5275
      - flash initiated 6=2831
      - λ 4050 Å bands and assoc. violet continuum 5=7821
      - luminous mantle 8=4922-3
      - OH i.r. emission 8=7808
      - shape of CH emission line 9=185
    - pentaborane—air 7=1230
    - propane—air, effect of irrad. 8=1021
    - Sr, in acetylene 7=5164
      - bands 6=8090
    - V 5=4500
  - resonance (See also Luminescence).
    - broadening of terms, exptl. meas. 5=168

    - AgCl-doped, structure of absorpt. spectra 9=3288
    - colour centre absorption 7=5994
    - Cu- and Ni-doped, absorption 9=8872
    - Cu- and Ni-doped, F- and V-bands 9=12791
    - electron bombard., colour-centre absorption 9=12805
    - exciton absorption peak 7=3138
    - with hydroxyl ion impurities absorption bands 9=6722
    - sensitized crystals 5=9240
    - V-centre bands 8=3128
  - NaCl—CuCl crystals, absorption 8=578
  - $NaNO_3$ and $NaN^{15}O_3$, u.v. absorption 9=9418
  - Nd salts, absorption and Zeeman effects 6=8665
  - $NdCl_3$ 8=7839
  - Ni^{2+} in crystalline field 8=3398
  - $Ni^{2+}.6H_2O$ at low temp. 7=9611
  - NiO, absorption 0.1-6 eV 9=12032
  - nitrate crystals, anal., single-cell model 7=8522
  - olivine, absorption edge, rel. to press., up to 150 000 atm. 9=12051
    - high-press. displacement of u.v. absorpt. edge 6=6521
  - P, pressure effects on adsorption edge 9=10784
  - PD_4I and PH_4I 8=386
  - PbI_2, absorption 7=9078; 9=4443
    - emission at low temp. 7=5222
  - $Pb(NO_3)_2$, i.r. transmission 8=3448
  - PbS, PSe, P bte and alloys 9-9628
  - Pr ion in single crystals of chloride 8=7817
  - $PrCl_3$ 8=576
    - single crystals 6=1062-3
  - Pu salts, absorption 8=962
  - pyroxenes, vibration spectra, calc. 9=12046
  - quartz, α-type, effects of radiation on i.r. absorpt. 7=8521
    - clear and neutron irradiated 9=9435
    - fused emission, due to X-rays 5=6884
    - fused, X- and γ-irrad., absorpt. 5=6947

Spectra - contd
- inorganic solids - contd
  - quartz, neutron bombarded 5=6611
    - vibration spectra, calc. 9=12046
  - rare earth nitrates, crystal ion theory 6=3025
  - Rochelle salt 7=9617
  - ruby 7=9075, 9610
    - absorption fine structure at 560 mμ 6=8100
    - absorption at low temp. 9=12044
  - S, solid solutions in fused salts 8=9135
  - Sb_2S_3, absorpt. const., 400-1000mμ 8=6794
  - Se, pressure effects on absorption edge 9=209, 10784
  - Si, absorption edge, fine structure 9=3280
    - absorption, exciton and phonon effects 9=10243
    - broadening of impurity levels 6=1055
    - bound hole line spectra, conc. effects 6=6527
    - fundamental absorption edge 9=5699
    - heat-treatment centre 9=4032
    - lattice absorption bands 9=2211
    - line broadening of impurity spectrum 6=8202
    - p—n junction, visible light from 6=360
    - single crystals, absorpt. 5=8616
    - temperature dependence 6=7564
  - SiC, α-type, absorption near band-edge 7=4890
    - pure and doped 9=10778
  - SiO_4 and silicates, vibration spectra, calc. 9=12046
  - silica, impurity absorption band 7=4895
    - vitreous, absorpt. at 2420A, GeO_2 impurity effect 6=5773
    - vitreous, 2400Å absorpt. band, new effect 5=6915
    - vitreous, u.v. absorpt., new effect 5=6914
    - vitreous, u.v. absorpt. study 6=4680-1, 6207
  - Sm^{3+} in crystals of different symmetry 8=7816
  - SnS, absorption 9=13323
  - SrF_2:U, absorption 8=133
  - ThI_4, as secondary standard 9=5509
  - Tl^+—alkali halides, absorption, rel. to press. up to 130 000 atm. 9=7959
  - TlBr absorption 9=4443
  - TlCl, absorption 9=4443
    - phosphors 7=6016
  - TlI, absorption 9=4443
  - transition-metal complexes 5=5996
    - effect of high press. 9=4442
  - transition metals, hydrated ions 7=7741
  - U glasses, u.v. 6=220
  - UF_6, absorption spectra 7=4146
  - UO_2, evap. films, u.v. and visible absorption 9=13161
  - wurtzite, band—band transitions, selection rules 9=12031
  - $YbCl_3.6H_2O$ 7=243
  - ZnO, vibrational structure 5=6006
  - ZnS, absorption 7=9078
    - absorption, visible light 9=9428
    - Cu—doped, phosphors, absorpt., rel. to Cu conc. 5=3583
    - polarized light 9=7960
    - transmission, polarization effects 9=13160
  - ZnTe—CdTe, transmission spectra 9=3486
- inorganic solids, infrared
  - absorption, review 6=8771
  - crystals (e.g. $NaNO_3$), rel. to Raman 5=3584
  - lattice absorpt. in ionic and homopolar crystals 5=2301
  - metals and semicond., absorption, electron band structure 8=7491
  - widths of absorpt. bands 6=8675
  - B_4O_6, i.r., isotopic effect and molec. structure 8=2967-8
  - $BaCO_3$ crystals, i.r. absorpt. 5=8965
  - $Ba(NO_3)_2$, i.r. transmission 8=3448
  - $BaTiO_3$ 5=1693
    - pressed-powder method 8=6845
    - transmission, 0.2-23μ 9=7961
  - BrCN 6=1979
  - CaF_2:Ce, absorption of Ce^{3+} 9=10785
  - $Ca(OH)_2$, spectrum, 3000-4200cm^{-1} 8=6846
  - Ca $(SiO\ OH)_2.2H_2O$, rel. to H positions 6=8102
  - calcite, emission 7=8513
    - 1-15μ, up to 30 000 atm. 9=13168
  - CdS, far i.r. absorption 9=4452
  - CdSe, far i.r. absorption 9=4452
  - CdTe, far i.r. absorption 9=4452
  - ClCN 6=1979
  - cristobalite, i.r. absorption 9=12047
  - CsBr, thin films, in reson. vibration region 9=12050
  - $CuCl_2.2H_2O$ 6=1455

- Spectra - contd
  - inorganic solids, infrared - contd
    - Cu_2O films 9=12048
    - D_2O, in solid A, Kr and Xe, absorption 9=5529
    - diamond, intrinsic absorption 9=6226
      - IIb type, absorption 7=4334
    - ferrites 6=231
      - four, far i.r. absorption and transmission 9=4453
    - GaAs, n-type, absorption 9=6948
    - Ge, absorption 9=8788
      - absorpt. by carriers 5=4653
      - absorption by conduction electrons, theory 9=5543
      - absorpt. near lattice edge 5=4654
      - emission, electromagnetophoto effect 9=9618
      - far i.r. emission 7=4337
      - GpV donors in Ge, absorption 9=5534
      - p—n junction, absorption 7=5340
    - GeO_2, absorption 9=7952
    - Ge—Si alloys, absorption 8=8687
    - glass, borosilicate, porous, transmission 9=12065
      - reflection, rel. to struct. 7=250
    - gypsum, absorption 6=8678
      - crystal structure det. by i.r. 6=8103
    - H, absorption 5=6005
      - double transitions in 7=7748
      - 4100-5500cm^{-1} 9=6725
      - ortho-para mixtures, absorption 6=229
    - HBr and HCl, crystalline 5=5320
    - HCl—HBr mixed crystals 8=1609
    - HDO in solid A, Kr and Xe, absorption 9=5529
    - HI, crystalline 5=5320
    - H_2O in solid A, Kr and Xe, absorption 9=5529
    - ICN 6=1979
    - ice, hexagonal and cubic 8=5781
    - InP, transmission 8=1691
    - InSb, absorption 5=6134; 6=7415
    - $KAg(CN)_2$, polarized i.r. 6=8677
    - KBr, absorption 8=7828
    - KCNS, polarized i.r. 8=8690
    - $K_3Cu(CN)_4$ 8=9081
    - KNO_3 crystals, absorption 5=8965
    - K_2SO_4 6=1110
    - $La(OD)_3$, $La(OH)_3$, absorption 9=10401
    - LiF, near absorption 9=9437
    - Li_2SO_4 6=1110
    - $Li_2SO_4.H_2O$, study of OH 5=6919
    - $Mg(OH)_2$ (brucite), absorption 9=3292
      - rel. to crystal structure 6=7294
    - mica, absorption 9=12049
    - NH_4N_3 5=8620
    - N_2O 7=5188
    - N_2O_4 films 7=5189
    - NaCl, absorption 8=7828
    - oxonium halides, frozen-in disorder 5=8619
    - quartz, absorption 8=4879, 5782; 9=12047
      - transmission 9=9438
    - Rochelle salt 6=4318
    - SO_2 film 6=8676
    - Si, absorption 9=8788
      - absorption by carriers 5=4653
      - absorption, lattice imperfections 9=5534
      - absorption lines, excited donor level interpret. 5=4661
      - absorption, 1-45μ, by free carriers 8=3122
      - As-doped, i.r. absorption 9=3289
      - Bi-doped, absorption 9=7966
      - effect of neutron irrad. 8=4878
      - irradiated, absorption, energy levels 9=10279
      - neutron irradiated, absorption 9=6731
      - O_2 bands 8=2326
      - O_2 impurity in, 15 i.r. absorption bands 9=8801
      - plastically deformed, band. 8=8439
    - SiC, cubic, 1-15μ 9=4450
      - hexagonal, 1-25μ 9=4449
    - SiO_2, crystals, absorption 6=1981
      - sharp line absorption in 7=2033
      - vitreous, 2.72μ absorption, due to OH group 5=179
      - transmission 9=9438
    - $SrTiO_3$ 5=1693
    - Te, absorption, hole zone structure 9=8861
    - TiO_2, absorption 9=5537
      - electronic absorption bands 9=6732
    - ZnO absorption, Cu and In-doped 9=8995

- Spectra - contd

    - anisoles, substituted, direction of halogen spectroscopic moments 9=10184

Spectra - contd
  organic molecules and substances - contd
    anthracene 7=9075
      absorption band 6=1106
      absorption edge 8=3865
      absorption and fluorescence 9=5147
      absorpt. to 2^0K 5=3585
      effect of mech. deformation 7=9613
      electronic and vibrational states 6=7579
      intense u.v. absorpt. systems assignment 5=178
      polarized, Davydor splitting 6=223
      polarized u.v. absorpt. 5=5322
      near u.v. and visible absorption, rel. to pressure 9=7957
    anthracene—phenanthrene mixed crystals 7=5182
    asphaltene 9=10775
    azo dyes, photoisomerization meas. 7=9947
    benzal radicals 5=8604
    benzanthracene, near u.v. and visible absorption, rel. to pressure 9=7957
    benzene and derivatives, absorption at 20^0K 7=9080
      and benzene-d_6, vac. u.v. 6=196, 4993, 5772
      in complex state 9=12030
      and deutero-benzene, absorption 9=2923
      dichlorobenzene, o- and p-, near u.v. absorpt. 5=6011
      in diluent gases, high-pressure effects 9=3285
      p-dimethoxy-cryst., rel. to benzene 5=8612
      effect of inert gases 7=7001
      effect of mech. deformation 7=9613
      fluorobromobenzenes, u.v. 7=5992
      hexamethylbenzene, absorption, polarized light, low temp. 9=6358
      hexamethylbenzene, near u.v. 7=3140
      hexamethylbenzene, at low temp. phase change 9=198
      hexamethylbenzene, u.v. 5=6916
      homologues 7=6995
      liq., rel. to temp. and press. 6=1057, 6522
      low temp. absorpt., far u.v. 5=2595
      meta-fluorochlorobenzene 7=244
      N-hetrocyclics, π-electron spectra 9=13747
      in n-hexane, pressure effect on u.v. absorption 6=1974
      near u.v. emission, Fermi reson. 5=5990
      near u.v., press. perturbation 5=7851
      nitrobenzene, u.v. absorpt. 5=183
      oscillator strengths, vac. u.v. 5=6009
      p-disubstituted rel. to o-, m- ditto 6=8099
      para-fluorochlorobenzene 7=245
      phase changes and spectral shift 8=8684
      pure liq., and soln. in iso-octane 6=1050
      Rydberg series, calc. 9=190
      Rydberg spectrum calc. 7=3483
      in solution, wavelength shifts 8=9090
      substituted, M.O. calc. 8=1290
      substituted u.v. 6=1058
      1,2,4,5-tetrachlorobenzene vapour, u.v., substituted
      3400 absorption band intensity 9=2208 [6=4309
      1,3,5-trichlorobenzene, u.v. 9=7954
      1,2,4-trifluorobenzene 7=7735
      u.v. absorption, effect of press. 7=5178
      vacuum u.v., absorpt. coeff. 8=6832
      vapours, u.v. correlation with electric strength 9=8184
      vibration calc. 5=1087
    benzoic acids, substituted, u.v. absorpt. 6=1976
    benzotriazine and derivatives 7=4148
    benzyl radicals 5=8604, 8968
    bianthrone, identity of green form 9=8755
    bicycloheptane, bicycloheptene, vac. u.v. 5=2596
    butadiene, Rydberg spectrum 7=2019
    n-butyl alcohol, vacuum u.v., absorpt. coeff. 8=6833
    CCl_4, u.v. emission 6=4297
    CD_3 radicals, free, vac. u.v. 6=6520
    CF_2Cl_2, u.v. emission 6=4297
    CH, band system intensity 5=6894
      $^2\Delta - {}^2\Pi$ system (0,1) and (1,2) bands anal. 6=5766
    CH_3 radicals, free, vac. u.v. 6=6520
    carbonium ions, electronic spectra 8=373
    chloroanisole, liq. and solid, u.v. absorption 9=12037
    chlorocyclopropane, u.v. absorption 8=6836
    chloroform-D, bonding, i.r. study 5=4853
    α-chloronaphthalene in ethyl iodide, pressure effect 9=1281
    o-chlorophenol, spectra at different temps. 9=3284
    o-, m- and p-chlorotoluene soln. 6=8098
    cinnoline, u.v. 8=2958

  - i.r., rock-salt cell 9=9416
  - i.r., variable thickness cell 7=1173
  - i.r., wide-range cell 8=4869
  - for liquefied gas absorpt. spectra 6=1057
  - for low temp. 8=964
  - 100 ft. cell, ratio recording system 7=6769
  - optimum design for maximum contrast 9=5515
  - quartz cells for use with spectrophotometer 9=4437
  - for v. high pressure 8=937
  - for v. low temp. 5=7837
- chopper/disk bolometer recorder for i.r. 9=179
- for circular dichroism and rotary dispersion meas. 7=4161
- curettes for micro-organism and living tissue studies 6=1957
- double-beam method of line selection, flames 5=5303
- double mirror, for exact imaging of light source 9=1261
- electrode holder for porous cup tech. 8=7796
- electron multiplier adaptation to plate spectrograph 7=228
- feed-back resonance amplifier for i.r. 5=2562
- frequency-linear drive for recorder 7=229
- furnace and cryostat for i.r. spectrograph 5=4506
- glass Dewar flasks, for low temp. studies 8=6926
- for high-pressure studies 7=5980
  - absorption spectra 6=7282
- high-speed camera as, spectrograph attachment 8=5765
- i.r., high-pressure windows 6=7381
  - horizontal sample arrangement 8=8685
  - intensity meas. device 7=2016
  - modulator 6=8087
  - modulator, theory 8=6800
  - photoconductive detectors 6=1041
  - reflecting microscope 5=4578
- illumination by volume radiation 5=9543
- instrumentation in far i.r. 6=1051, 8663
- integrating exposure meter, for stellar spectrograph 8=6576
- intensimeter, semiautomatic 6=7264
- light condenser, superposition-type 5=3556
- for meas. i.r. reflectance of metal films 8=1625
- for meas. i.r. transmittance of flat plates 5=8590
- mechanical slit control for recording i.r. instr. 7-2015
- mirror condenser 5=5977
- off-plane Eagle mounting, application of concave grating theory 9=6793

Spectrometers - contd
 accessories - contd
  PbTe detectors for i.r. 5=4673
  photoelec. det. of Raman spectra 7=7019
  photoelec. switch for double-beam instruments 5=6067
  pulse counting photometer for microspectroscopy 6=2774
  for Raman spectrometers, improvements 6=8120-1
  receivers for far i.r. grating spectrometers 7=6981
  reflecting objective for microspectroscopy 5=8681
  reflection image reducer 6=6505
  rotatable concave grating, for vacuum u.v. monochromator, theory 9=4426
  rotating mirror for c.r.t. presentation of spectra 9=4423
  rotating step-sector for intermittent light sources 6=176
  for safe interchange of large lens and prism mounts 7=9062
  sample holder for reflection meas. 5=7824
  semiautomatic app. for wavelength and intensity meas. [6=4983
  series attachments, e.g. polarizer 5=3554
  for 6000 atm pressure 7=2014
  slit, for interposing spectra on echellegrams 5=4511
   large optical slit 6=4292
   new type 6=1036
   slit drive, for i.r. single beam 6=1955
  spectrum comparator 7=9063
  Tl-lamp photometer for solar corona 5=5164
  wide-aperture mirror objectives for i.r. 5=5972
Spectrometers, microwave
  absorption coeff. meas. method 5=845
  cavity, frequency standard, theory 9=7950

  - Fe—Al—Cr and Cu—Ni alloys, with special characteristics

- Thermocouples - contd
  - FeS—solid tungsten, molten 8=197
  - Ir—Re system, applications 6=2838
  - Ni—Mo, calibration 5=258
  - PbTe, use for refrigeration 7=3307
  - Th—Pt 6=5896
- Thermodynamic properties (See also Critical constants, thermal; Entropy; Heat capacity; Heat of reaction; Latent heat; Thermal transformations).
  - antiferromagnets, effect of anisotropy 5=1045
  - binary mixtures of rigid spheres 5=2492
  - calc. from Thomas—Fermi atom model 6=575
  - charged particles system, free energy 9=13036
  - compilation of substances and systems, recent data
  - crystals, anharmonicity effects 9=8795 [9=12193
    - with defects, free energy 9=13774
  - dil. solutions of macromolecules 5=2477 [9=8798
  - disordered isotopic lattices, perturbation-type expansion
  - ferromag. low-temp. theory, spin-wave interactions
  - fluid in equilib. with external field 6=3697 [6=5998-9
  - free energy, charged—particle systems 8=2371
    - classical plasma 8=1074
    - functions for gaseous atoms 5=6812
    - functions of 54 gaseous elements 8=1557
    - isotopic mixtures 7=3567
    - liquids, lattice cell theory 6=6421
  - functions, mixture of rigid spheres 6=1901
  - gas hydrates 8=3056
  - gases, imperfect effect of successive virial coeff. 8=3787
    - mixtures, at high temp., cluster theory 9=5640
    - supersonic flow, total enthalpy 9=10687
    - 23 diatomic and triatomic gases, empirical formulae
  - isotope effects on hindered rotators 7=9778 [9=271
  - isotopic mixtures 9=3409
    - theory 5=913
  - isotopic molecules, statistical mechanics 6=942
  - metals, oscillations due to external pressure 9=2917
    - shock adiabatic 9=13093
  - mixtures of electrolytes in aq. soln. 5=1323
  - molecules, additivity rules 8=9104
    - with internal rotation 6=7583; 8=6373
    - polyatomic, formulae 6=6578
  - partial functions, of rigid symmetrical top 9=13744
  - polymers 7=5711-13
    - networks, elastic free energy, stress—strain isotherm
    - solutions, rel. to virial coefficients 7=1960 [9=13842
  - quantum solids at abs. zero 5=2691
  - in shock transitions 7=4292
  - solid solutions, det. by radioactive tracers 6=716
    - radio-isotope studies 9=8889
  - solids, non-linear relaxation theory 8 =4431
  - substitute pressure in isothermal processes 7=2149
  - systems containing polymeric ions 7=3056
  - thermoelastic waves in liquids 6=7180
  - Thomas—Fermi atom, low temp. 5=1127
  - values to 12000^{0}K 5=7927
  - at very high pressures 8=1666
  - air, in dissociative and ionic equilibrium 9=5642
    - moist 5=1786
    - up to 1200 atm 5=3703
  - Al, enthalpy, at 850 and 1227^{0}C 7=6130
  - α-Al$_2$O$_3$(corundum), enthalpy and free energy 7=7834
  - alcohol—hydrocarbon mixtures 5=263
  - alkali halides, gaseous 8=914
  - alkali metals 6=3699
  - Ar, at high pressures 9=3407
    - at 0^{0}K 9=2895
    - -100 to + 600^{0}C, 0 to 80 atm. 5=4611
    - up to 1000^{0}C and 72000 atm. 8=3925
    - solid 8=1074, 8411
  - Ar—CH$_4$ liq. mixtures 9=4537
  - Au$_{\frac{1}{2}}$Cu$_{\frac{1}{2}}$ 9=9575
  - B, B$_2$, BH, BO, B$_2$O$_2$, gaseous, 0-6000^{0}K, calc. 9=10937
  - BrF$_3$ 8=3870
  - t- butanol—water, temp. dependence 9=12194
  - C compds, 1000-50000^{0}K 9=12195
  - CCl and CCl$_4$, 298.16^0 - 6000^{0}K 9=2289
  - CD$_3$Br 5=5557
  - CDBrCl$_2$ 5=6015
  - CDBrF$_2$, calc. 5=5556
  - CD$_2$F$_2$ 7=2484
  - C—H compounds, 1000-50000^{0}K 9=12195

Thermodynamic properties - contd
  CH_3Br 5=5557
  cis- and trans- $C_2H_2Br_2$ and $C_2D_2Br_2$ 7=5192
  $CHBrCl_2$ 5=6015
  $CHBrF_2$, calc. 5=5556
  CH_2DBr, CHD_2Br, calc. 5=5555
  $CHDF_2$ 7=2484
  CH_2F_2 7=2484
  $CHFBr_2$, calc. 5=5558
  t-$C_2F_2Cl_2$, gas 7=5197
  Cl_2CO 8=2635
  CLF_3 8=3870
  Cr carbonyls, gaseous 6=1982
  $CrCl_3$ and CrF_3 8=3958
  Cu—Ni alloys 9=12196
  Cu—Pd alloys, from electrochem. e.m.f. 9=12197
  cyanogen 6=2843
  cyclobutene 8=3055
  DNO_3, gaseous, barrier height torsional contrib. 5=9619
  2-dibromoethylene 9=3976
  1,1-difluoro-2 9=3976
  1,1-difluoro-2-chloro-2-bromoethylene 9=3294
  dimethylether, calc. from i.r. absorpt. data 5=421
  ethyl cyanide, from spectroscopic data 5=4838
  Er 6=1177
  F and its compounds 7=4293
  F_2CO, FClCO 5=2050
  Fe, components of thermodynamic functions 6=5827
  Fe_3Al, order—disorder transitions 9=8891
  Fe—Co alloys 9=12196
  FeS and $Fe_{0.877}S$, 5-350°K 9=5639
  Fe tellurides 9=6854
  fluorinated ethanes 8=121-2
  fluorinated ethylenes 7=7750, 9086
    fluorochloroethylene 6=233
    fluorotrichloroethylene, thermodynam. functions 6=234
  Freon—12, isothermal and isentropic exponents 9=3410
  GeI_4 molecule, thermodyn. functions 8=1289
  H, plasma, degenerate ionized 9=9732
    1000-50000°K 9=12195
    p-H_2 and O-H_2 mixtures, in solid and liquid phase, statistical model 9=8060
  $H_2 + D_2 \rightleftharpoons 2\,HD$ 7=813
  HN_3 5=7852
  HNO_3, gaseous, barrier height torsional contrib. 5=9619
  HNO_3—H_2O and HNO_3—N_2O_4 systems 9=1392
  halogenated methyl cyanides 7=9147
  He, enthalpy 8=5855
    liquid, cell-model treatment 5=4592-3
    liquid, rel. to reversible flow phenomena 6=6565
    solid, review 8=9105
    superfluid films 8=1657
  He^3 9=6849
    liquid, below 1°K 7=6117
    liquid, spec. ht. and entropy 5=6987
  He^3—He^4 mixtures, calc. from vapour pressure data 7=8561
  Ho 7=8572
  ice, surface free energy 7=7650
  In, molten 8=1550
  inert-gas crystals 8=1304
  KCNO 9=6857
  KCr alum 7=8716
  Kr, adsorbed on TiO_2 6=303
    at 0°K 9=2895
  LiF, 0°-900°C 5=1784
  methanes, substituted 9=730
  methane—carbon monoxide at 90.67°K 5=9468
  methanol, thermodynam. functions calc. 6=1427
  methyl isocyanide 7=253
  methyltrifluorosilane, calc. 5=2603
  Mn, allotropic modifications 8=5853
  Mo carbonyls, gaseous 6=1982
  N_2, enthalpy and dissociation energy 9=3412
    up to 1000°C and 100 atm 8=3925
    solid, at melting 7=4272
    u.s. propagation study 9=3226
  NF_3, 12°K to b.pt. 5=4610
  Na amide, and amide ion in liq. NH_3, enthalpy, 15-300°K
  NaCNO 9=6857 [9=10934
  Na—Cd system 7=4021
  $NaNO_3$, enthalpy and molec. heat 8=3956
  naphthalene 5=2946

Thermodynamic properties - contd
  Ne 8=6913
    at 0°K 9=2895
    $Ne^{20,22}$ solid, free energies 8=1649
  Ni—Cr—Fe alloys, enthalpy 9=2290
  NiF_2 5=7921
  Ni tellurides 8=8740
    nonstoichiometri 9=5637
  O and S hydrides, free radicals 5=6997
  O_3 5=4426
  iso-octane-perfluoroheptane 7=4022
  Pb, molten 8=1550
    298-1200°K 5=1783
  PuF_6, from i.r. data 6=1067
  pyrrolidine 9=12198
  Rochelle salt, thermodyn. potential 8=4937
  rubber, adiabatic deformations 9=8934
  SOF_2 5=7844
  Sb—Bi, heats of mixing, ξ-function, 700°C 9=13238
  SiC, heat of sublimation 9=5638
  SiH_3Br and SiH_2Br_2, between 275 and 1200°K 5=8617
  silane thermodynam. functions calc. 5=6352
  Sn, molten 8=1550
    0.15-4°K, free energy 8=3923
  steam superheated, state diagram 9=1395
  $TiCl_4$ 5=9798
  $TiCl_3 + HCl \rightleftharpoons TiCl_4 + \frac{1}{2} H_2$, enthalpy 6=9009
  trichloroethane 7=7838
  transition metal cpds., interpret. 6=8456
  β-UH_3, 5-350°K 9=12189
  UO_2, high temp. 7=3220
  V sulphide and selenide 9=11226
  V—O system 8=1298
  vinylidene chloride, solid, liquid and ideal gas 9=6861
  water, enthalpy—entropy diag., 600-800°C and 300-2000b 9=3411
    isotopic molecules, machine calc. 5=2977, 6997
  Xe, low-press. isotherms 5=9486
    at 0°K 9=2895
    up to 2800 atm. 6=3700
  ZnF_2 6=301
  Zn ferrites 9=9568
  ZnLi ferrites 9=9568
  Zr, enthalpy 9=2291
    gaseous 6=3698
  ZrH_2, enthalpy 9=2291
Thermodynamics (See also Atmosphere, thermodynamics; Entropy; Equations of state).
  adiabatic processes in ionized gases at high temp. 6=7494
  bodies in static e.m. fields 6=8749
  Bose—Einstein gas, canonical ensemble 8=58
    in gravitational field 8=57
  calculations of transforms, systematic approach 9=6856
  coupling between "isolated" systems 6=7361
  critical points, and Born—Green eqn. 7=3221
    restriction of term 6=4364 [8=3054
  definition of energy and its conservation correlation
  density expansions of distribution functions 7=8577-8
  derivation of adiabatic gas laws 6=4374
  energy rel. to intensive and extensive parameters 5=2690
  energy-momentum tensor generalization for thermodynam. term 5=4342
  enthalpy and free energy of gas 8=6932
  equilibrium states, cartographical concept. 9=4536
    below 0°K 9=13240
    in isolated system, persistence 9=66
  equivalence of retarded action and increasing entropy
  expression for work 5=4612 [6=3701
  external reaction fluctuations 7=6140
  first law for continuous moving medium 7=6141
  fluctuations in non-equilib. stationary systems 5=5384
  fluctuation-dissipation theorem, derivation 8=1540
  foundations, geometrization 7=7076
  free energy, extreme prop. of sum-over-states 8=8601
    of nonuniform system 9=6858
  generalization of Ehrenfest urn model 6=5599
  Gibb's eq. appl. to ionized substances 5=7926
  high-temp. expansion for partition function, rigid free rotator 5=264
  homogeneity condition 6=1181
  hysteresis, independent domain model, formal treatment
  inhomogeneous systems 9=4538, 6859 [5=1557

Thermodynamics - contd
- irreversible processes 9=9574
  - Boltzmann equation 6=7363; 7=120
  - differential eqn. system, property of integrals 5=1788
  - entropy and Riemann spaces 5=3702
  - entropy prod. in stationary state 5=9621

X-ray spectra - contd
emission - contd
Mo, due to protons 7=7945
excited by α-particles 8=5037
Mo^{42} 9=11170
N, π-mesonic, K-series 5=8805
Nb, effect of binding in NbC and Nb$_2$C 5=4829
Ne, K-series 5=8804; 9=5780
Ni, excited by α-particles 8=5037
fluorescent yields 7=4425
L-spectrum 8=633
proton-excited 5=4708
Np, L-energy 6=2149
O, π-mesonic, K-series 5=8805
Os^{187}, L spectrum 5=1143
Pb, β-ray excited 5=5436
fluorescent yields 7=4425
L intensities, comparison for 2 excit. methods 6=3767
μ-mesonic atoms 6=392
Pd, L-spectrum 8=1083
Po^{210}, K and L series 7=3341
Pt, in betatron, continuous spectrum 9=2382-3
K-lines, from walls of Ra container 7=4421
Pu, L-energy 6=2149
L-transitions 8=8804
rare earths, L-spectra 5=7091-2
method 7=8652
10, K-series 9=5777
S, in CdS 8=8018
in metal sulphides, Kα doublet 6=2146
Si, effect of alloying in binary alloys 5=1879
soft X-rays 7=2286
Sn, fluorescent yield 7=4430
Tc, fluorescent K series 6=2147
Ti, in carbides, rel. to C content 8=3164
fluorescent yield 8=7340
Kα applic. to film thickness meas. 9=13047
Kβ-series, rel. to chem. bond 7=9228
in titanates 8=2350
Tl, L-fluorescence yield from Th(B-C-C^{11})decay 9=6067
Tm^{170}, K and L X-rays 6=6112
U, L-transitions 8=8804
V, K-series fluorescence yields 9=5780
W, K-series, curved-crystal meas. 5=314 [9=4671
structure of soft x-ray edge at const. wavelengths
Xe pulse discharges 8=2351
Yb, 52 keV 8=3383
Zn, fluorescent yields 7=4425
proton-excited 5=4708
X-ray spectrometers (See also Gamma-ray spectrometers; X-ray crystallography, apparatus).
bent-crystal 7=4424; 8=7072
crystal holder 9=4669
crystal reflectivity 8=4052
Du Mond, for precision meas. 20-350 MeV 9=5773
fluorescence spectrograph, with photogr. recording
for soft X-rays 8=4051 [9=2387
test for resolving power 9=5775
focusing, for atomic physics course 6=391
for ore analysis 6=3347
coincidence apparatus for low energies 7=3343
crystal orientation det. 9=10369
curved grating and G.M. counter (20-100A) 8=7073
electron beam probe 8=4466
fluorescence spectrometer, effect of temp. var. on optical alignment 9=2389
Ge crystals, suggested use 9=8989
grazing incidence, for photon-counting, 50-100A 9=5774
NaI crystal, response to 10-20 MeV electrons and X-rays
total-absorption type, response functions 9=4880 [6=8226
proportional counter, pulse size statist. spread 6=2957
ruled-grating, for soft X-rays 5=6195
for soft X-rays 5=3813
using electron multiplier 9=2386
for study of surface layers 7=6670
two-crystal type, continually-aligned 9=930
many-particle cooperative scatt. 9=13356
resolving power rel. to line width 5=977
2.5 m, focusing, transmitting type 5=6193
X-ray spectroscopy (See also X-ray crystallography; X-ray diffraction).
absorption, improved meas. apparatus 9=4667
X-ray spectroscopy - contd
continuous spectra, meas. with scint. spectrometer 6=8815; 7=666
scintillation method, resolution corrections 9=2388
detectors, absorption and counting efficiency 5=6196
electronic band structure study, review 9=12783
emission, electron excitation of elements Be to U 5=5697
using ion exchange membranes 5=8807
fluorescent, in chemical element analysis 8=3494
line spectra, analysis of unresolved proportional counter curves 9=2385
line widths det. crystal spectrometer, effects of imperfections 5-1880
monitor for stabilizing X-ray beam intensity 9=13354
optical (analogy) diffractometer for macromolecular studies 8=6511
review 9=3542
scintillation, of soft X-rays 6=5914
solid-state, appl. to KCl 5=3921
spectrometer crystal absorpt., edge perturbations 6=2913
X-ray tubes
adjustable focus, 20-70μ 9=12339
anticathode, input limit 9=3545
for contact microradiography 7=1821
for crystallography, progress review 6=7824
cylindrical-anode type, 5 kW, for sterilizing food and drugs 9=13353
rotating anode, input power limit 9=9684
demountable, rotating anode, for crystallography 7=874
electron focusing, vacuum effects 9=5805
fine-focus tubes 6=2159
for absorption microanalysis 9=915
electron gun 9=929
for multiple reflection studies 9=7614
100μ dia., with adsorption pump 9=9685
optics and design for sharp focus 6=5131
for shadow microscopy 5=984
flash tubes 7=9711
microsecond type, for diffraction studies 6=7452
high-vacuum pulsed tubes, discharges 6=8224
impulse, synthetic insulator, double anode 6=5137
intensity of fluorescence radiation 9=8194
for microradiography 6=1279
pulse circuit for cloud chamber meas. 5=6245
rotating-anode type 9=8193
water-cooled, for fine-structure 8=7076
for shock-wave studies by flash radiography 8=8647
soln. of ray eqn. for focusing 5=8819
with space-charge grid, for microscopy 7=9710
spectra, intensity 5=7093
X-ray intensities at low voltages 7=2285
X-rays
ang. correl. in X-ray and optical cascades 6=3163
beam quality, from 2MVP generator 7=441
point focusing 5=9257
differential filters 6=2156
diffusion coeff. of alloys, det. method 7=4796
appl. to electron beam radial distrib. meas. 5=9700
emission, from aurorae 8=6560
in B-1 stellarator 9=2374
by dielectrics in strong elec. fields 7=4305
on electron capture and internal conv., polarization and ang. distrib. 8=9032
on electron capture, X-ray polarization 8=5317
by electrons, in pulsed discharge 9=7015
by electrons in synchrotron 8=3186
in gas-discharge thermonuclear expt. 6=3974
by heavy ions, of characteristic K X-rays 9=4664
by ion clouds striking earth 8=1380
in linear accelerators 9=12340
in linear plasma 9=5831
in pinched discharge (Zeta) 8=773
due to proton bombardment 7=3376 [9=3706
pulsed source, using electron linear accelerator
in Scylla plasma, mag.-compressed 9=12342
from solar corona and hot coronal condensations
during solar flares 7=6827; 8=15, 4668 [6=6315
in sputtering by ions 7=2340
on starting gas discharge 7=427
by synchrotron orbit-radiation 9=8192 [9=12341
target, water-cooled, for Van de Graaf generator
energies, all elements, table 5=5434

X-rays - contd
- fluorescence yield of heavy atoms 8=9068
- high altitude, during magnetic storm, Aug. 1957 9=4146
- high-resolution X-ray projection microscopy 6=2916
- image converter using television tube 6=7451
- itensification and resolution improvement by screens 5=6190
- intensity in the soft X-ray region 7=2285
- interference, divergent beams on thin films 8=8805
  - fringes, meas. with CdS detector 8=7603
- low-energy sources, β-ray excited 5=5436
- π^- -meson mass from mesonic X-rays 5=545
- polarization rel. to β-interaction and nuclear levels 7=7348

  metals, grain growth 9=8999
  Peltier heating in semiconductors 6=7434
  refractory metals, by electron bombardment 7=7527
  rod-shaped crystal production 9=10487
  single crystal production 9=12861
  theory 7= 526; 9=920
  ultimate impurity distribution 8=2084-5
  B 9=10359
  GaAs 9=8993
  GaS 6=347
  Ge 6=3420
    production 6=3420
    zone melting and crystal pulling 6=9029
  InP 6=347
  InSb, role of refining 7=8968
  Si, apparatus 7=8345
    floating zone method of crystal growth 5=4174
  Ti, cage zone refining 5=5077
  U 7=990
    fission product removal 6=8543
Zoology
  animal tissue, viscoelastic props. 7=4921
  cats, auditory cortex 9=6423, 10476
    hearing 8=9188
    middle ear muscles, action 9=6422
  domestic and wildfowl, acoustic irritation 8=1384-5
  frog, sciatic nerve, metabolism 9=11675
  frogs' ears and hearing, model studies 8=1383
  guinea pigs, cochlea, action potentials 9=7713
    hearing 9=4181
    hearing, effects of hypoxia 9=1968
  newts, cellular responses 9=10437
  porpoises, hearing, underwater 9=4159
  tonal memory research 8=4601
  Xenopus larvae, hydrostatic balancing mechanism 9=13975

PHYSICS ABSTRACTS CUMULATIVE INDEX 1955-59

ERRATA

Acoustic wave propagation
- relaxation, Ni—Fe ferrites 5=2230
  - rubber and Perspex solutions 5=3517
  - pressure effect in gas motion 5=793

Acoustics, musical
- equal-beating chromatic scale 7=7692

Atmosphere
- radiation belt, at 3-6 earth radii, origin 9=12902

Barium compounds
- (Ba,Pb)TiO$_3$, X-ray study 5=4122

Biology
- tobacco mosaic virus, mag. birefringence 5=8373
  - solution polydispersity 6=1141

Chemical structure
- consequences of intramolec. attractive forces 6=2518
- 1,2-dichloroethane gauche form, evidnece 5=426

Dielectric phenomena
- relaxation, in dipolar organic crystals 5=7015

Elastic relaxation
- microstresses, nonorientated 9=5209
- stresss—strain relations, thermodynamics 5=2246

Electrochemistry
- pH, influence on radiation-chem. effects, interpret. 5=2280
  - rain, effect of H bombs? 6=1610
  - separation of proteins in pH field and elec. field 5=588
  - water in γ-radn. source storage well 5=500

Electron emission
- exo-electrons, from metals 5=6204
- field emission, metals 8=5049

Fibres
- wool, relax. of fibres in water 5=6554

Flares, solar
- correl. with absorption of cosmic r.f. noise 5=692
- correl. with anomalously polarized twilight emission 7=7520
- correl with cosmic rays 5=7172; 6=2985, 8267; 7=1025, 8692
- effect on ionosphere 6=5557
- effect on ionosphere and earth's mag. field 5=9291
- effect on ionosphere and mag. storms 5=6642
- emission of high-energy particles 7=1860
- height analysis 5=4300
- height and assoc. with SID's 5=4301
- initial "acceleration" and "deceleration" 7=55-6
- model 7=5482
- observations, accuracy 7=35
- radioemission 7=6823
- and solar atmospheric heating 7=1861
- survey 7=3914
- X-ray emission 7=6827
- X-ray and u.v. emission 9=10
- 1955, June, flares of sunspot group 7=32
- 23 Feb. 1956 7=7558
  - cosmic ray obs. 6=5199, 5990-2, 6752, 6759-60, 7506, 8271, 8514; 7=513, 514—15, 2381, 2387

Flares, solar - contd
- 23 Feb. 1956, geophysical results 7=8307
  - Greenwich obs. 6=8557
  - ionosphere effects 7=3857

High-pressure phenomena effects
- v. high press. generation 6=5467

Instruments
- scales, enlargement and reduction in one dimension 5=3375
  - linear, made by means of Merton nut 5=1564
  - linear, photoelec. comparator 6=8013

Iron compounds
- FeS$_2$ (pyrite), natural crystals, elec. props. 5=950

Medical science
- heart, cine densigraphy appl. 5=7592
- radiotherapy, dose-rate distrib. across tube 6=8540
  - electron filter for Co^{60} beam 5=7584
  - high-energy X-ray energy dissipation, spatial distrib. 5=978
  - introduction of the rad, 7=984
  - rotation, dosage det. in horizontal plane 5=1421
  - use of Co^{60} 5=4262

Meteology
- dynamic surface-pressure changes 5=5145

Neutrons and antineutrons
- scattering, proton—neutron
  - elastic, cross-sections for 5-35^{0}, 590 MeV 9=13555

Nuclear magnetic resonance and relaxation
- fluids, nuclear reson. and molec. motion 5=2469
- quadrupole nuclear relaxation 5=2300
- spin echoes, in crystals 5=9245
  - with n pulses 5=5739
  - and quadrupole interact. crystals 5=5738
- spin—lattice relaxation time, Al^{27} in Al and Cu^{63} in Cu 5=7257
  - alkali metals 5=6336, 7227
  - effect of translational diffusion 5=3256, 5665
  - LiBr, AgBr, TlBr 5=2952
  - proton, liquids, streaming method 5=4420
  - rel. to proton reson. absorption 5=1055
  - semiconductors 5=3739
  - Si^{29} in silica 5=6303
  - rel. to transition probabilities 5=9835

Nuclear physics
- electronic instrumentation, survey 6=3911
- high-energy, conferences 6=8951
- information about CERN 5=9817

Organic compounds
- wool, relax. of fibres in water 5=6554

Paramagnetic resonance and relaxation
- semiconductors, relaxation time, spin—orbit coupling allowance 5=289
- spin—lattice coupling, ions in crystals, review 5=8907
- spin—lattice relaxation, conduction electrons 5=6300

Photoelectricity
- emission, extreme u.v. 5=1838
